

Fig. S5: Detection of NQO1 and TXNRD1 expression by quantitative RT-PCR.

A) Detection of NQO1 gene expression and B) TXNRD1 gene expression immediately (T0), 24h, 48h or 72h after treatment with or without a 4Gy irradiation.

Representative dot plots normalized by the value of the untreated non-irradiated control for each time point (means \pm S.D., $n=2$).
