<b>Table S1:</b> Crystallographic data and data collection parameters (continued) .....	13
<b>Figure S1.</b> Ellipsoid representation of $[\text{La}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>1</b> ) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 53 electrons were found in a volume of $218 \text{ \AA}^3$ in 3 voids per unit cell. This is consistent with the presence of $2.5 \text{ H}_2\text{O}$ per formula unit which account for 50 electrons per unit cell. ....	14
<b>Figure S2.</b> Ellipsoid representation of $[\text{Ce}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>2</b> ) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....	14
<b>Figure S3:</b> Ellipsoid representation of $[\text{Pr}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>3</b> ) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....	15
<b>Figure S4:</b> Ellipsoid representation of $[\text{Nd}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>4</b> ) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 54 electrons were found in a volume of $247 \text{ \AA}^3$ in 4 voids per unit cell. This is consistent with the presence of $2.5 \text{ H}_2\text{O}$ per formula unit which account for 50 electrons per unit cell. ....	15
<b>Figure S5:</b> Ellipsoid representation of $[\text{Sm}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>5</b> ). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 55 electrons were found in a volume of $240 \text{ \AA}^3$ in 4 voids per unit cell. This is consistent with the presence of $2.5 \text{ H}_2\text{O}$ per formula unit which account for 50 electrons per unit cell. ....	16
<b>Figure S6:</b> Ellipsoid representation of $[\text{Eu}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>6</b> ). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 46 electrons were found in a volume of $227 \text{ \AA}^3$ in 3 voids per unit cell. This is consistent with the presence of $2.5 \text{ H}_2\text{O}$ per formula unit which account for 50 electrons per unit cell. ....	16
<b>Figure S7:</b> Ellipsoid representation of $[\text{Gd}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$ ( <b>7</b> ). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 65 electrons were found in a volume of $179 \text{ \AA}^3$ in 2 voids per unit cell. This is consistent with the presence of $3.5 \text{ H}_2\text{O}$ per formula unit which account for 70 electrons per unit cell. ....	17

- Figure S8:** Ellipsoid representation of  $[\text{Tb}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**8**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 48 electrons were found in a volume of  $252 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of  $2.5 \text{ H}_2\text{O}$  per formula unit which account for 50 electrons per unit cell. ....17
- Figure S9:** Ellipsoid representation of  $[\text{Dy}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**9**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 43 electrons were found in a volume of  $138 \text{ \AA}^3$  in 1 void per unit cell. This is consistent with the presence of  $2 \text{ H}_2\text{O}$  per formula unit which account for 40 electrons per unit cell. ....18
- Figure S10:** Ellipsoid representation of  $[\text{Ho}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**10**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 43 electrons were found in a volume of  $282 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of  $2 \text{ H}_2\text{O}$  per formula unit which account for 40 electrons per unit cell. ....18
- Figure S11:** Ellipsoid representation of  $[\text{Er}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**11**) including the positional disorder in the peripheral  $\text{N}(\text{ethyl})_2$  groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....19
- Figure S12:** Ellipsoid representation of  $[\text{Tm}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**12**) including the positional disorder in the peripheral  $\text{N}(\text{ethyl})_2$  groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....19
- Figure S13:** Ellipsoid representation of  $[\text{Yb}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**13**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 33 electrons were found in a volume of  $235 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of  $1.5 \text{ H}_2\text{O}$  per formula unit which account for 30 electrons per unit cell. ....20
- Figure S14:** Ellipsoid representation of  $[\text{Lu}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**14**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....20
- Figure S15:** Ellipsoid representation of  $[\text{Sc}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**15**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....21
- Figure S16:** Ellipsoid representation of  $[\text{Y}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**16**)  $\times \text{H}_2\text{O}$ . The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....21
- Figure S17:** Ellipsoid representation of  $[\text{In}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**17**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....22
- Figure S18:** Ellipsoid representation of  $[\text{Ga}\{\text{Au}_2(\text{L}^{1\text{ethyl}})_2\}(\text{NO}_3)]$  (**18a**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 334 electrons were found in a volume of  $2100 \text{ \AA}^3$  in 1 void per unit cell. This is consistent with the presence of  $2 \text{ CH}_2\text{Cl}_2$  per formula unit which account for 336 electrons per unit cell. ....22
- Figure S19:** Ellipsoid representation of  $[\text{Ga}\{\text{Au}_2(\text{L}^{1\text{ethyl}})_2\}(\text{BF}_4)]$  (**18b**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. ....23

<b>Figure S20:</b> Ellipsoid representation of $[(\text{AuCl})_2(\text{H}_2\text{L}^{1\text{ethyl}})]$ ( <b>19</b> ). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.....	23
<b>Figure S21:</b> Ellipsoid representation of $[\text{Zn}\{\text{Au}_2(\text{L}^{1\text{ethyl}})_2\}]$ ( <b>21</b> ). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 220 electrons were found in a volume of $946 \text{ \AA}^3$ in 1 void per unit cell. This is consistent with the presence of 6 $\text{H}_2\text{O}$ per formula unit which account for 240 electrons per unit cell. ....	24
<b>Figure S22:</b> Ellipsoid representation of $[\text{Sc}(\text{H}_2\text{O})_2\{\text{Au}(\text{L}^{1\text{ethyl}})_2\}]$ ( <b>22</b> ) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.....	24

**Figure S1.** Ellipsoid representation of  $[\text{La}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**1**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 53 electrons were found in a volume of  $218 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of  $2.5 \text{ H}_2\text{O}$  per formula unit which account for 50 electrons per unit cell.

**Figure S2.** Ellipsoid representation of  $[\text{Ce}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**2**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S3:** Ellipsoid representation of  $[\text{Pr}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**3**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S4:** Ellipsoid representation of  $[\text{Nd}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**4**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 54 electrons were found in a volume of 247 Å<sup>3</sup> in 4 voids per unit cell. This is consistent with the presence of 2.5 H<sub>2</sub>O per formula unit which account for 50 electrons per unit cell.

**Figure S5:** Ellipsoid representation of  $[\text{Sm}\{\text{Au}_3(\text{L}1^{\text{ethyl}})_3\}]$  (**5**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 55 electrons were found in a volume of  $240 \text{ \AA}^3$  in 4 voids per unit cell. This is consistent with the presence of  $2.5 \text{ H}_2\text{O}$  per formula unit which account for 50 electrons per unit cell.

**Figure S6:** Ellipsoid representation of  $[\text{Eu}\{\text{Au}_3(\text{L}1^{\text{ethyl}})_3\}]$  (**6**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 46 electrons were found in a volume of  $227 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of  $2.5 \text{ H}_2\text{O}$  per formula unit which account for 50 electrons per unit cell.

**Figure S7:** Ellipsoid representation of  $[\text{Gd}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**7**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 65 electrons were found in a volume of  $179 \text{ \AA}^3$  in 2 voids per unit cell. This is consistent with the presence of 3.5  $\text{H}_2\text{O}$  per formula unit which account for 70 electrons per unit cell.

**Figure S8:** Ellipsoid representation of  $[\text{Tb}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**8**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 48 electrons were found in a volume of  $252 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of 2.5  $\text{H}_2\text{O}$  per formula unit which account for 50 electrons per unit cell.

**Figure S9:** Ellipsoid representation of  $[\text{Dy}\{\text{Au}_3(\text{L}^{\text{ethyl}})_3\}]$  (**9**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 43 electrons were found in a volume of  $138 \text{ \AA}^3$  in 1 void per unit cell. This is consistent with the presence of 2  $\text{H}_2\text{O}$  per formula unit which account for 40 electrons per unit cell.

**Figure S10:** Ellipsoid representation of  $[\text{Ho}\{\text{Au}_3(\text{L}^{1\text{ethyl}})_3\}]$  (**10**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 43 electrons were found in a volume of  $282 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of 2  $\text{H}_2\text{O}$  per formula unit which account for 40 electrons per unit cell.

**Figure S11:** Ellipsoid representation of  $[\text{Er}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**11**) including the positional disorder in the peripheral  $\text{N}(\text{ethyl})_2$  groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S12:** Ellipsoid representation of  $[\text{Tm}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**12**) including the positional disorder in the peripheral  $\text{N}(\text{ethyl})_2$  groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S13:** Ellipsoid representation of  $[\text{Yb}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**13**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 33 electrons were found in a volume of  $235 \text{ \AA}^3$  in 3 voids per unit cell. This is consistent with the presence of  $1.5 \text{ H}_2\text{O}$  per formula unit which account for 30 electrons per unit cell.

**Figure S14:** Ellipsoid representation of  $[\text{Lu}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**14**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S15:** Ellipsoid representation of  $[\text{Sc}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**15**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S16:** Ellipsoid representation of  $[\text{Y}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**16**)  $\times$   $\text{H}_2\text{O}$ . The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S17:** Ellipsoid representation of  $[\text{In}\{\text{Au}_3(\text{L1}^{\text{ethyl}})_3\}]$  (**17**) including the positional disorder in the peripheral ethyl groups. The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S18:** Ellipsoid representation of  $[\text{Ga}\{\text{Au}_2(\text{L1}^{\text{ethyl}})_2\}](\text{NO}_3)$  (**18a**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity. A solvent mask was calculated and 334 electrons were found in a volume of  $2100 \text{ \AA}^3$  in 1 void per unit cell. This is consistent with the presence of 2  $\text{CH}_2\text{Cl}_2$  per formula unit which account for 336 electrons per unit cell.

**Figure S19:** Ellipsoid representation of  $[\text{Ga}\{\text{Au}_2(\text{L1}^{\text{ethyl}})_2\}](\text{BF}_4)$  (**18b**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.

**Figure S20:** Ellipsoid representation of  $[(\text{AuCl})_2(\text{H}_2\text{L1}^{\text{ethyl}})]$  (**19**). The thermal ellipsoids are set at a 50% probability level. Hydrogen atoms are omitted for clarity.
