Synthesis of TTTDM

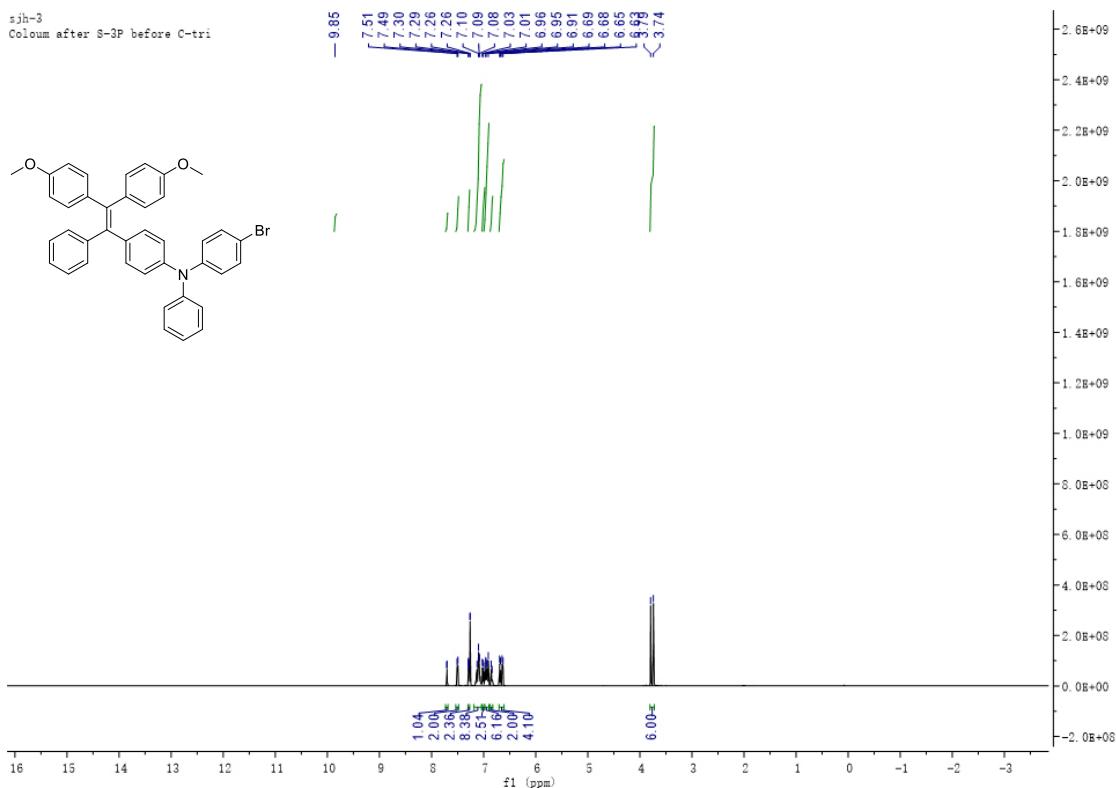

Scheme S1. Synthesis of Type-I photosensitizer TTTDM.

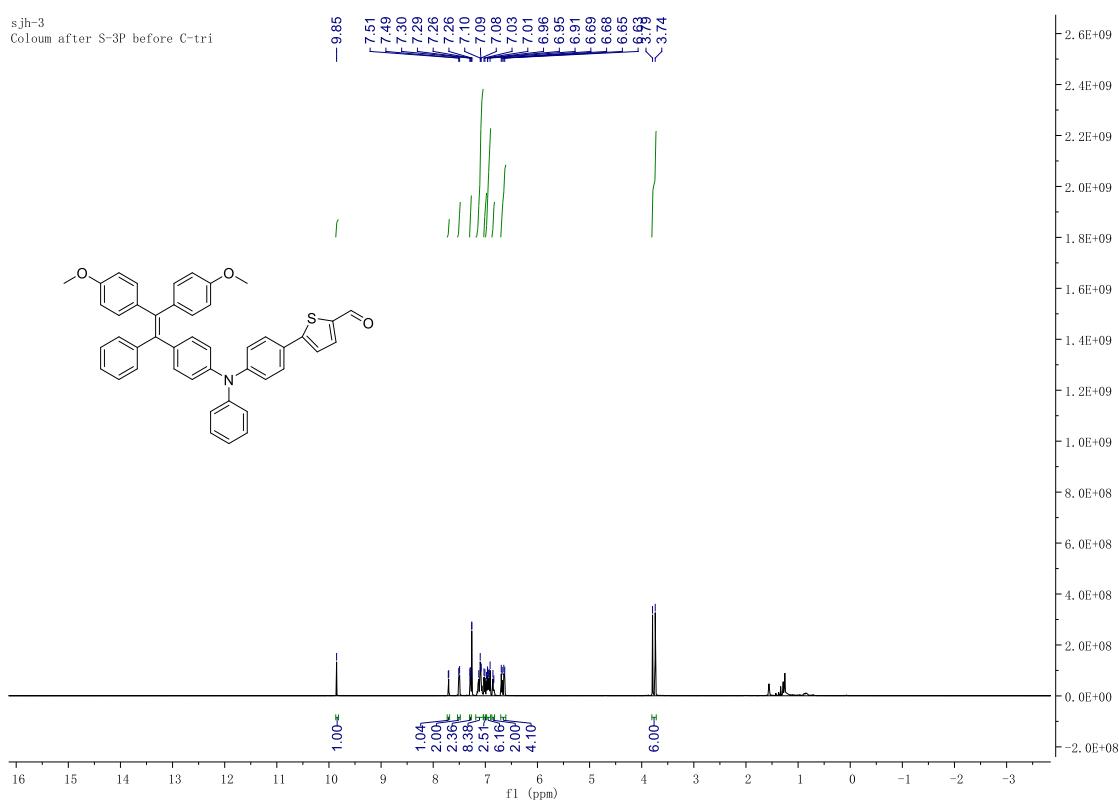

¹H NMR Spectra of intermediate and TTTDM

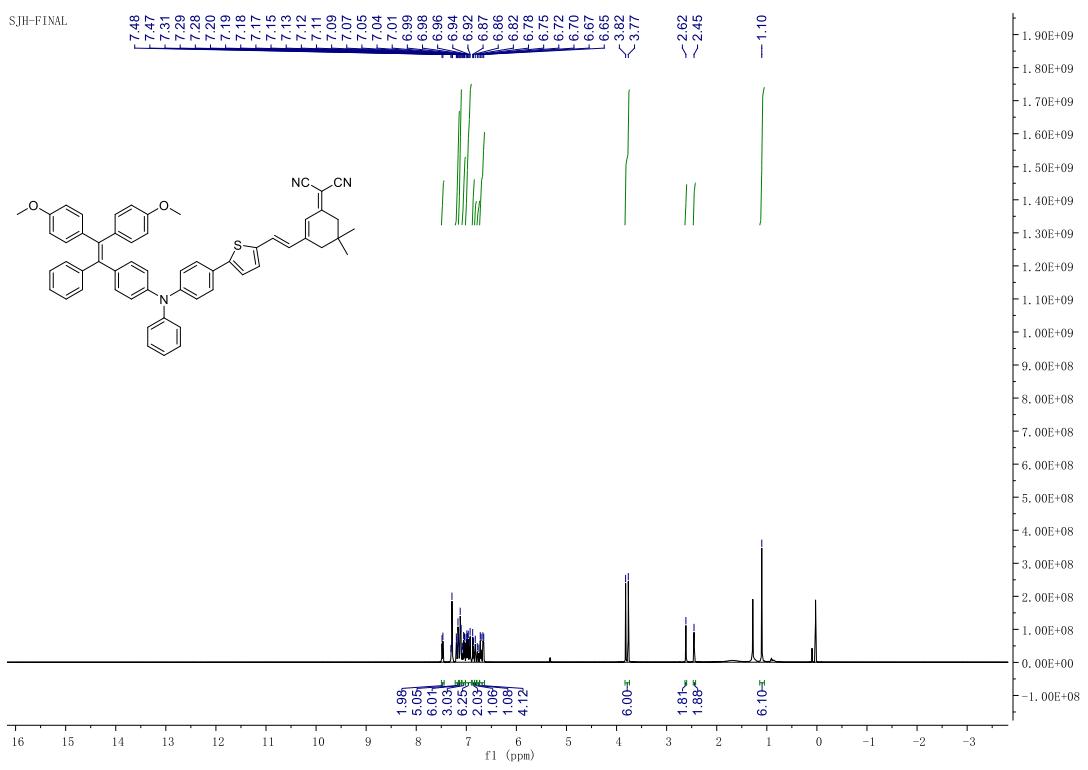

¹H NMR Spectra of intermediate 1 (CDCl₃, 298 K) Purity= 99%

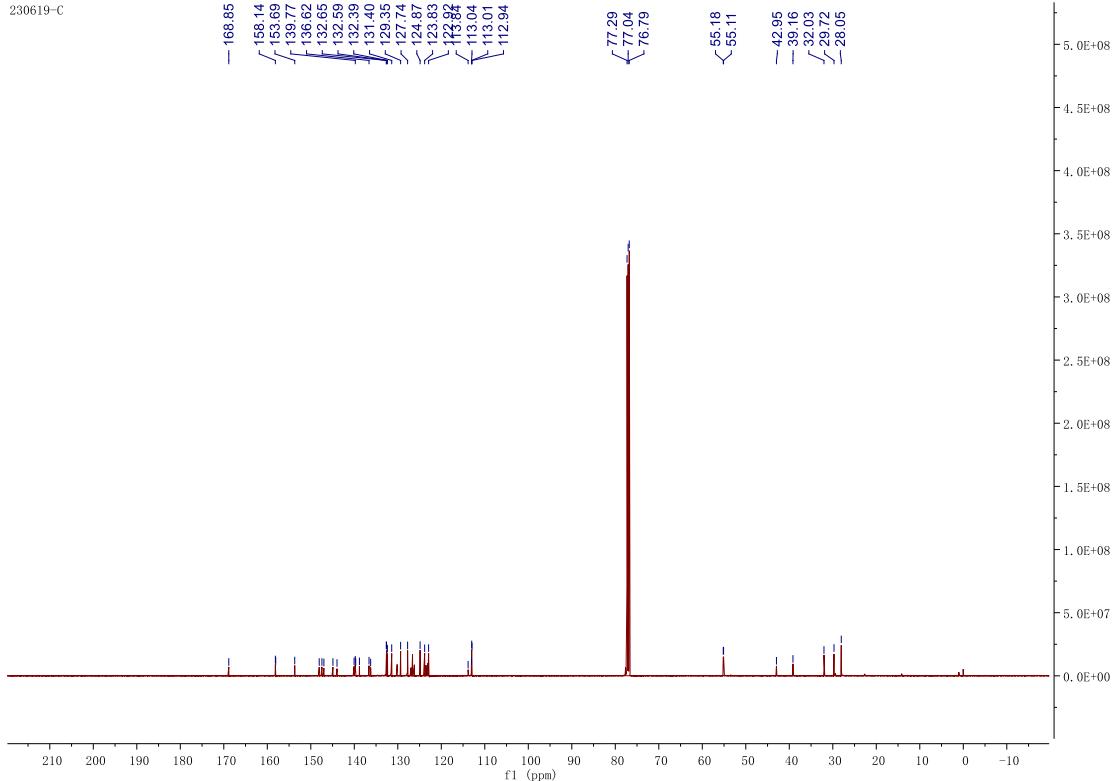

¹H NMR Spectra of intermediate 2(CDCl₃, 298 K) Purity= 100%

¹H NMR spectrum of intermediate 3 (CDCl₃, 298 K) Purity= 93 %

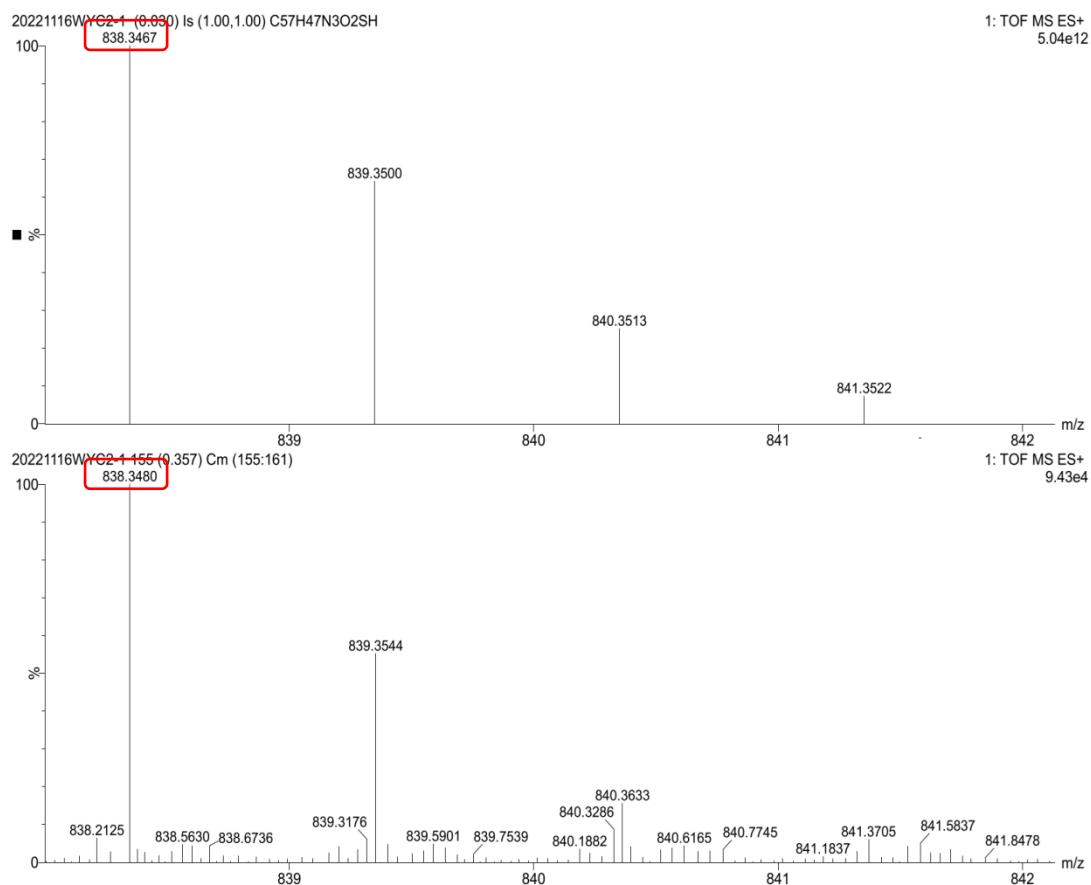

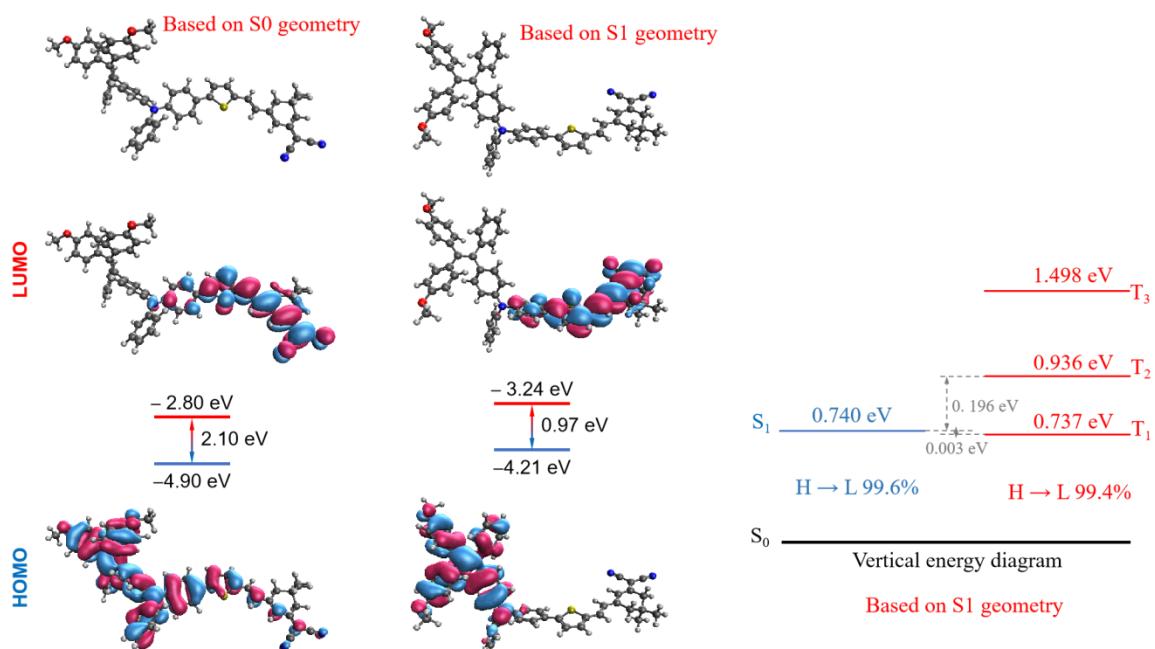

^1H NMR spectrum of TTTDM (CDCl_3 , 298 K) purity=99.95%

^{13}C NMR spectrum of TTTDM (CDCl_3 , 298 K)

Mass spectrum of TTTDM

**Figure S1 Theoretical calculation
Computational details**

The ground-state geometries of the molecule was optimized using density functional theory (DFT) method at the theoretical level of B3LYP-D3/6-31g(d,p). Time-dependent DFT (TD-DFT) method was utilized at the same level of theory to calculate energy levels of singlet, triplet states and their gap (ΔE) based on the optimized singlet-state geometries.[1] Above quantum chemical calculations were carried out by using Gaussian 16 program (Revision A.03).[2] The HOMO and LUMO were displayed using IQmol molecular viewer package (Vision 3.0.1).
