Drug repurposing to inhibit brain Histamine N-Methyl Transferase

Elvia Mera Jiménez, Teresa Žołek, Paola Gabriela Hernández Perez, Rene Miranda Ruvalcaba, María Inés Nicolás-Vázquez, Maricarmen Hernández-Rodríguez

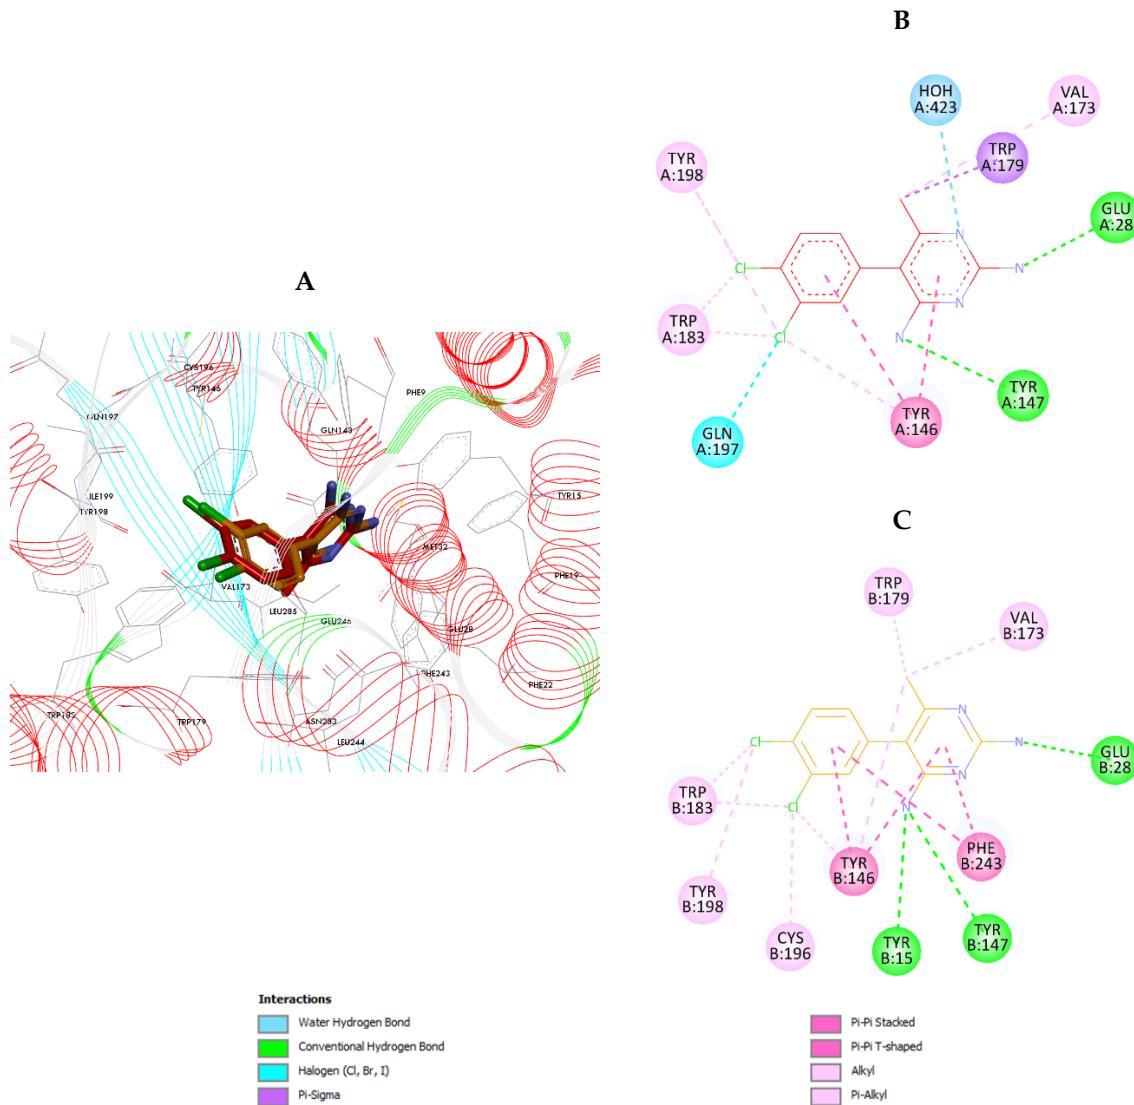

Figure S1. Binding mode of metoprine in the crystal structure of HNMT protein (PDB ID: 2AOV) before re-docking (red colour) and after re-docking (orange colour). (RMSD between the redocking pose and the crystallographic structure was 0.98 Å).

Table S1. FDA-approved drugs employed to treat neurological disorders employed in the present study and their binding free energies (ΔG) towards HNMT obtained by rigid docking studies employing AutoDock 4.2.
