

Genetic dissection of light-regulated adventitious root induction in *Arabidopsis* hypocotyls

Yinwei Zeng¹, Sebastien Schotte¹, Hoang Khai Trinh^{1,2}, Inge Verstraeten¹, Jing Li¹, Ellen Van de Velde¹, Steffen Vanneste^{1,3,4,†}, Danny Geelen^{1‡}

Supplementary Materials:

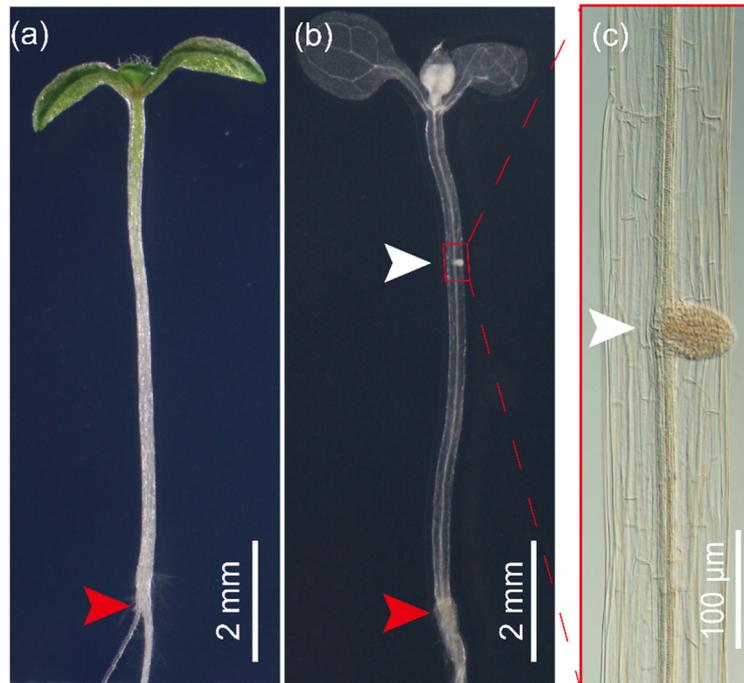

Figure S1. Arabidopsis hypocotyl clearing showing an adventitious root primordium. (a) Phenotype of Col-0 grown in the light for 4 days after 3 days etiolation; (b) Cleared hypocotyl; (c) detailed image of the ARP indicated in (b). White arrowheads indicate ARI site from hypocotyl, the red arrowhead points to the hypocotyl root junction.

Table S1. List of PCR primers.
