Supplementary Figure S4. Comparison of miRNAs gene expression in peripheral blood leukocytes in early stages of gestation between pregnancies with normal course and those with GDM with respect to the GDM treatment strategies (GDM pregnancies on diet only and GDM pregnancies requiring the combination of diet and administration of appropriate therapy) – non-significant results after the Benjamini-Hochberg correction (but with $\alpha < 0.05$) and non-significant results ($\alpha > 0.05$).
