

Figure S1. TROAP function in 786-O and ACHN cell line. (a, b) Cell proliferation in the shCtrl and shTROAP groups was determined using Celigo and MTT assays. (c) 786-O and ACHN cell migration due to TROAP inhibition was investigated by Transwell assay. The original magnification is 100× *** $P < 0.001$.

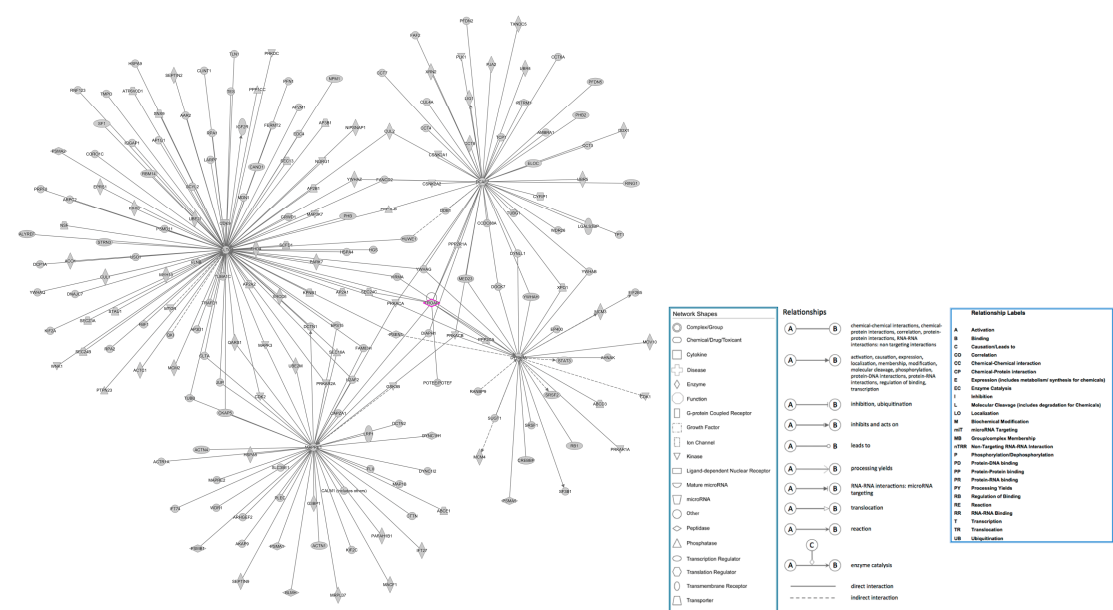

Figure S2. The gene interaction network was based on our results.
