

Table S1. Skin AGEs levels are increased in patients with severe psoriasis as compared to patients with mild psoriasis, severe eczema and healthy controls [1].

Skin AGEs (a.u.)	Mean	95% CI	SE	SD	P Value
Severe Psoriasis	2.87	2.64 – 3.11	0.115	0.619	-
Mild Psoriasis	2.15	1.99 – 2.30	0.075	0.467	0.04
Severe Eczema	1.90	1.73 – 2.07	0.084	0.499	0.02
Healthy Individuals	1.86	1.68 – 2.05	0.09	0.527	0.01

Values are mean \pm standard deviation (SD) or standard error (SE) or confidential intervals (CI). Skin AGEs are expressed in arbitrary units (a.u.) and evaluated by the AGE Reader mu[®] (Diagnoptics Technologies B.V., Groningen, the Netherlands), which measures tissue AGEs by means of fluorescence technique.
