

Supplementary Figure 3

Supplementary Figure 3: The percentage of lymphocytes is normal in fetal liver of PDE2A^{-/-} embryos. Panels and histograms show flow cytometry analysis of T cells (**A**) and B cells (**B**) isolated from livers of E14.5 embryos and detected with antibodies anti-CD3 and anti-B220, respectively. PDE2A^{-/-} embryos (right panels) compared to PDE2A^{+/+} embryos (left panels) show similar percentage of T and B cells.
