

Supplementary Table S1. Effect of studied stimulants applied at the beginning of flowering (I term) or at full flowering stage (II term) on volume of nectar in flowers of buckwheat PA15 plants [$\mu\text{l}/50$ flowers], nectar weight [$\text{mg}/50$ flowers], glycerol content, total sugars [mg cm^{-3}] and the percentage share of individual sugars in the total pool of soluble carbohydrates [%]. Means ($n=3$) for each parameter within each term marked with the same letter do not differ significantly (multiple Duncan's test; $p<0.05$).

Stimulant	Volume of nectar [$\mu\text{l}/50$ flowers]	Mass of nectar [$\text{mg}/50$ flowers]	Glycerol [mg cm^{-3}]	Percentage content of individual sugars [%]				Total sum of sugars [mg cm^{-3}]
				Glucose	Fructose	Sucrose	Fructans

BAP – 6-benzylaminopurine; NAA – 1-naphthaleneacetic acid; cysteine, GA₃ – gibberellic acid, NaCl – sodium chloride), ASAHI SL and TYTANIT – commercial prepartates. Data marked with green colour show positive effect of stimulant comparing to control value separative for each control.
