

Figure S2. The heatmaps of gene expression for the key genes identified using DESeq2 under the comparison of different groups, including Female versus Male (a), Early versus Late (b), EF versus EM (c), LF versus LM (d), EM versus LM (e), and EF versus LF (f). Alphabet “E” represents the abbreviation of “Early”, “L” for “Late”, “F” for “Female” and “M” for “Male” in groups.
