

Supplementary Figure S1.

**Supplementary Figure S1.** The levels of advanced glycation end product in plasma and kidney homogenates. The levels were measured by ELISA in the (a) plasma or (b) kidney tissues from FLS-*ob/ob* mouse. For the measurement in kidney AGE, homogenates containing 100 $\mu\text{g}$  of protein was used. No significant differences were found between each group. Bars indicate average  $\pm$  SEM. Ctrl, control group; Ipra, Ipragliflozin group.
