

Z-stack images

Supplemental Figure S1. Effects of *ompR* deletion on curli fimbriae formation and YccT localization. A wild-type (WT) strain and a strain with an *ompR* deletion ($\Delta ompR$) were transformed with pBADyccT-sfGFP and grown in LB medium in the presence of 0.02% (final concentration) arabinose at 37° C for 2 hours. The membranes of the *E. coli* cells were stained with FM4-64. Various images from the Z-stack (top, middle, and bottom images) of the cells are presented.
