

Supplementary Figure S1. Efficacy of transcriptional inhibition by DRB. (A) Cleavage and blastocyst rates of PA embryos that were either not treated (CT, n=90) or treated with DRB (DRB, n=93) for the 7 days of culture. (B) DAPI and EU staining of fibroblast cells that were cultured in control medium only (CT) or in presence of DRB, Scriptaid or Scriptaid + DRB for 15h.
