Note: This Supporting information provides the original data of **Table 1** in the main text. All data underline are mentioned in Table 1 in the main text.

1. Fe^{3+} -reducing power assay

Figure S1: The dose response curves of echinatin and licochalcone A in Fe^{3+} -reducing power assay. Each value is expressed as mean \pm SD (n = 3).

Tab. S1 The comparison of IC_{50} values of echinatin and licochalcone A and positive control in Fe^{3+} -reducing power assay.

	Mean \pm SD $\mu\text{g/mL}$	Mean \pm SD μM
echinatin	91.3 \pm 2.3	<u>338.0\pm8.6</u> ^c
licochoalcone A	45.1 \pm 0.3	<u>133.2\pm0.9</u> ^b
Trolox	21.9 \pm 0.9	<u>87.5\pm3.4</u> ^a

IC_{50} value was defined as the concentration of 50% superoxide anion radical inhibition and calculated by linear regression which was analyzed by Origin 2017 professional software. Means values with different superscripts in the same column are significantly different ($p < 0.05$).

2. Cu^{2+} -reducing power assay

Figure S2: The dose response curves of echinatin and licochalcone A in Cu^{2+} -reducing power assay. Each value is expressed as mean \pm SD (n = 3).

Tab. S2 The comparison of IC_{50} values of echinatin and licochalcone A and positive control in Cu^{2+} -reducing power assay.

	Mean \pm SD $\mu\text{g/mL}$	Mean \pm SD μM
echinatin	66.0 \pm 2.9	<u>228.1\pm10.6</u> ^c
licochoalcone A	43.7 \pm 0.7	<u>129.1\pm2.1</u> ^b
Trolox	16.9 \pm 0.2	<u>67.5\pm0.9</u> ^a

IC_{50} value was defined as the concentration of 50% superoxide anion radical inhibition and calculated by linear regression which was analyzed by Origin 2017 professional software. Means values with different superscripts in the same column are significantly different ($p < 0.05$).

3. PTIO•-scavenging assay

Figure S3: The dose response curves of echinatin and licochalcone A in PTIO•-scavenging assay. Each value is expressed as mean \pm SD (n = 3).

Tab. S3 The comparison of IC₅₀ values of echinatin and licochalcone A and positive control in PTIO•-scavenging assay.

	Mean \pm SD μ g/mL	Mean \pm SD μ M
echinatin	345.0 \pm 40.5	1276.5 \pm 149.9 ^c
licochalcone A	208.9 \pm 7.8	617.4 \pm 22.9 ^b
Trolox	67.8 \pm 2.7	270.9 \pm 10.8 ^a

IC₅₀ value was defined as the concentration of 50% superoxide anion radical inhibition and calculated by linear regression which was analyzed by Origin 2017 professional software. Means values with different superscripts in the same column are significantly different (p<0.05).

4. DPPH•-scavenging assay

Figure S4: The dose response curves of echinatin and licochalcone A in DPPH•-scavenging assay. Each value is expressed as mean \pm SD (n = 3).

Tab. S4 The comparison of IC₅₀ values of echinatin and licochalcone A and positive control in DPPH•-scavenging assay.

	Mean \pm SD μ g/mL	Mean \pm SD μ M
echinatin	106.6 \pm 18.2	394.2 \pm 67.5 ^c
licochalcone A	34.6 \pm 1.2	102.3 \pm 3.6 ^b
Trolox	12.0 \pm 0.6	47.8 \pm 2.6 ^a

IC₅₀ value was defined as the concentration of 50% superoxide anion radical inhibition and calculated by linear regression which was analyzed by Origin 2017 professional software. Means values with different superscripts in the same column are significantly different (p<0.05).
