

Supplementary material 1

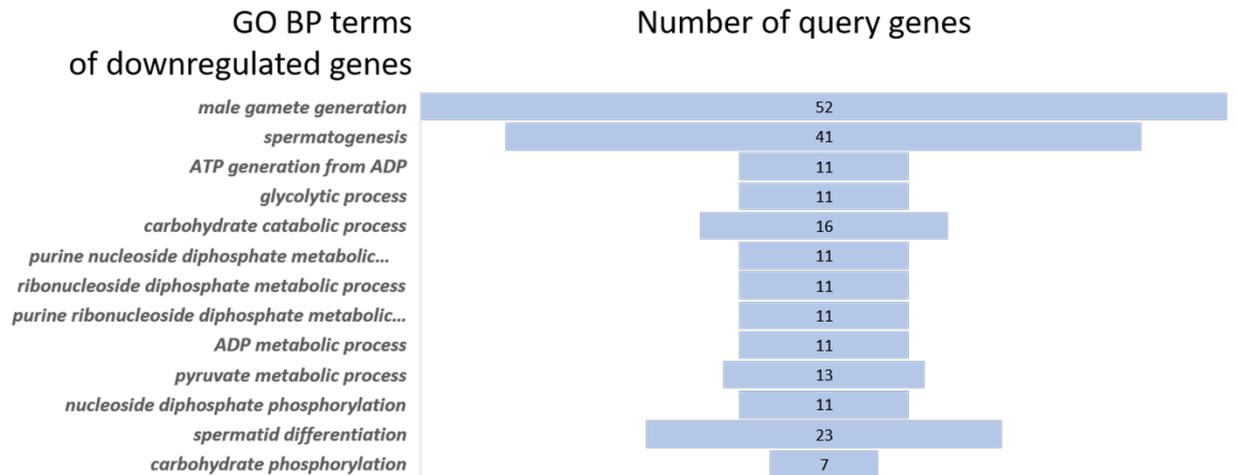

**Figure S1.** Analysis of the *UAS-sws-RNAi<sup>v5469</sup>* (VDRC № v5469) transgene effects. **(A)** Relative *sws* mRNA level in heads of flies with *sws* knockdown in neurons (*nSyb-GAL4;UAS-sws-RNAi*) or in glia (*repo-GAL4;UAS-sws-RNAi*) and control flies (F1 males obtained from crossing a *CantonS* female and a respective *GAL4* male). The level of *sws* mRNA in the control is taken as 1,00 in each sample. The mean value of 2<sup>-ΔΔCT</sup> and 95% CI, Student t-test, \*  $p < 0.05$ , \*\*\*  $p < 0.001$ ,  $N = 3$ . **(B)** Horizontal 7 μm paraffin and **(C)** horizontal 1 μm plastic semithin brain sections of 20-day-old *sws<sup>1</sup>* mutants, flies with the neuronal (*elav-GAL4;UAS-sws-RNAi<sup>v5469</sup>*) and glial (*repo-GAL4;UAS-sws-RNAi<sup>v5469</sup>*) *sws* knockdown or without it (*elav-GAL4/+* and *repo-GAL4/+*). Re – retina, La – lamina, Me – medulla. Scale bar: 50 μm. Brain tissue neurodegenerative vacuoles are marked with arrows. Flies of the *elav-GAL4;UAS-sws-RNAi<sup>v5469</sup>* showed no neurodegenerative phenotype in contrast to *repo-GAL4;UAS-sws-RNAi<sup>v5469</sup>*.

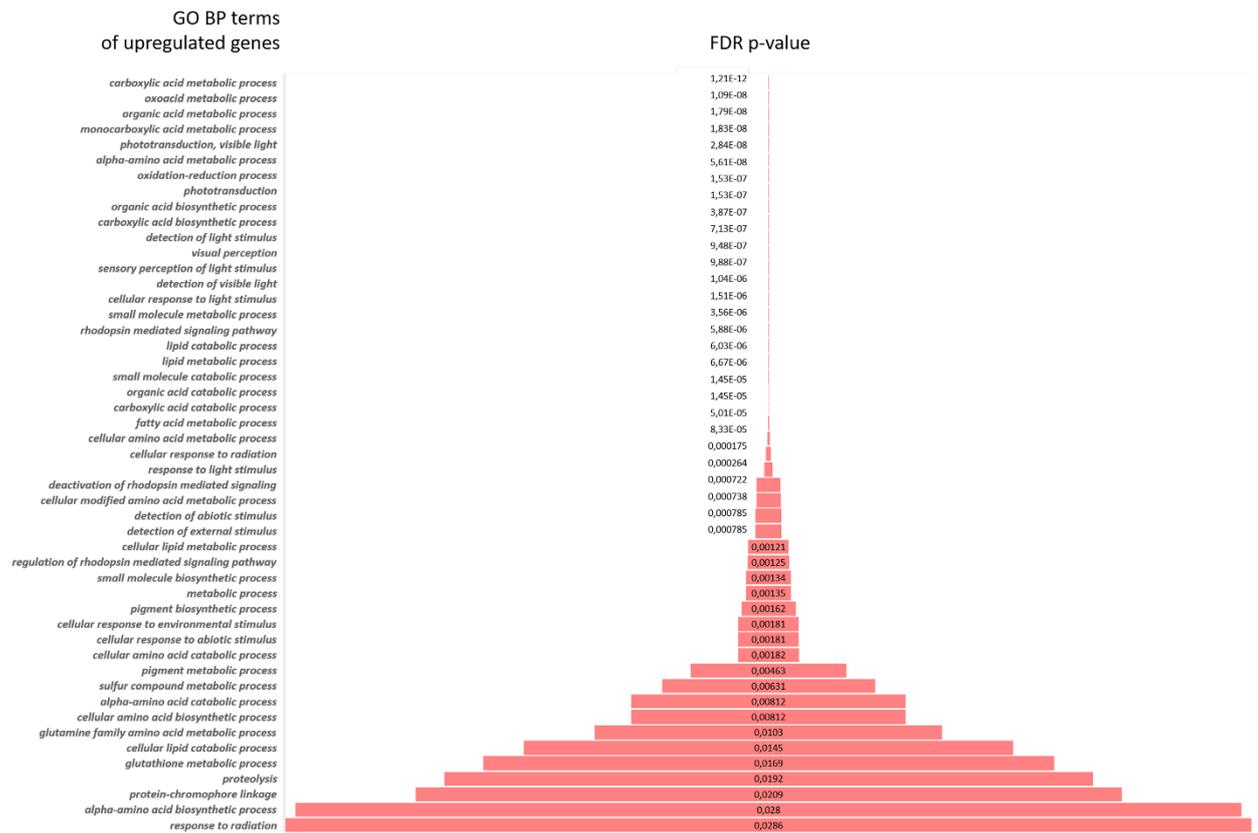

**Figure S2.** Downregulation of *sws* in glia (*repo-GAL4;UAS-sws-RNAi*) results in the mushroom body defects. (A) Confocal images of adult MB lobes in control flies (*repo-GAL4/+*) marked by FasII antibodies (magenta). (B) Upon *sws* downregulation in glia (*repo-GAL4;UAS-sws-RNAi*), MB lobes appear to be reduced.

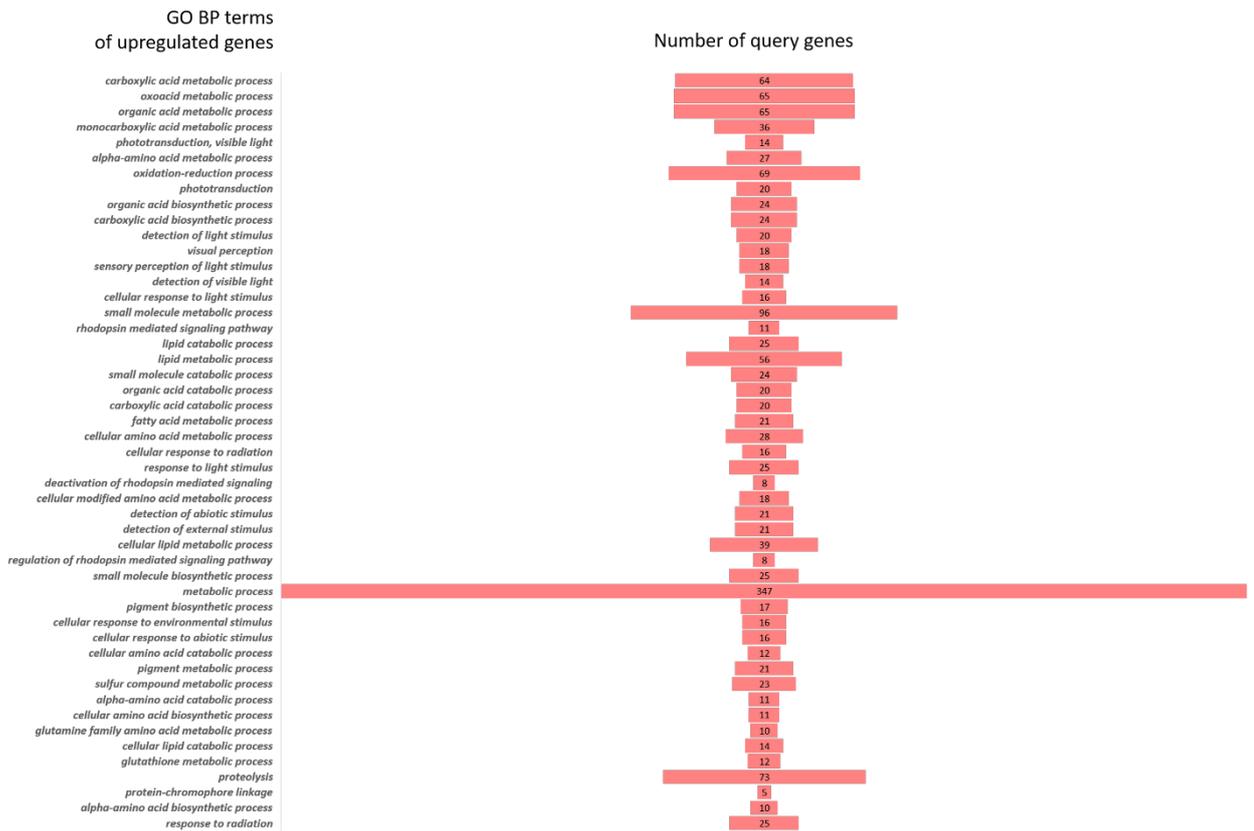

**Figure S3.** GO BP processes under the control of downregulated genes in 25-day-old neuronal *sws* knockdown males (*elav-GAL4;UAS-sws-RNAi*) compared to *CantonS* control and respective FDR-adjusted p-values of functional enrichment analysis in g:Profiler software.

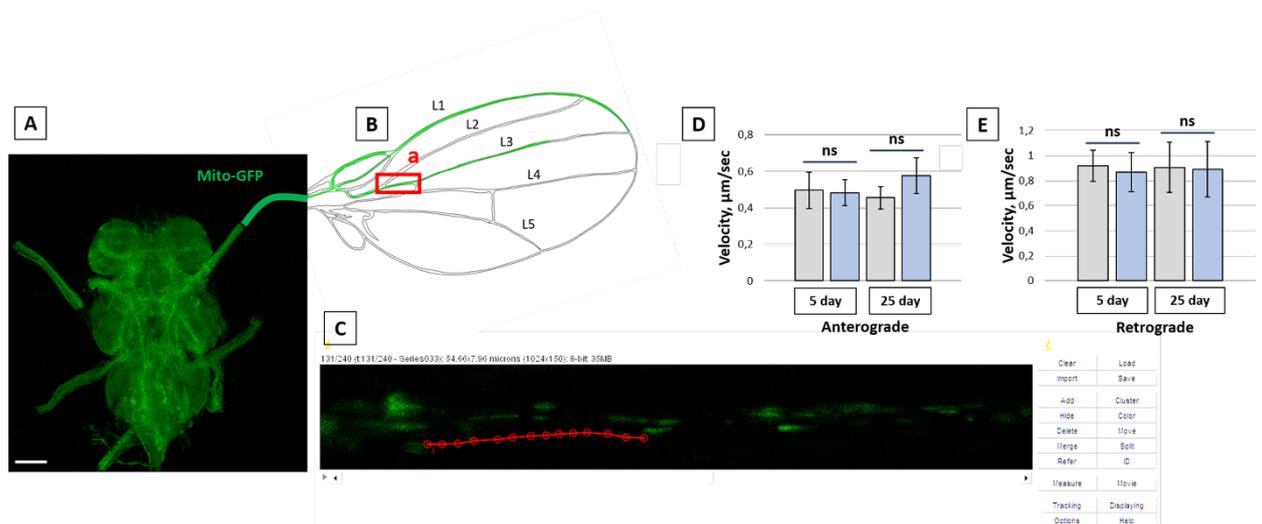

**Figure S4.** GO BP processes under the control of downregulated genes in 25-day-old neuronal *sws* knockdown males (*elav-GAL4;UAS-sws-RNAi*) compared to *CantonS* control and respective query gene number from functional enrichment analysis in g:Profiler software.

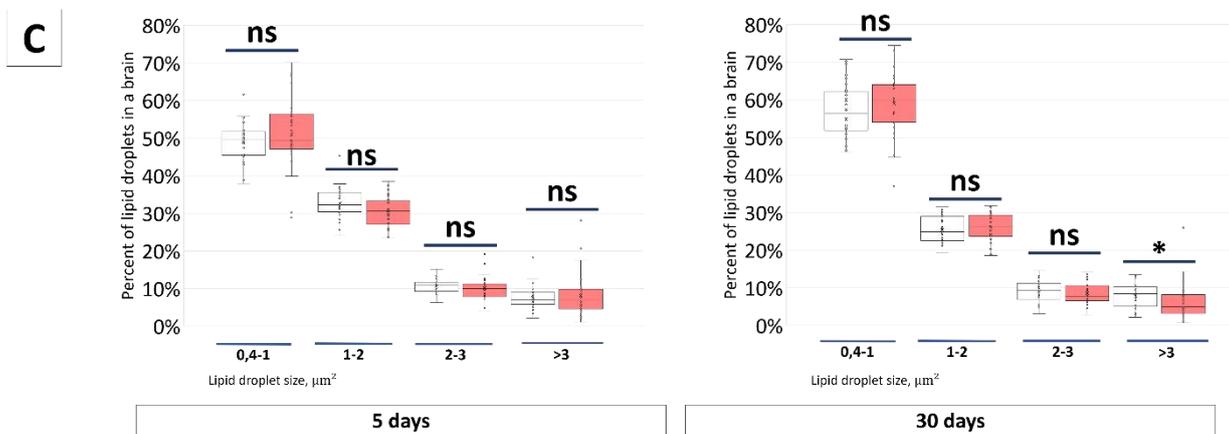

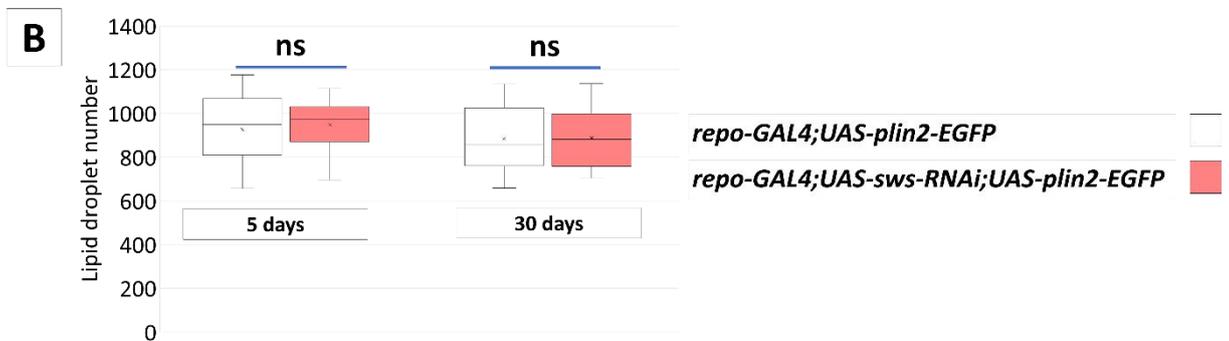

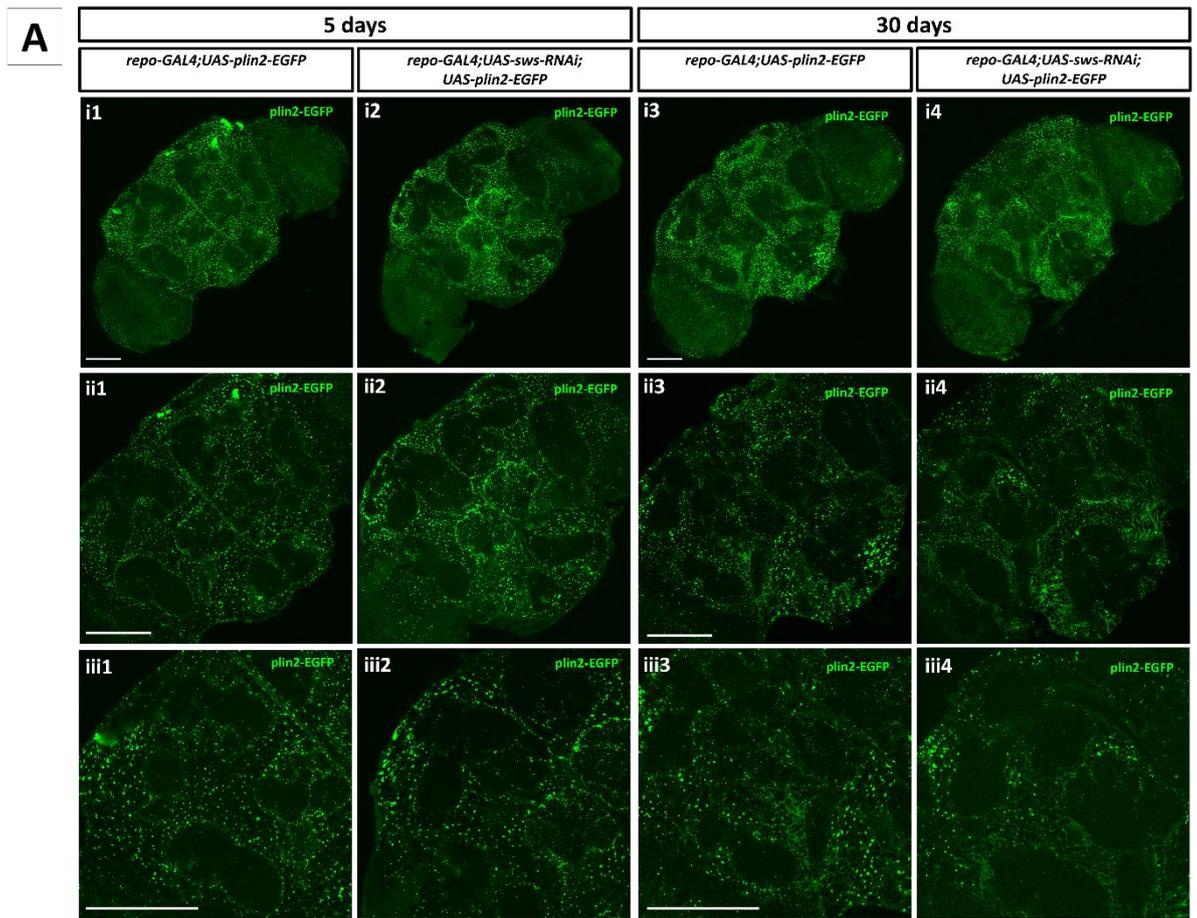

**Figure S5.** GO BP processes under the control of upregulated genes in 25-day-old neuronal *sws* knockdown males (*elav-GAL4;UAS-swS-RNAi*) compared to *CantonS* control and respective FDR-adjusted p-values of functional enrichment analysis in g:Profiler software.

**Figure S6.** GO BP processes under the control of upregulated genes in 25-day-old neuronal *sws* knockdown males (*elav-GAL4;UAS-swS-RNAi*) compared to *CantonS* control and respective query gene number from functional enrichment analysis in g:Profiler software.

**Figure S7.** Analysis of axonal transport in the wing neuron. (A) 3-dimensional confocal images of a ventral nerve cord of the 5-day-old control (*elav-GAL4;UAS-mito-GFP/+*) flies where GFP (green) is localised in mitochondria. Scale bar: 50  $\mu\text{m}$ . (B) *Drosophila* wing fly structure scheme, (a, red region) – the area for mitochondrial transport velocity measurements. (C) The tracking for calculating mitochondrial transport velocity using ImageJ (MTrackJ plugin). (D) Anterograde and (E) retrograde mitochondria transport velocity ( $\mu\text{m}/\text{sec}$ ) in the wing axons of the 5-day-old and 25-day-old control (*elav-GAL4;UAS-mito-GFP/+*) and *sws* knockdown (*elav-GAL4;UAS-mito-GFP/UAS-swS-RNAi*) flies. Mean  $\pm$  95% CI, Student t-test, ns – no significant difference ( $p > 0.05$ ),  $N = 25$ .

**Figure S8.** Analysis of lipid droplets in glia of the fly brain. (A) Single confocal images of the central brain of the control (i-iii1, i-iii3, *repo-GAL4;UAS-plin2-EGFP*) and knockdown (i-iii2, i-iii4, *repo-GAL4;UAS-sws-*

*RNAi;UAS-plin2-EGFP* flies of 5 (**i-iii1, i-iii2**) and 30-day-old (**i-iii3, i-iii4**) age. Green – GFP embedded in lipid droplets (marked with arrows) via the Plin2 protein in glia. Scale bar: 100  $\mu\text{m}$ . **(B)** The total lipid droplet number in the brain glia of the control (*repo-GAL4;UAS-plin2-EGFP*, white boxes) and knockdown (*repo-GAL4;UAS-sws-RNAi;UAS-plin2-EGFP*, red boxes) flies of 5 and 30-day-old age. Mann-Whitney test, ns – no significant difference ( $p > 0.05$ ),  $N = 30$ . **(C)** Distribution of LD size ( $\mu\text{m}^2$ ) in the brain glia of the control (*repo-GAL4;UAS-plin2-EGFP*, white boxes) and knockdown (*repo-GAL4;UAS-sws-RNAi;UAS-plin2-EGFP*, red boxes) flies of 5 and 30-day-old age. Mann-Whitney test, \*\*\*  $p < 0.001$ , \*  $p < 0.05$ , ns – no significant difference ( $p > 0.05$ ),  $N = 30$ .
