Supplementary Materials
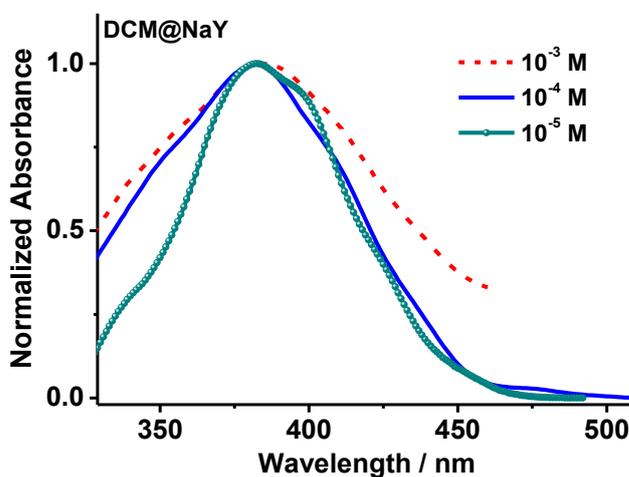

Figure S1. Normalized (to the maximum of intensity) UV-visible diffuse transmittance spectra of DCM interacting with NaY zeolite in dichloromethane suspensions at different initial dye concentrations: 1×10^{-3} (dashed line), 1×10^{-4} (solid line), and 1×10^{-5} (scattered-solid line) M.
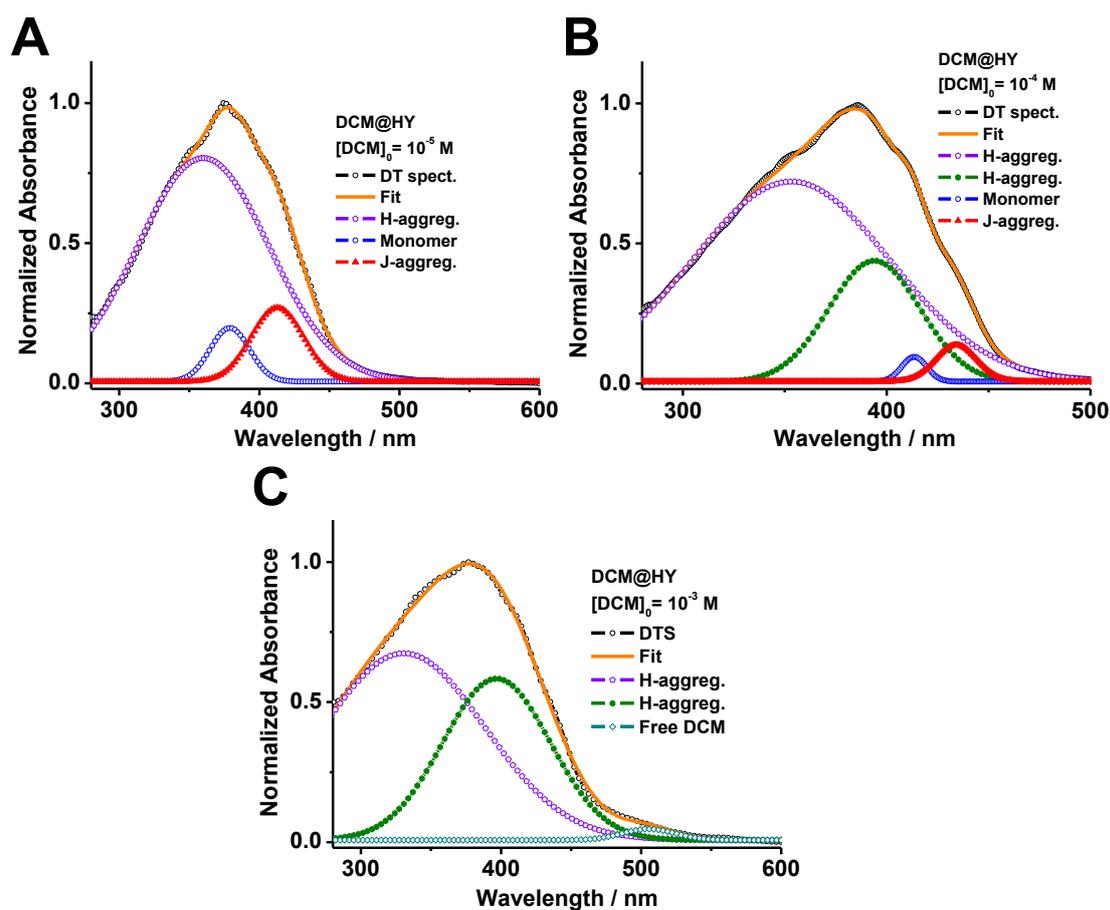

Figure S2. Deconvolution of the UV-visible DT spectra of DCM@HY in dichloromethane suspensions at different initial DCM concentrations: (A) 1×10^{-5} M, (B) 1×10^{-4} M, and (C) 1×10^{-3} M.

DCM@HY	H-aggregates		Monomers		J-aggregates		Free DCM	
$[DCM]_0$/M	λ_{Abs} (nm)	Area (%)	λ_{Abs} (nm)	Area (%)	λ_{Abs} (nm)	Area (%)	λ_{Abs} (nm)	Area (%)
10^{-5}HY	360	83	379	6	413	11	-	-
10^{-4}	353, 394	76, 21	414	1	434	2	-	-
10^{-3}	331, 397	63, 36	-	-	-	-	505	1

Table S1. Values of the maximum intensity wavelengths and normalized (to 100%) integral areas observed in the UV-visible DT spectra of the formed species of DCM upon interaction with HY zeolite in dichloromethane suspensions. The spectral components were obtained by a spectral deconvolution of the experimental data. The

32 error associated to the wavelength at the maximum absorption intensity (λ_{Abs}) in the deconvolution analysis is

33 about ~ 5 nm.
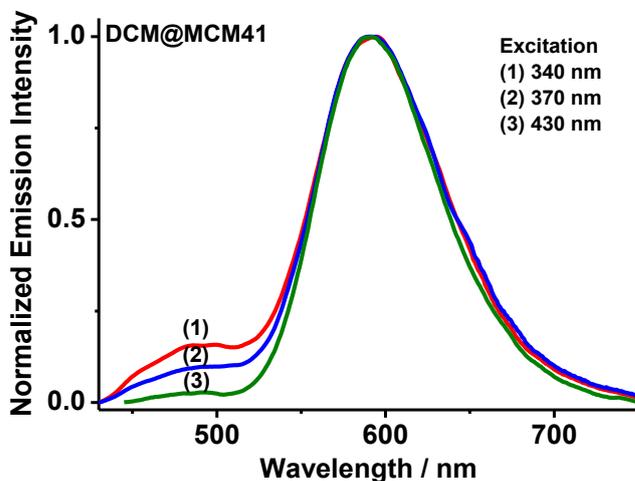

34

35 **Figure S3.** Normalized (to the maximum of intensity) UV-visible fluorescence spectra of DCM interacting with

36 MCM-41 in dichloromethane suspension. The initial dye concentration is 1×10^{-4} M. For emission, the excitation

37 wavelengths are indicated in the Inset.

38
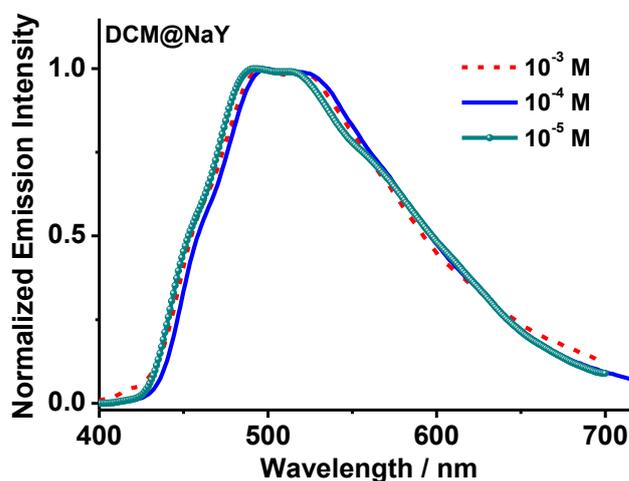

39

40 **Figure S4.** Normalized (to the maximum of intensity) UV-visible fluorescence (excitation wavelength = 370 nm)

41 spectra of DCM interacting with NaY zeolite in dichloromethane suspensions at different initial dye

42 concentrations: 1×10^{-3} (dashed line), 1×10^{-4} (solid line), and 1×10^{-5} (scattered-solid line) M.
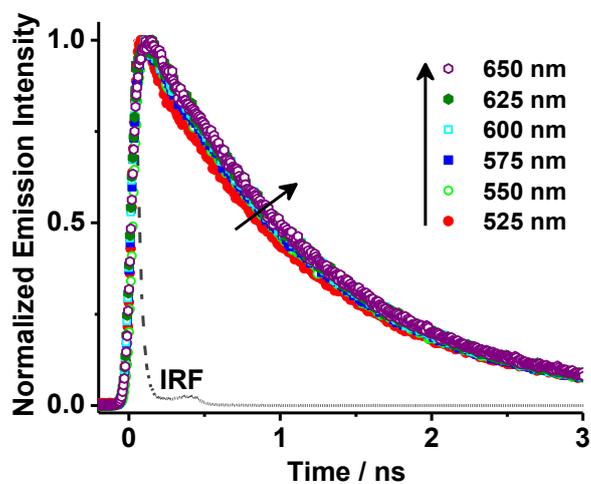

Figure S5. Normalized (to the maximum of intensity) magic-angle emission decays of DCM in dichloromethane solution upon excitation at 371 nm and observing at the wavelengths indicated in the Inset.

System	λ_{obs}/nm	τ_1/ns	a_1/%	τ_2/ns	a_2/%
DCM/dichlorome thane	525	0.20	19	1.13	81
	550		15		85
	575		12		88
	600		11		89
	625		10		90
	650		9		91

Table S2. Values of time constants (τ_i) and normalized to (100) pre-exponential factors (a_i) obtained from the fit of the emission decays of DCM in dichloromethane solution upon excitation at 371 nm and observation as indicated in the Table.
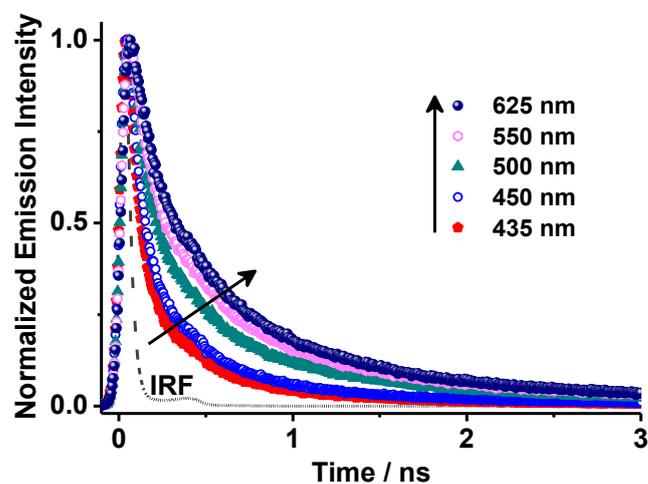

56 **Figure S6.** Normalized (to the maximum of intensity) magic-angle emission decays of DCM (1×10^{-3} M)

57 interacting with HY zeolite in dichloromethane suspension. The sample was excited at 371 nm and observed at

58 the wavelengths indicated in the Inset.
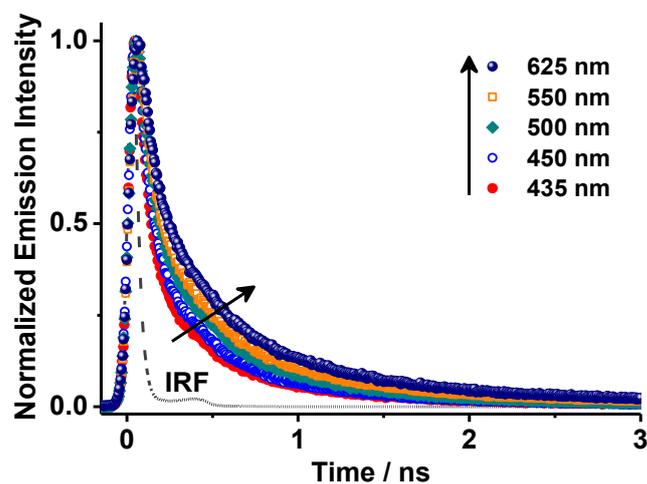

59

60 **Figure S7.** Normalized (to the maximum of intensity) magic-angle emission decays of DCM (1×10^{-4} M)

61 interacting with HY zeolite in dichloromethane suspension. The sample was excited at 371 nm and observed at

62 the wavelengths indicated in the Inset.
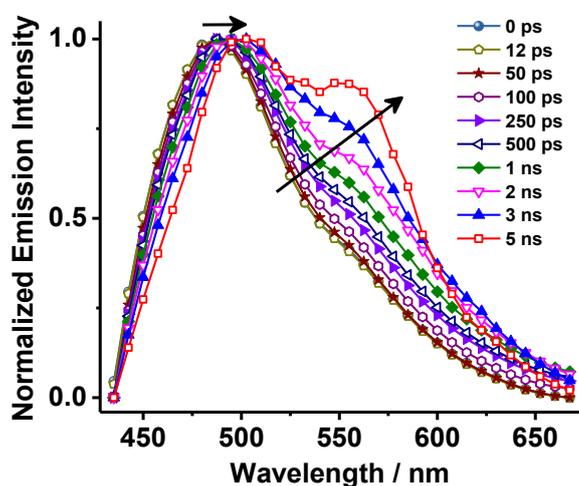

63

64 **Figure S8.** Normalized time-resolved emission spectra (TRES) of DCM (1×10^{-4} M) interacting with HY zeolite

65 in dichloromethane suspension gated at the indicated delay times after excitation at 371 nm.
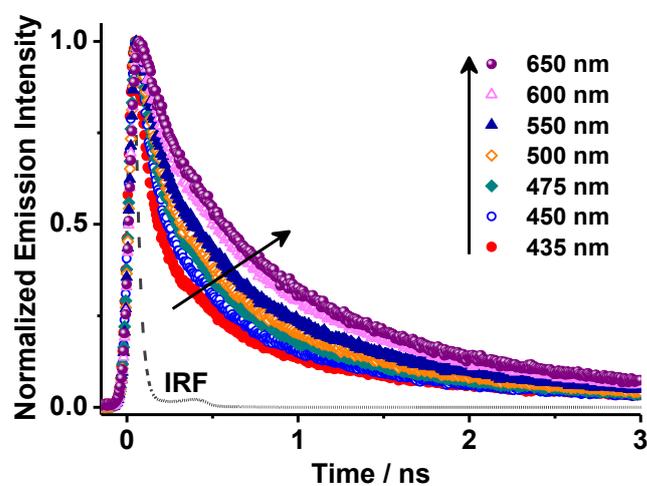

Figure S9. Normalized (to the maximum of intensity) magic-angle emission decays of DCM (1×10^{-4} M) interacting with NaX zeolite in dichloromethane suspension. The sample was excited at 371 nm and observed at the wavelengths indicated in the Inset.
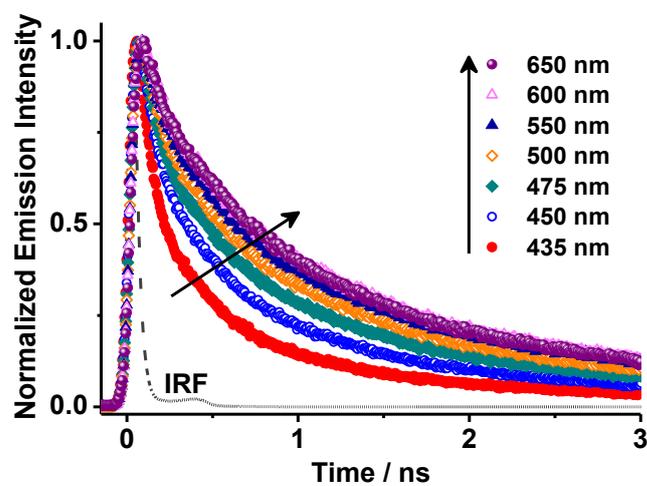

Figure S10. Normalized (to the maximum of intensity) magic-angle emission decays of DCM (1×10^{-4} M) interacting with NaY zeolite in dichloromethane suspension. The sample was excited at 371 nm and observed at the wavelengths indicated in the Inset.
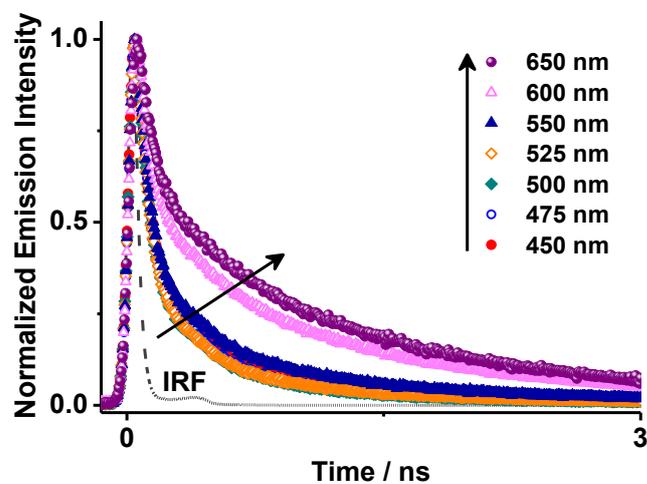

Figure S11. Normalized (to the maximum of intensity) magic-angle emission decays of DCM (1×10^{-4} M) interacting with MCM-41 in dichloromethane suspension. The sample was excited at 371 nm and observed at the wavelengths indicated in the Inset.

Table S3. Values of time constants (τ_i) and normalized (to 100) pre-exponential factors (a_i) obtained from the fit of the emission decays of DCM (1×10^{-4} M) interacting with HY, NaX, NaY, and MCM-41 in dichloromethane suspensions upon excitation at 371 nm at the observation wavelengths indicated in the Table.

		H-aggregates		J-aggregates		Monomers		Free DCM
