

Figure S1. Gonado somatic index (gonad weight/total weight) of the fish used for pituitary harvesting in each FACS sample.

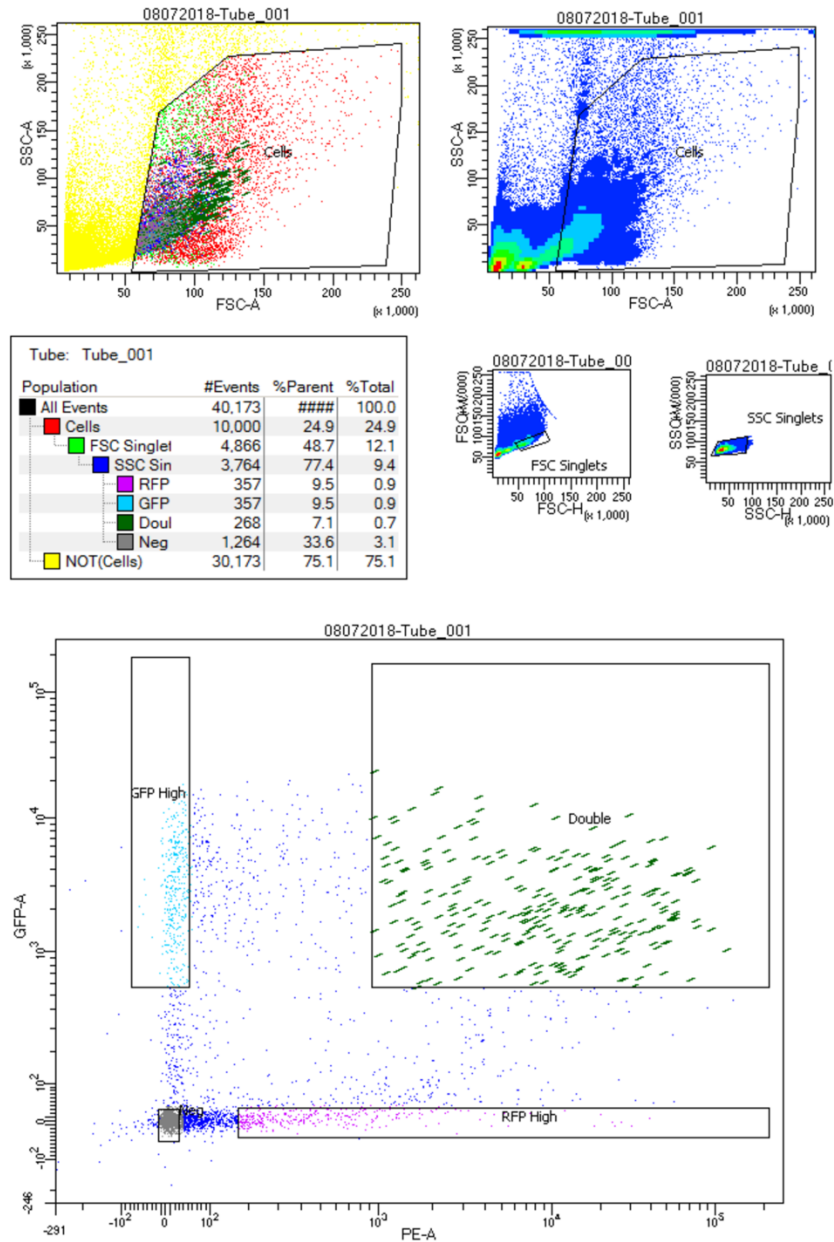

Figure S2. The complete gating parameters of the FACS assay for LH and FSH cells separation.

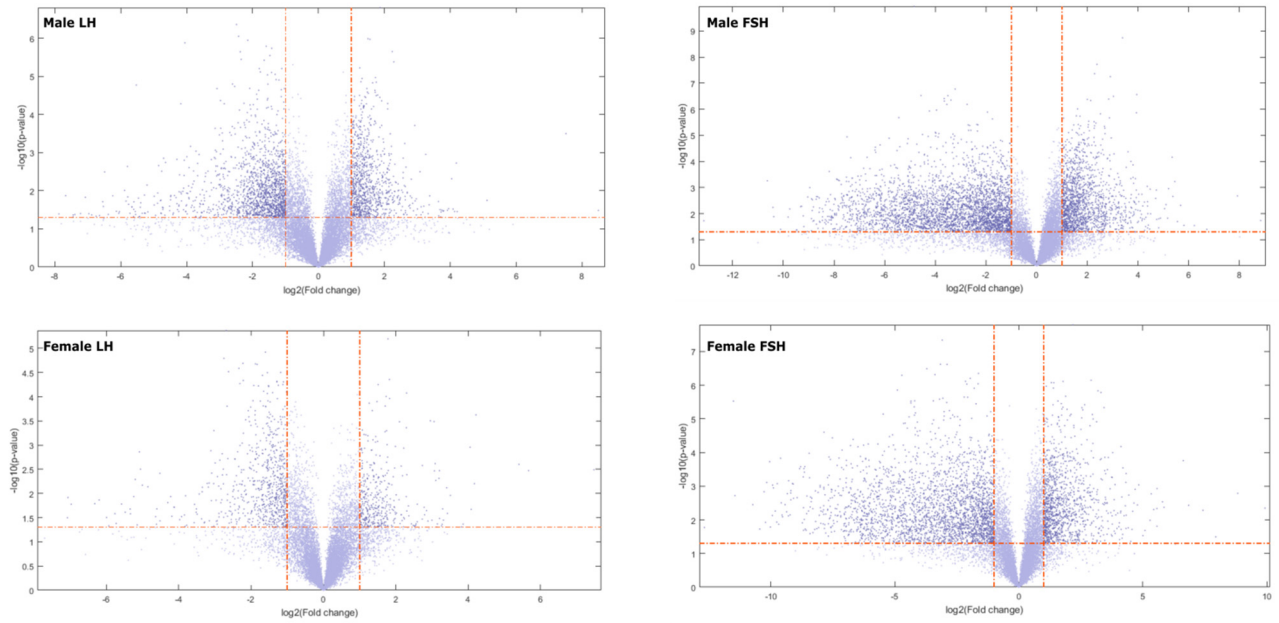

Figure S3. Volcano plots of the genes in each RNAseq library. with read count >20. The plots describing the gene distribution in each fraction according to their fold change and p-value compared to the negative fraction. Red lines represent the cutoff of genes with $p < 0.05$ and fold change >2. Volcano plots were prepared using MATLAB mavolcanoplot command.

Table S1. Primers used for real time validation of the sorted fractions.

Name	Position	5' to 3' sequence	Slope	R ²
LH_F	109	TATCTCCTGCAGCGGCCTT	-3.35	1
