

Supplemental Figure S1

Supplemental Figure S1: RealTime-Glo™ MT Cell Viability Assay performed with **A** 5 µg/ml, **B** 20 µg/ml or **C** 50 µg/ml did show normal viability in all treated samples compared to the untreated control over 48 h (**upper row**). No significant differences were observed after 48 h incubation (**lower row**). Plotted: Mean±S.E.M.; n=3; Statistic: one-way ANOVA; n.s. = not significant.
