

Supplementary Table S1: Response of different YUMM cells to vemurafenib treatment.

		IC ₅₀ of Vemurafenib (μM)		
Cell line name	Genotype	P	R	Fold change*
YUMM1.7	<i>Braf</i> ^{V600E/wt} <i>Pten</i> ^{-/-} <i>Cdkn2</i> ^{-/-}	0.4	10	33 ± 6.7
YUMMER	<i>Braf</i> ^{V600E/wt} <i>Pten</i> ^{-/-} <i>Cdkn2</i> ^{-/-}	0.2	5.1	23 ± 5.7
YUMM3.3	<i>Braf</i> ^{V600E/wt} <i>Cdkn2</i> ^{-/-}	0.7	5.7	8.0 ± 3.4
YUMM5.2	<i>Braf</i> ^{V600E/wt} <i>P53</i> ^{-/-}	2.8	14.4	5.0 ± 1.0
YUMM1G.1	<i>Braf</i> ^{V600E/wt} <i>Pten</i> ^{-/-} <i>Cdkn2</i> ^{-/-} <i>Mcl1</i> ^{e/e}	1.9	1.8	-
YUMM4.1**	<i>Pten</i> ^{-/-} <i>Cdkn2</i> ^{-/-}	34	34	-

P, Parental; R, Resistant

*, Fold change is the mean of change in IC₅₀ of the biological replicates

**, BRAF^{WT}

Supplementary Table S2 Fitted inhibition curve parameter values for Vemurafenib with varying concentrations of CCG-25708. Non-linear least squares fitted parameters for Vemurafenib concentration response curves in the presence of CCG-257081 are shown. The data were fitted in Graph Pad Prism 9.0 to a three-parameter model (i.e., Hill slope constrained to 1.0) with Bottom values constrained to be ≥ 0 .

	[CCG-257081] Parameter	0 μ M	0.45 μ M	0.9 μ M	1.8 μ M	3.75 μ M	7.5 μ M	15 μ M

Supplementary Figure Legends

Supplementary Figure S1: Resistant YUMM cells have increased surface area and Expression levels of Rho proteins. **a:** Vem-sensitivity of parental BRAF^{V600E} cell lines (YUMM1.7 and YUMMER) and BRAF^{Wildtype} (YUMM4.1). Cells were treated with increasing concentrations of Vem for 72 hours in DMEM with 10% FBS. An ATP-based assay (see Materials and Methods) was used to calculate cell viability relative to DMSO-treated cells. **b:** The surface area of YUMM cells: Fixed cells were stained with vimentin, and the area was calculated using 40X objective microscopic images by ImageJ. * $p < 0.05$; **** $p < 0.0001$. **c-d:** Expression levels of Rho A (b) and Rho C proteins (c) were assessed by immunoblotting 30 μ g total protein of whole cell lysates and normalized to β -tubulin. The results represent the mean \pm SEM of four independent experiments. Graphs show normalized levels of Rho proteins of resistant cells calculated by ImageJ, and fold-change was calculated relative to YUMM1.7_P cells.

Supplementary Figure S2: Magnified Rhodamine phalloidin stained YUMM cells. Fixed cells were stained with Rhodamine Phalloidin. Images represent 1.5X magnification of different actin rearrangements: **a:** Enrichment of actin stress fibers, **b-c:** Cells displayed with cortical actin and depleted of actin stress fibers.

Supplementary Figure S3: Nuclear enrichment of MRTF-A. Western blot analysis of MRTF-A cytoplasmic fraction (C) and nuclear fraction (N) of indicated cell lines; P, parental; R, resistant. About 20 μ g protein was loaded for each fraction. β -tubulin served as a cytoplasmic marker; histone H3 was used as a nuclear marker.
