Class “1”: non-toxic class and very toxic class for the 2 datasets nt and vt, respectively. Class “0”: the other binary class for each dataset.

Methods: cddd = RF/cddd 10 models, mg_bert = Molecular-graph-BERT/smiles 10 models, molbert = MolBERT/smiles 10 models, molbert_p = MolBERT/smiles 10 models with PubChem pretrained model, rdkit = RF/rdkit 10 models, xxx_1 is the corresponding approach based on only 1 model. SE = Sensitivity, SP = Specificity, BA = Balanced accuracy.
