

Supplementary Materials:

Supplementary Figure 1. Representative images of H&E staining of cryosections derived from mdx and mdx Θ -/- TA muscle at 1.5, 3, 6 and 12 months (n= 4-5/age/genotype).

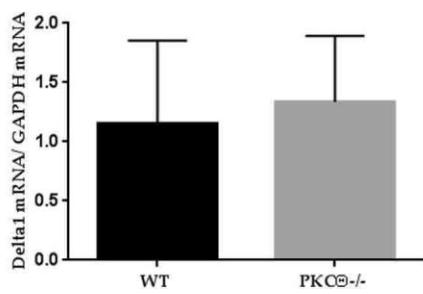

Supplementary Figure 2. Representative images of eMHC (red) and Laminin (green) immunofluorescence staining of TA section from 1, 1.5, 3, 6 and 12 months old mdx and mdx^{0/-} mice (*n=4-5/age/genotype*). Nuclei were counterstained with Hoechst (blue).

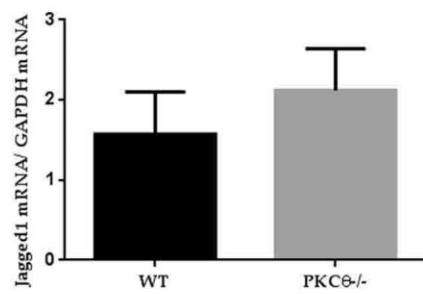

Supplementary Figure 3. Representative images of Pax7 (red) and Laminin (green) immunofluorescence analysis of TA section from 6 and 12 weeks, 6 and 12 months old *mdx* and *mdxθ⁻/⁻* mice (*n=3/genotype/age*). Nuclei were counterstained with Hoechst (blue).

A

B

Supplementary Figure 4. qRT-analysis of Delta1(A) and Jagged1 (B) expression in healthy WT/bl6 and PKC Θ TA (n=5/genotype) muscle. RNA expression level in WT/bl6 and PKC Θ -/- was normalized against GAPDH.

GENE	Primer sequences (5'-3')
Notch1 for rev	GGT CGC AAC TGT GAG AGT GA TTG CTG GCA CAT TCA TTG AT
