

Figure S1. Glucose monitoring. Time course of blood glucose (A) and ^{18}F FDG (B) levels over 3 hours, showing no significant differences between groups (diamonds = i.p., white squares = oral glucose, black squares = oral glucose + lipids administrations), as per design

Figure S2. Hormones & cytokines. This figure shows hormones and cytokines that did not show significant group differences after 180 minutes from oral or i.p. administrations. Hatched bar = i.p., white bars = oral glucose, black bars = oral glucose + lipid administrations
