

Supporting Information

Interacting Quantum Atoms (IQA) and Relative Energy Gradient (REG) Study of the Halogen Bond with explicit Analysis of Electron Correlation

Ibon Alkorta, Arnaldo F. Silva and Paul L. A. Popelier

Index:

- Pg. 2-4 **Figure S1.** Energy profiles calculated at MP4(SDQ)/6-31+G(2d,2p) level for all 7 complexes.
- Pg. 5 **Table S1.** Energy range of the energy profiles and the corresponding (atomic integration) errors calculated as the difference between the sum of the IQA terms and the original *ab initio* energy (kJ mol⁻¹).
- Pg. 6 **Figure S2.** Evolution of ρ_{BCP} , $\nabla^2\rho_{\text{BCP}}$ and H_{BCP} (in a.u.) along the energy profiles of all 7 complexes.
- Pg. 7-8 **Table S2.** REG analysis of the energy profiles of all seven complexes based on the **total atomic energies** ranked by their REG values.
- Pg. 9-12 **Table S3.** REG analysis of the energy profile of all seven complexes based on the **total interatomic and intra-atomic energies** ranked by their REG values
- Pg. 13-20 **Table S4.** REG analysis of the energy profile of all seven complexes based **on all the atomic energies electrostatic (V_e), exchange (V_x) and correlation (V_c)**, ranked by their REG values.
- Pg. 21 **Figure S3.** Relation between the total energy of H₃N:ClF (relative to the energy minimum, in Hartree), and the electrostatic (red) and exchange (blue) energy contributions (relative to the energy minimum, in Hartree) for the (top) **full** complex formation energy segment (SEG2) and the (bottom) **long-range-only** part of the complex formation segment.
- Pg. 22 **Figure S4.** Charge transfer profiles for all 7 complexes. The overall net charge of the halogen molecule is plotted (in e) versus the N...X distance (in Å).

Figure S1. Energy profiles calculated at MP4(SDQ)/6-31+G(2d,2p) level for all 7 complexes.

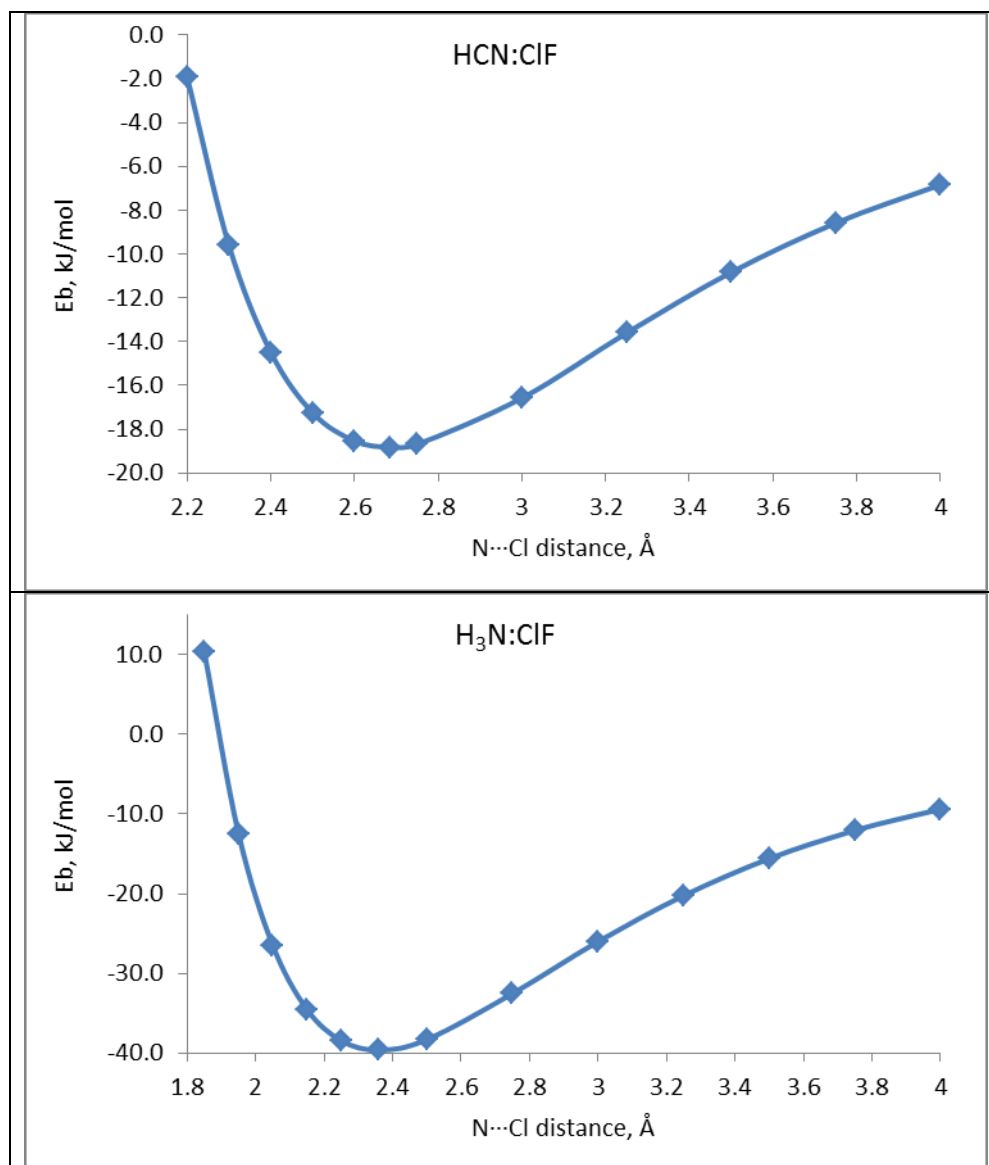

Table S1. Energy range of the energy profiles and the corresponding (atomic integration) errors calculated as the difference between the sum of the IQA terms and the original *ab initio* energy (kJ mol⁻¹).

Figure S2. Evolution of ρ_{BCP} , $\nabla^2\rho_{BCP}$ and H_{BCP} along the energy profiles of all seven complexes.

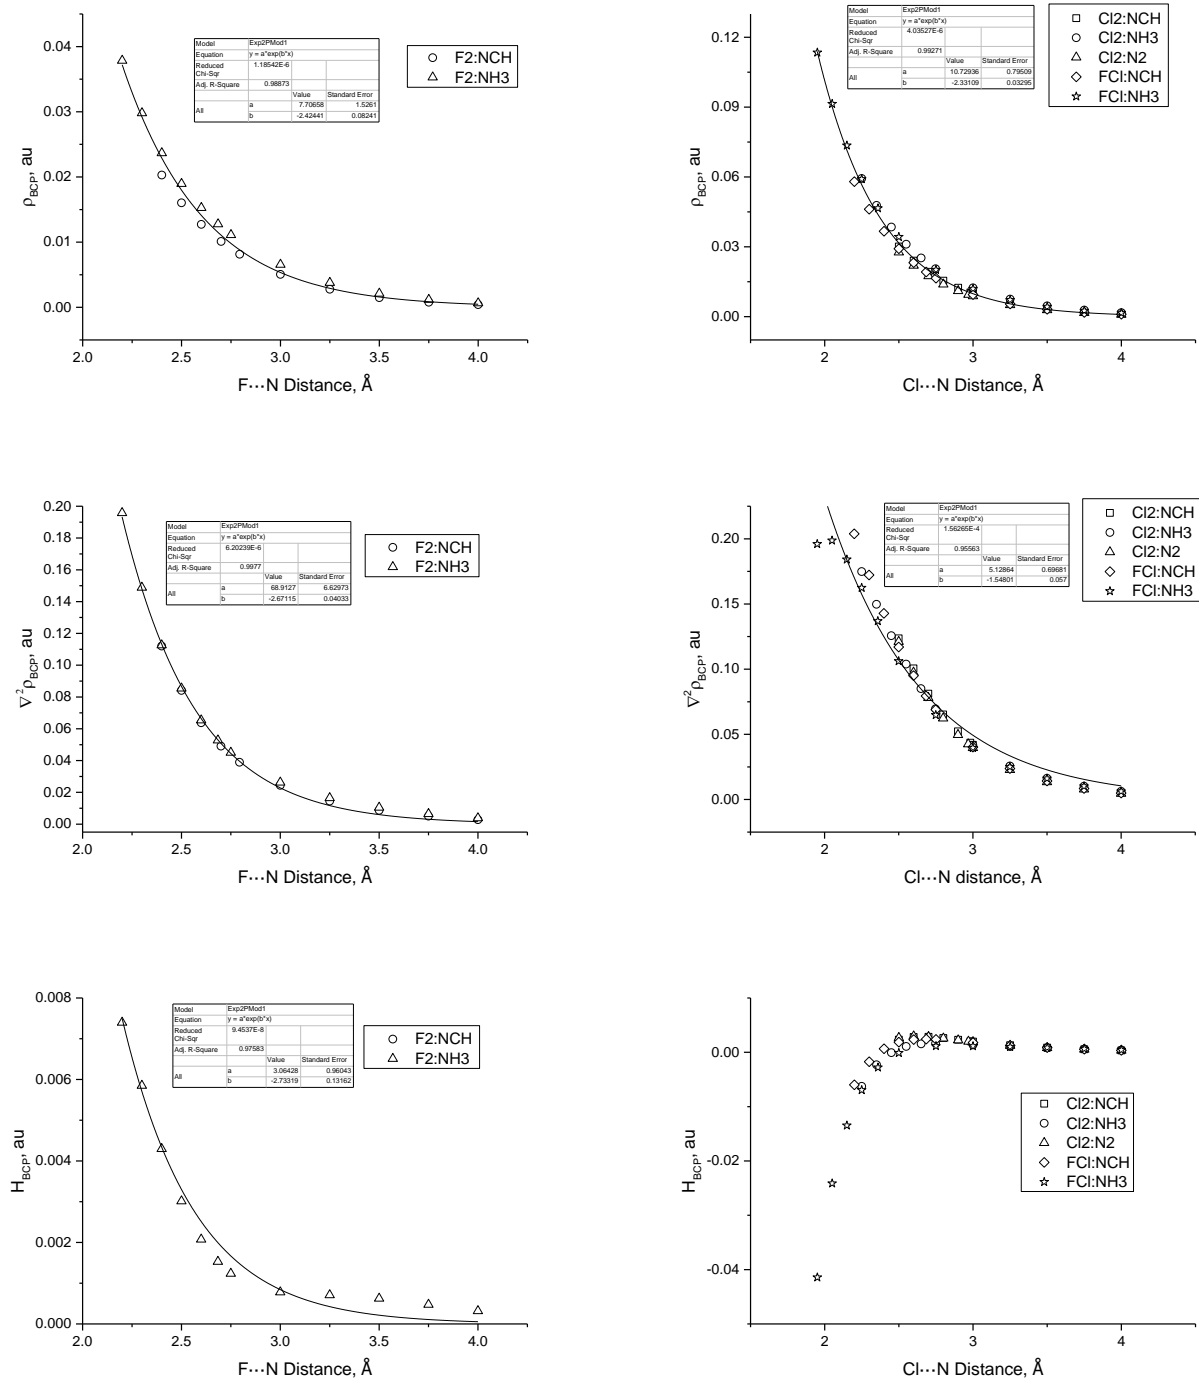

Table S2

Level 1 REG analysis of the energy profiles of all seven complexes based on the **total atomic energies** (E_{IQA}^A) ranked by their REG values. The atomic labelling should be clear from the common core scheme X1-X2...N3-etc. Note that in Table 3 of the main text, which summarises this Table, X1 is referred to as X_{outer} , and X2 as X_{inner} .

Table S4

Level 3 REG analysis of the energy profile of all seven complexes based on the total intra-atomic energy E_{intra}^A , and the interatomic atomic energies V_{cl} (electrostatic), V_{x} (exchange) and V_{c} correlation (overall 4 possible energy types), ranked by their REG values. The atomic labelling should be clear from the common core scheme X1-X2...N3-etc. Note that in Table 5 of the main text, which summarises this Table, X1 is referred to as X_{outer} , and X2 as X_{inner} .

Figure S3. Relation between the total energy of H₃N:ClF (relative to the energy minimum, in Hartree), and the electrostatic (red) and exchange (blue) energy contributions (relative to the energy minimum, in Hartree) for the (top) **full** complex formation energy segment (SEG2) and the (bottom) **long-range-only** part of the complex formation segment.

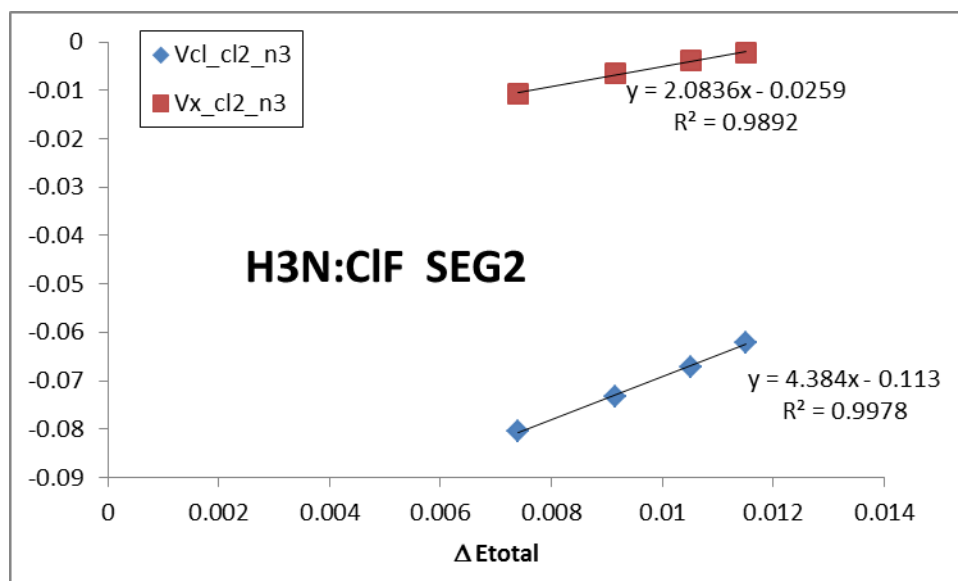

Figure S4. Charge transfer profiles for all 7 complexes. The overall net charge of the halogen molecule is plotted (in e) versus the N...X distance (in Å). The bold vertical line marks the equilibrium distance.
