##### Compound 3

Analytical HPLC was carried out on an Agilent 1200 instrument equipped with an UV-DAD detector. The chromatographic separation was achieved on an octadecylsilane coated columns, 150 mm × 4.6 mm, 5 µm (Eclipse XDB-C18, Agilent), using isocratic and linear gradient conditions at a flow rate of 1.0 mL/min in three different phases configurations.

## 6. Crystallographic data

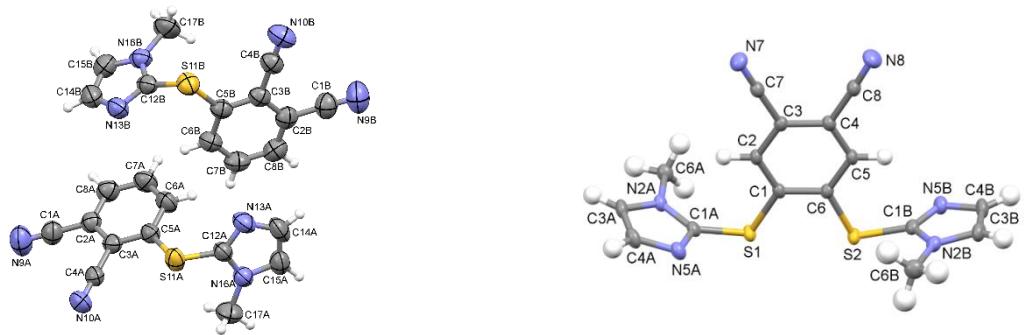

Figure S1. Anisotropic ellipsoid representation of **1** (left) and **2** (right), showing the atom-labeling scheme. Displacement ellipsoids are drawn at the 50% probability level and H atoms are shown as small spheres of arbitrary radii.
