

Figure S4: Effects of SCH772984 (ERKi) compound on ERK1/2 phosphorylation 6h and 12h post CLP procedure. Tissue samples were disrupted in RIPA buffer, lysates were resolved by SDS-PAGE and electrotransferred to PVDF membrane and immunostained with indicated antibodies. The graph (lower panel) shows averaged pERK1/2 abundance normalized to Actb by densitometry analysis of western blotting bands. Means (\pm SD) are presented.
