Keywords: cytochrome P450, CYP1A1, CYP1A2, CYP1B1, molecular docking, molecular dynamics simulation studies, polymethoxy-*trans*-stilbenes

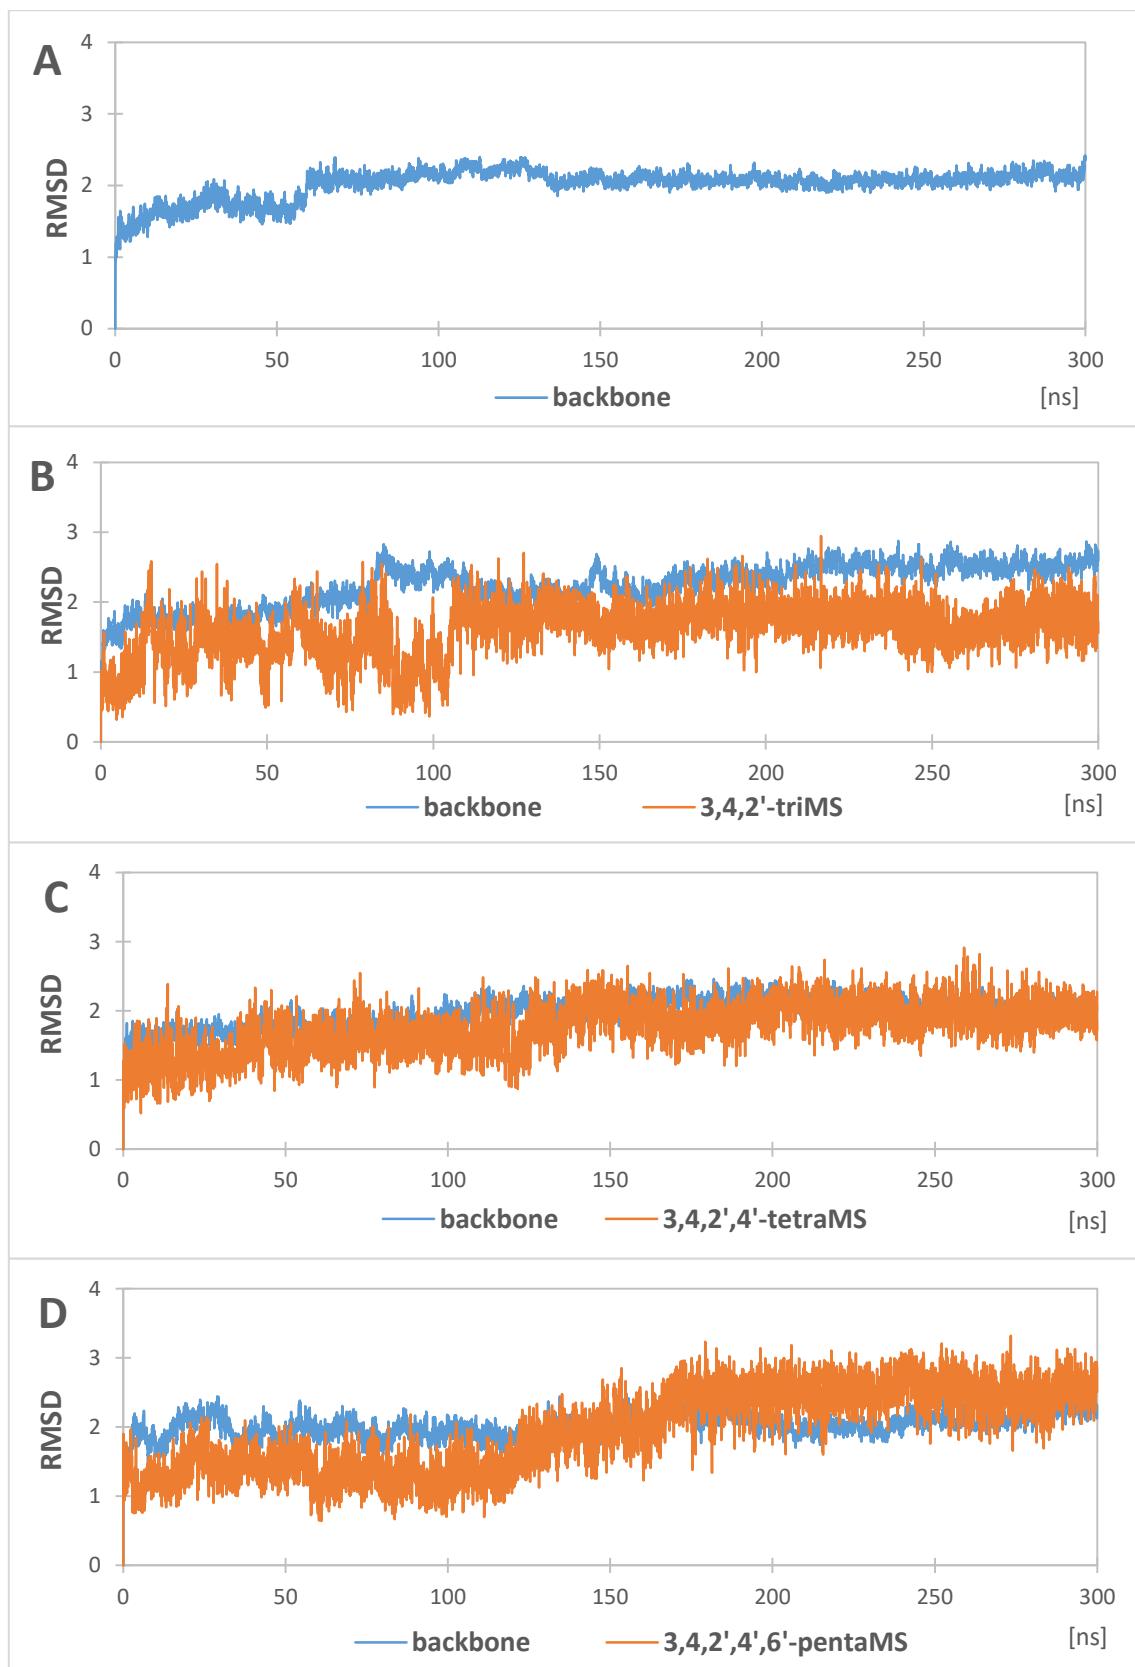

Figure S1. Root mean square deviation of protein backbone (blue line) and ligand (orange line) for CYP1A1 APO (A) and CYP1A1 complexed with 3,4,2'-triMS (B), 3,4,2',4'-tetraMS (C) and 3,4,2',4',6'-pentaMS (D).

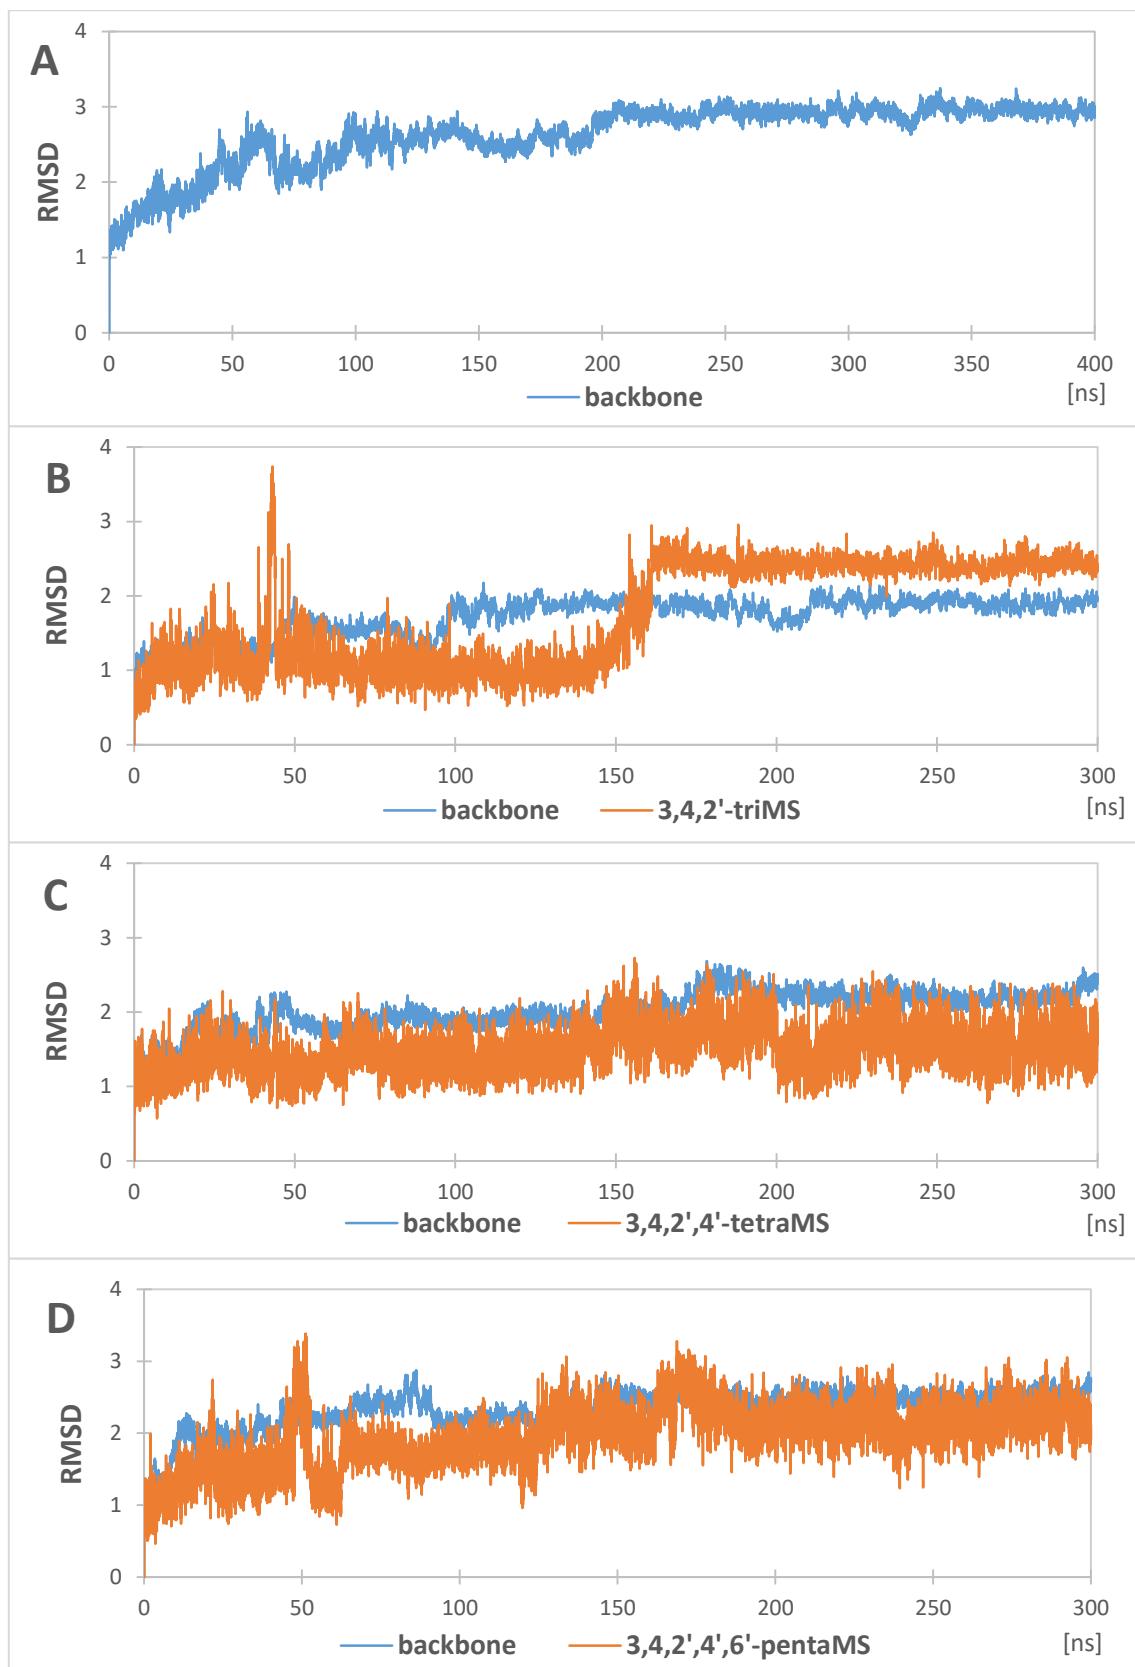

Figure S2. Root mean square deviation of protein backbone (blue line) and ligand (orange line) for CYP1A2 APO (A) and CYP1A2 complexed with 3,4,2'-triMS (B), 3,4,2',4'-tetraMS (C) and 3,4,2',4',6'-pentaMS (D).

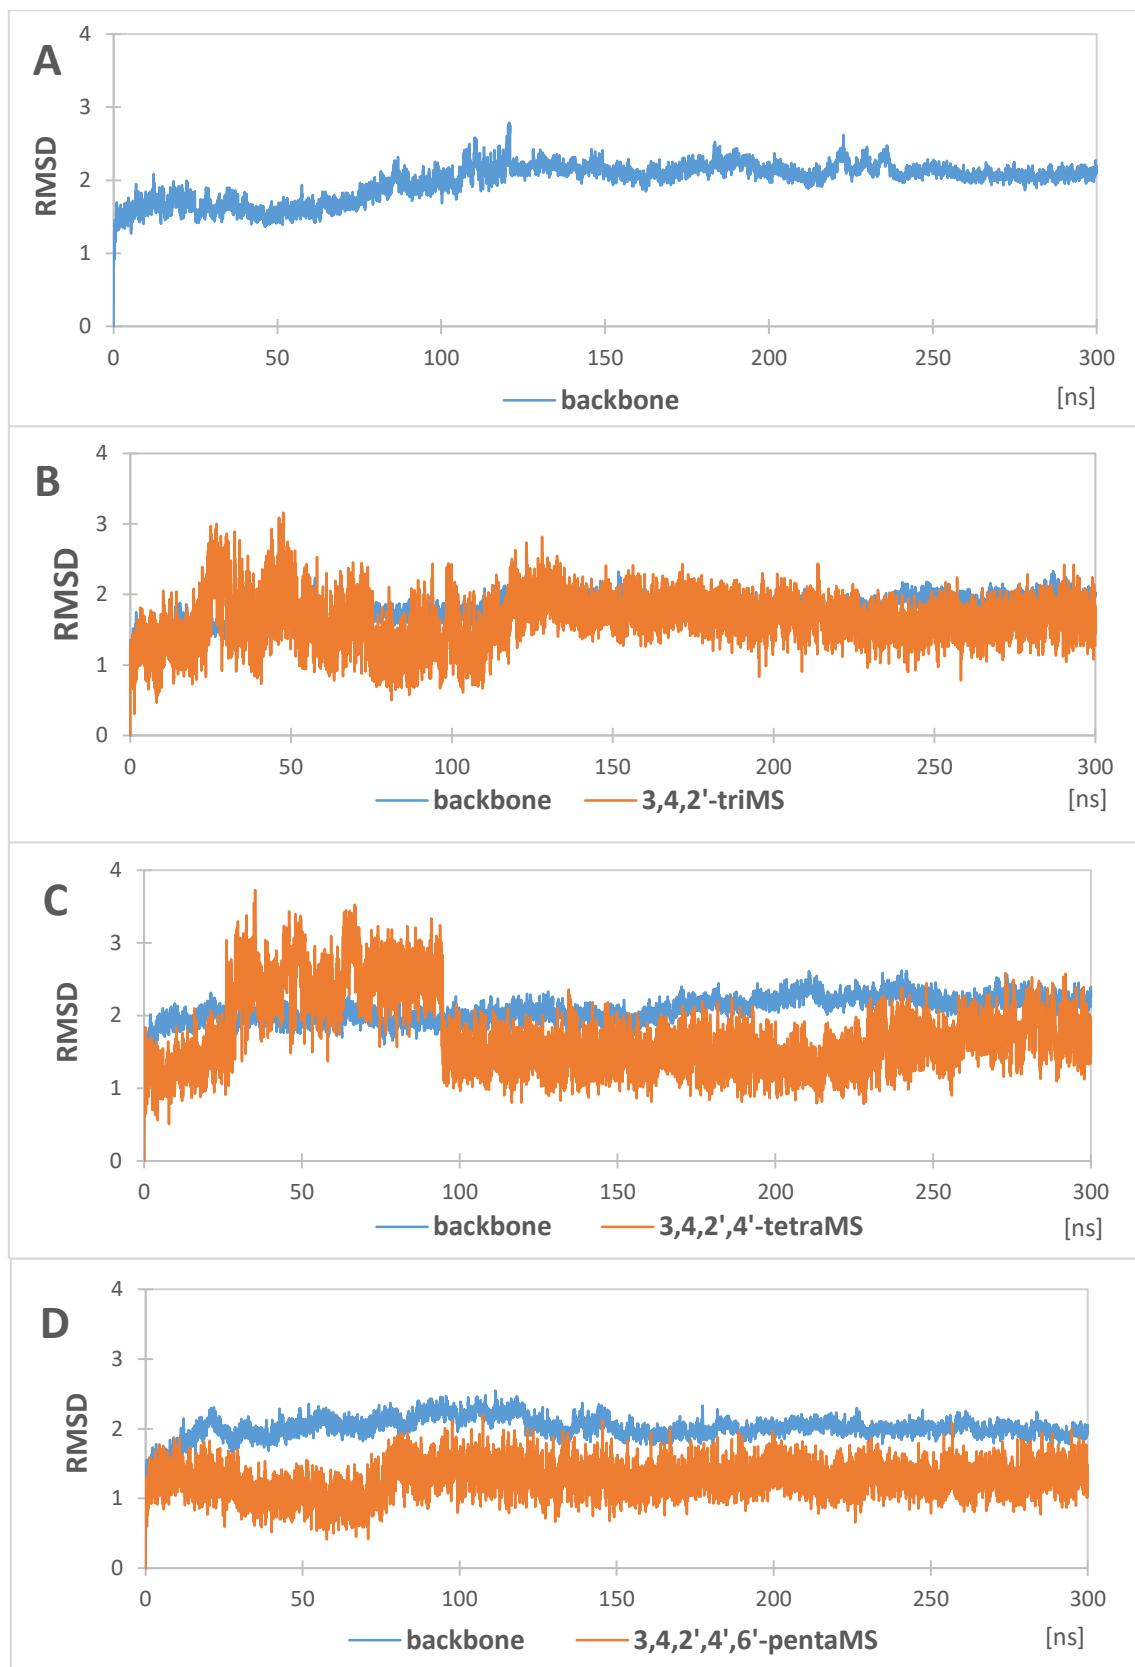

Figure S3. Root mean square deviation of protein backbone (blue line) and ligand (orange line) for CYP1B1 APO (A) and CYP1B1 complexed with 3,4,2'-triMS (B), 3,4,2',4'-tetraMS (C) and 3,4,2',4',6'-pentaMS (D).

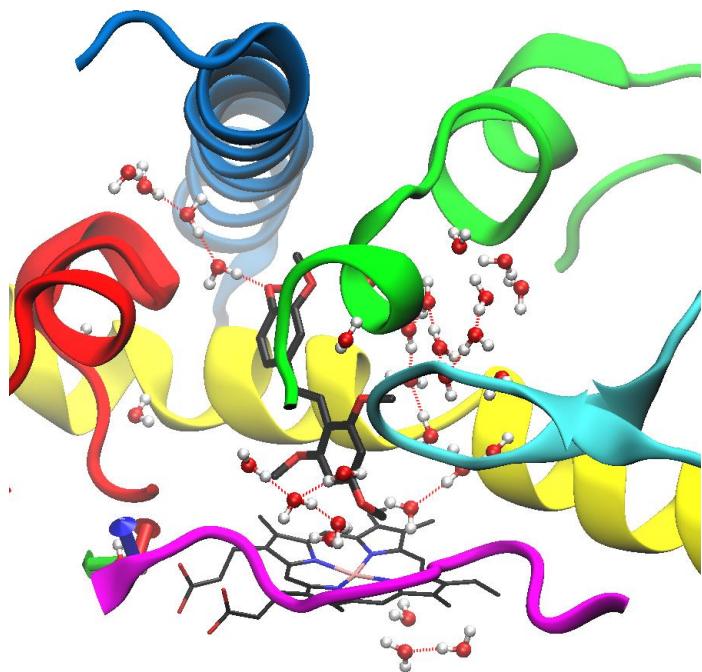

Figure S4. Clusters and chains of water molecules in CYP1A1 complexed with 3,4,2',4',6'-pentaMS.
Structural elements of CYP1A1: BC-loop and B' helix – red, helix F – green, helix G – blue,
helix I – yellow, SRS5 – magenta, and SRS6 – cyan.

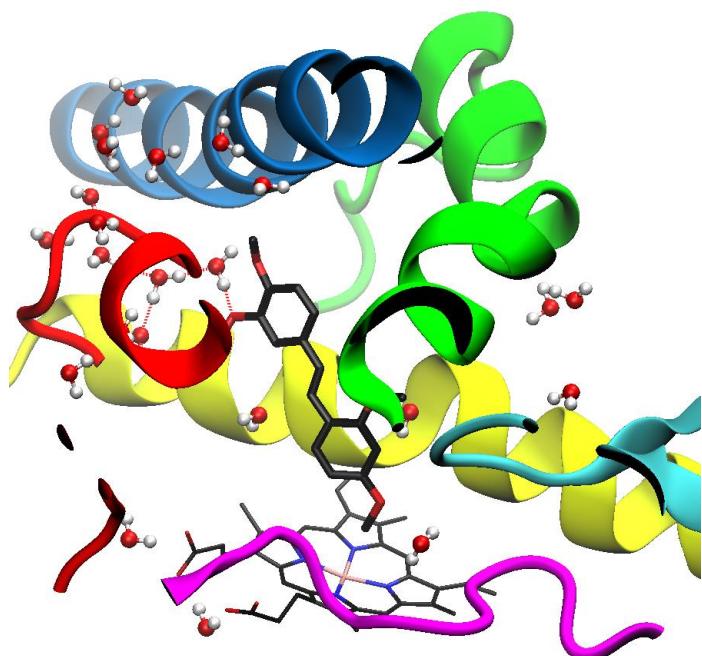

Figure S5. Clusters and chains of water molecules in CYP1A2 complexed with 3,4,2',4'-tetraMS.
Structural elements of CYP1A2: BC-loop and B' helix – red, helix F – green, helix G – blue,
helix I – yellow, SRS5 – magenta, and SRS6 – cyan.

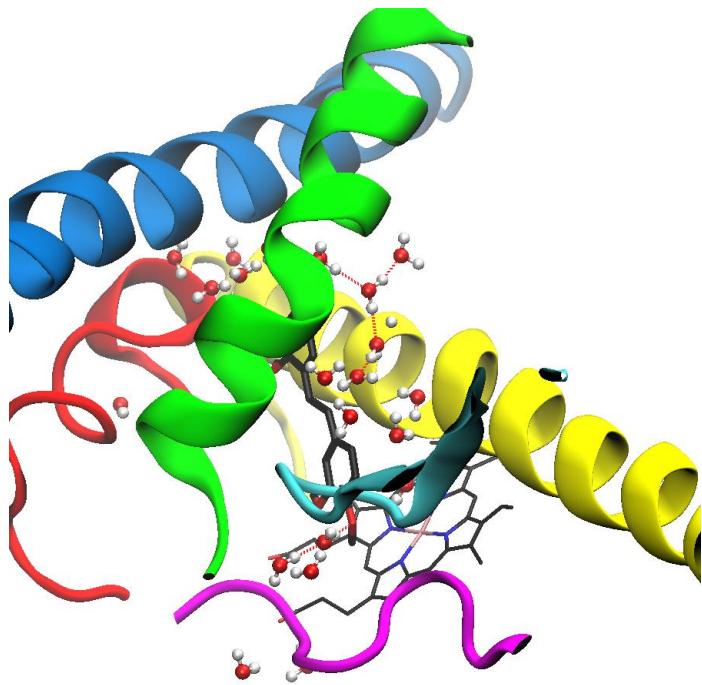

Figure S6. Clusters and chains of water molecules in CYP1B1 complexed with 3,4,2'-triMS. Structural elements of CYP1B1: BC-loop and B' helix – red, helix F – green, helix G – blue, helix I – yellow, SRS5 – magenta, and SRS6 – cyan.

Table S1. Structural changes in substrate recognition sites of CYP1 isozymes complexed with polymethoxy-*trans*-stilbenes and APO forms.

| Region | CYP1A1 | CYP1A2 | CYP1B1 |
|--------|---|--|---|
| SRS1 | The B' helix is slightly moved away from helix G in complex with 3,4,2'-triMS and to a lesser extent in complex with 3,4,2',4'-tetraMS . | B'C-loop and helix B' are slightly moved away from helix G in all complexes . | A slight distortion in the helical structure of helix B' in the Arg124-Gly129 range is observed in all complexes . |
| SRS2 | <p>Helix F is stretched between Asn219 and Val228 in a structure complexed with 3,4,2'-triMS.</p> <p>In complex with 3,4,2',4'-tetraMS, the region Gln212-Asn221 of F helix has visibly moved away from the I helix.</p> <p>In the case of 3,4,2',4',6'-penta MS, five residue disruption of helix F is shortened to three residues from Asn221 to Asn223.</p> | <p>In a complex with 3,4,2'-triMS, the distance between the F and I helices increases due to the shift of the F helix (Leu217-Ala230).</p> <p>Minor changes in the helical structure of helix F, in the Ser218-His224 range, are observed in the complex with 3,4,2',4'-tetraMS.</p> <p>The bound 3,4,2',4',6'-pentaMS ligand causes changes in the F helix between Lys221 and Thr229, increasing the distance between the F helix and SRS6, compared with the X-ray structure.</p> | <p>In all complexes, the ends of helix F are slightly away from helix I than in the X-ray structure. In complexes with 3,4,2'-triMS and 3,4,2',4',6'-pentaMS, these are the N-terminal and C-terminal, respectively.</p> <p>In the complex with 3,4,2',4'-tetraMS, the F helix is bent, and both ends are shifted towards the G helix.</p> |
| SRS3 | <p>In complexes with z 3,4,2',4'-tetraMS and 3,4,2',4',6'-penta MS, helix G approaches helix F from Lys257 to Lys264.</p> <p>The N-terminus of helix G is slightly away from the helix F in complexes with 3,4,2'-triMS and 3,4,2',4',6'-penta MS.</p> | <p>In all complexes, the N-terminal part of helix G, between Pro248-Arg259, moves slightly away from helix F towards helix B'.</p> | <p>In complex with 3,4,2'-triMS helix G, between Asn267 and Asp274, bends towards helix F.</p> <p>The N-terminal helix G is slightly more distant from the F helix than in the X-ray structure in complexes with 3,4,2',4'-tetraMS and 3,4,2',4',6'-penta MS, while C-terminal region does not change its position. This shift is most pronounced for the complex with 3,4,2',4'-tetraMS.</p> |
| SRS4 | <p>In all complexes, slight deformation of helix I in the range Asp304-Leu312 moves it away from SRS1 (B' helix).</p> <p>Additionally, in complex with 3,4,2'-triMS from Gly316 to Thr324, helix I move towards the binding site.</p> | <p>Within Val311-Asp320, there is a slight deformation of helix I in complexes with 3,4,2'-triMS and 3,4,2',4'-tetraMS.</p> | <p>In all complexes, there is a slight disturbance of the helical structure of helix I within Gly329-Thr334, most pronounced for the complex with 3,4,2',4'-tetraMS.</p> |

| Region | CYP1A1 | CYP1A2 | CYP1B1 |
|--------|--|---|--|
| SRS5 | In all complexes, the SRS5 coincides with the X-ray structure. | In all complexes, the SRS5 coincides with the X-ray structure. | In all complexes, the SRS5 coincides with the X-ray structure. |
| SRS6 | In complex with 3,4,2'-triMS , the loop within Pro492-Met498 is moved away from the active center of the enzyme | In a complex with 3,4,2'-triMS , the loop within Ile494-Met499 has moved away from SRS5 towards helix F. | In complexes with z 3,4,2',4'-tetraMS and 3,4,2',4',6'-penta MS , the loop Tyr507-Thr510 approaches the F helix. |

Table S2. RMSD values in CYP1A1 SRSSs calculated for protein backbone between the averaged structures obtained in the simulations and the reference structure (X-ray). The intensity of the red color in the entire table correlates with the RMSD value.
