

Supplemental Figure S1

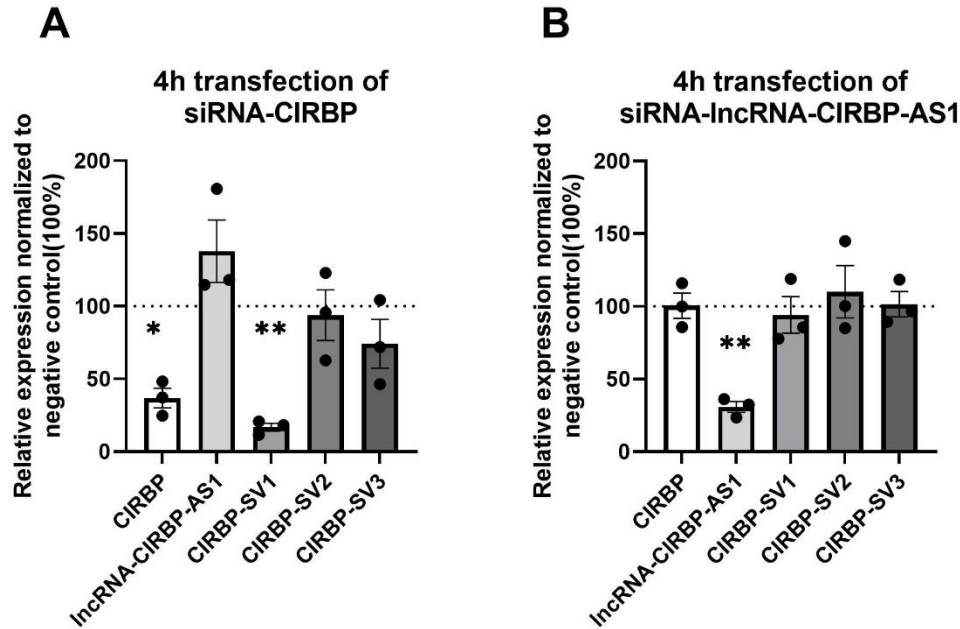

Figure S1. siRNA transfection for 4 hours in HUVECs. (A) Relative expression of total CIRBP, its splice variants, and lncRNA-CIRBP-AS1 after siRNA-CIRBP transfection, normalized to GAPDH. (B) Relative expression of total CIRBP, its splice variants, and lncRNA-CIRBP-AS1 after siRNA-lncRNA-CIRBP-AS1 transfection, normalized to GAPDH. Data show the percentage compared to the siRNA negative control group. Data are presented as mean \pm SEM, * p < 0.05, ** p < 0.01, by one-sample t-tests (two-tail).
