Fig. S1. Purification of RIPs from *C. quinoa* seeds. (a), Elution profile from the CM-Sepharose chromatography showing three main active peaks. (b) and (c), re-chromatography FPLC elution profiles of peak 1 and peak 2, respectively, on an AKTA Purifier System from cation exchange chromatography using a Source 15S PE 4.6/100 column. Experimental conditions are described in the Material and Methods.

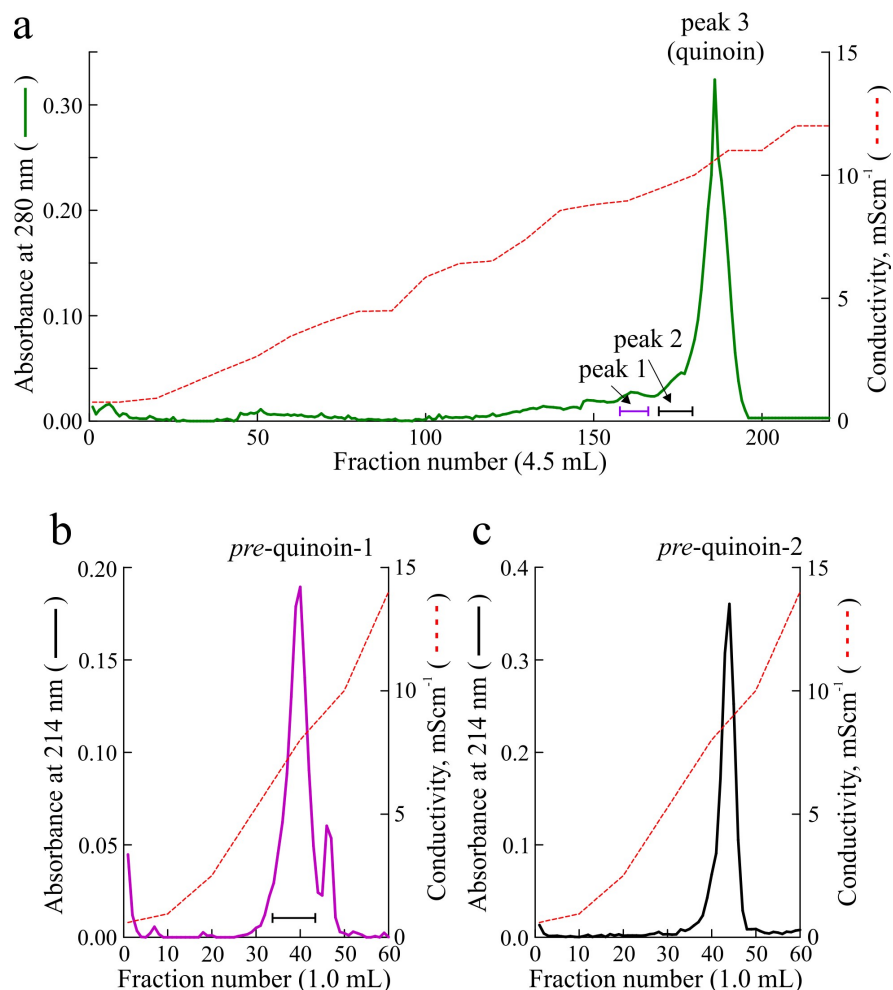

Table S1. Accession numbers, species and common names of ribosome inactivating proteins sequences used in this work for primary structure analyses.

	Accession number	Species	name	Identity/Similarity (%) compared to quinoia	Note
1	Q03464	<i>Phytolacca americana</i> L.	PAP-alpha	40.94/48.81	
2	P34967	<i>Phytolacca dioica</i> L.	PD-S2	38.97/47.24

Fig. S3. Sequence alignment of ribosome inactivating proteins performed using the ClustalW tool (<https://embnet.vital-it.ch/software/ClustalW.html>) with default parameters. Asterisk, colon and dot are identical, conserved and semi-conserved amino acid residues, respectively. For protein information see **Table S1**. Cysteinyln residues are highlighted in red.

Fig. S4. Western blot analysis of quinoin (q1 and q2, 100 and 50 ng, respectively) and PD-S2, PD-L1 and PD-L4 (.1 and .2, 100 and 50 ng, respectively). Purified proteins were separated by SDS-PAGE and subjected to immunoblot analysis using anti-quinoin or anti-PD-S2 (type 1 RIP from seeds of *P. dioica*) rabbit polyclonal antibody.

Fig. S5. Open Reading Frame (ORF) organization of quinoin derived from the genomic sequence NW_018745569.1.

Fig. S6. Representative images of bean cotyledonary leaves infected with TNV alone (a) or TNV mixed to 2.0 or 0.2 $\mu\text{g/mL}$ of quinoin (b, c, respectively) on the adaxial leaf surface, or when inoculated separately from quinoin, the latter applied on the abaxial leaf surface (d).

Fig. S7. Stereo microscopy analyses in order to evidence the antifungal effect of quinoïn at different concentrations against the plant pathogenic fungi *Cryponectria parasitica* strain E4 (a) and *C. parasitica* strain E13 (b). Water, negative control.
