

Figure S2. mRNA expression of *Il19* and *Ccl20* in skin tissues from obese and hyperlipidemic mice. RNA samples were extracted from the ear tissues of wild-type and *Apoe*^{-/-} mice that were fed normal or high-fat diet, and gene expression levels were determined by real-time quantitative PCR. Data from the Vaseline-treated groups were extracted from the data presented in Figure 3. WT, wild-type; ND, normal diet; HFD, high-fat diet.
