

Supplementary Figure S1. (A) LINC00312 is positively correlated with myofibroblasts markers by Pearson correlation analysis. Levels of α -SMA expressions in fBMFs with LINC00312 (B) or YBX-1 (C) knockdown were examined by western blotting and measured by densitometer. The relative level of indicated protein expression was normalized against GAPDH and the control was set as 100%. Optical density values represent the mean \pm SD. Data shown here are the mean \pm SD of three independent experiments. * $p < 0.05$ compared to Sh-Luc. group.
