

Supplementary Material

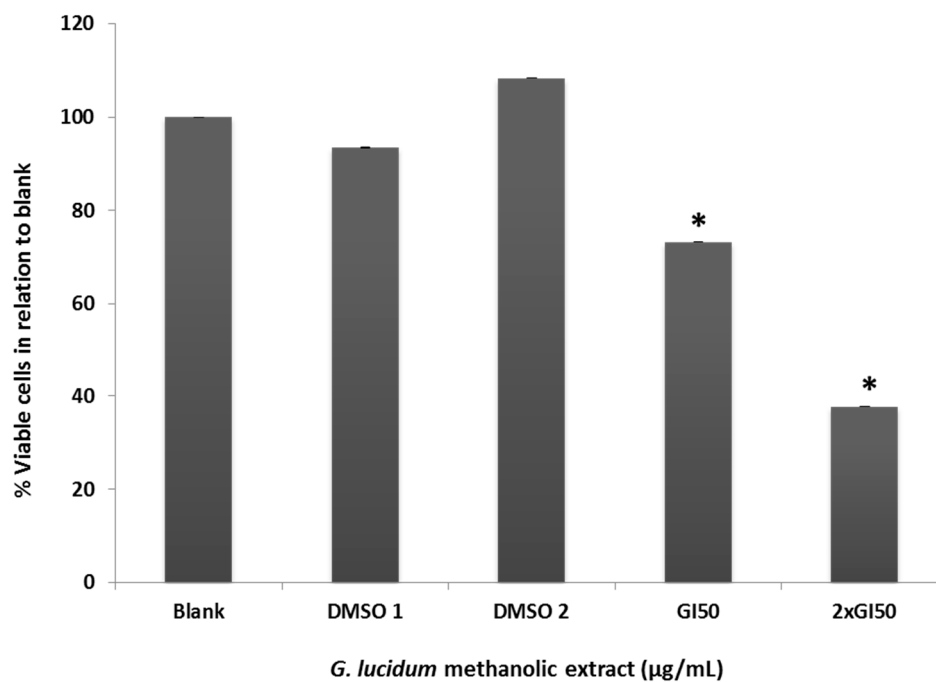

Figure S1. Effect of *G. lucidum* methanolic extract on AGS viable cell number. Results were analysed 48 h after incubation with medium only (Blank), with the methanolic extract (at GI₅₀ and 2 × GI₅₀ concentrations) or the corresponding volumes of the extract solvent (DMSO). Results are presented as a percentage of viable cells in relation to blank cells and are the mean ± SE of six independent experiments. * $p < 0.05$ blank vs. treatment.
