

Figure S1. Protein profiles and Western blotting with anti-OmpA serum of bacterial lysate samples fractionated by 12% SDS –PAGE. A – cytosolic (C) and membranous (M) proteins fractions, extracted from *A. baumannii* strains were loaded on SDS-PAGE gel; additional complementation strain with *ompA* gene allele from Ab171 strain, belonging to IC II, was added; arrow indicates OmpA protein. B – Western-Blot analysis using OmpA specific serum obtained from immunized mice. The positions of standard molecular mass markers (PageRuler™ Prestained Protein Ladder (Thermo Fisher Scientific)) are shown on the left.
