Supplementary Materials

List of materials included:

Figures:

Figure S1. Baseline characteristics of db/db mice.

Figure S2. Cytokines in plasma.

Tables:

Table S1. Diet formulations.

Table S2. Primers used for RT-qPCR on liver and fat tissue.

Table S3. Primers used for RT-qPCR on islets.

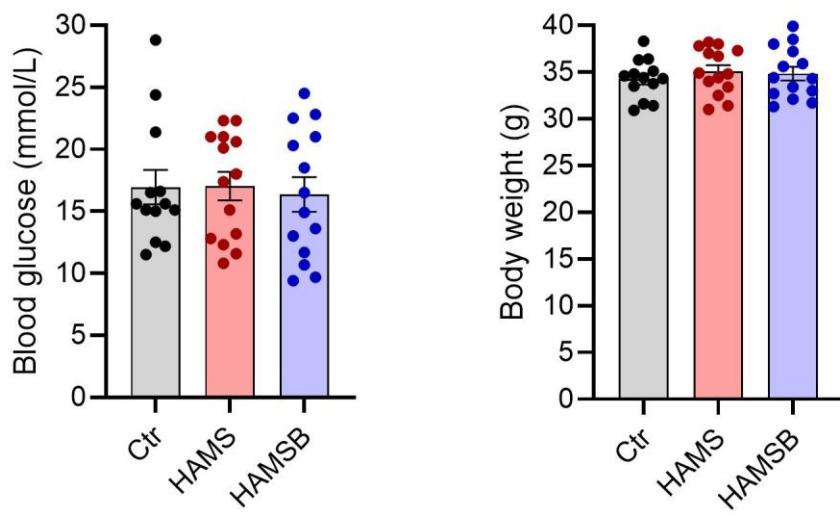

Figure S1. Baseline characteristics of db/db mice. Blood glucose (fed) and body weight were measured before initiation of the diet intervention. Bars show mean \pm SEM for the three different diet groups: Ctr, HAMS and HAMSB. Ctr, Control; HAMS, high-amylose maize starch; HAMSB, butyrylated HAMS

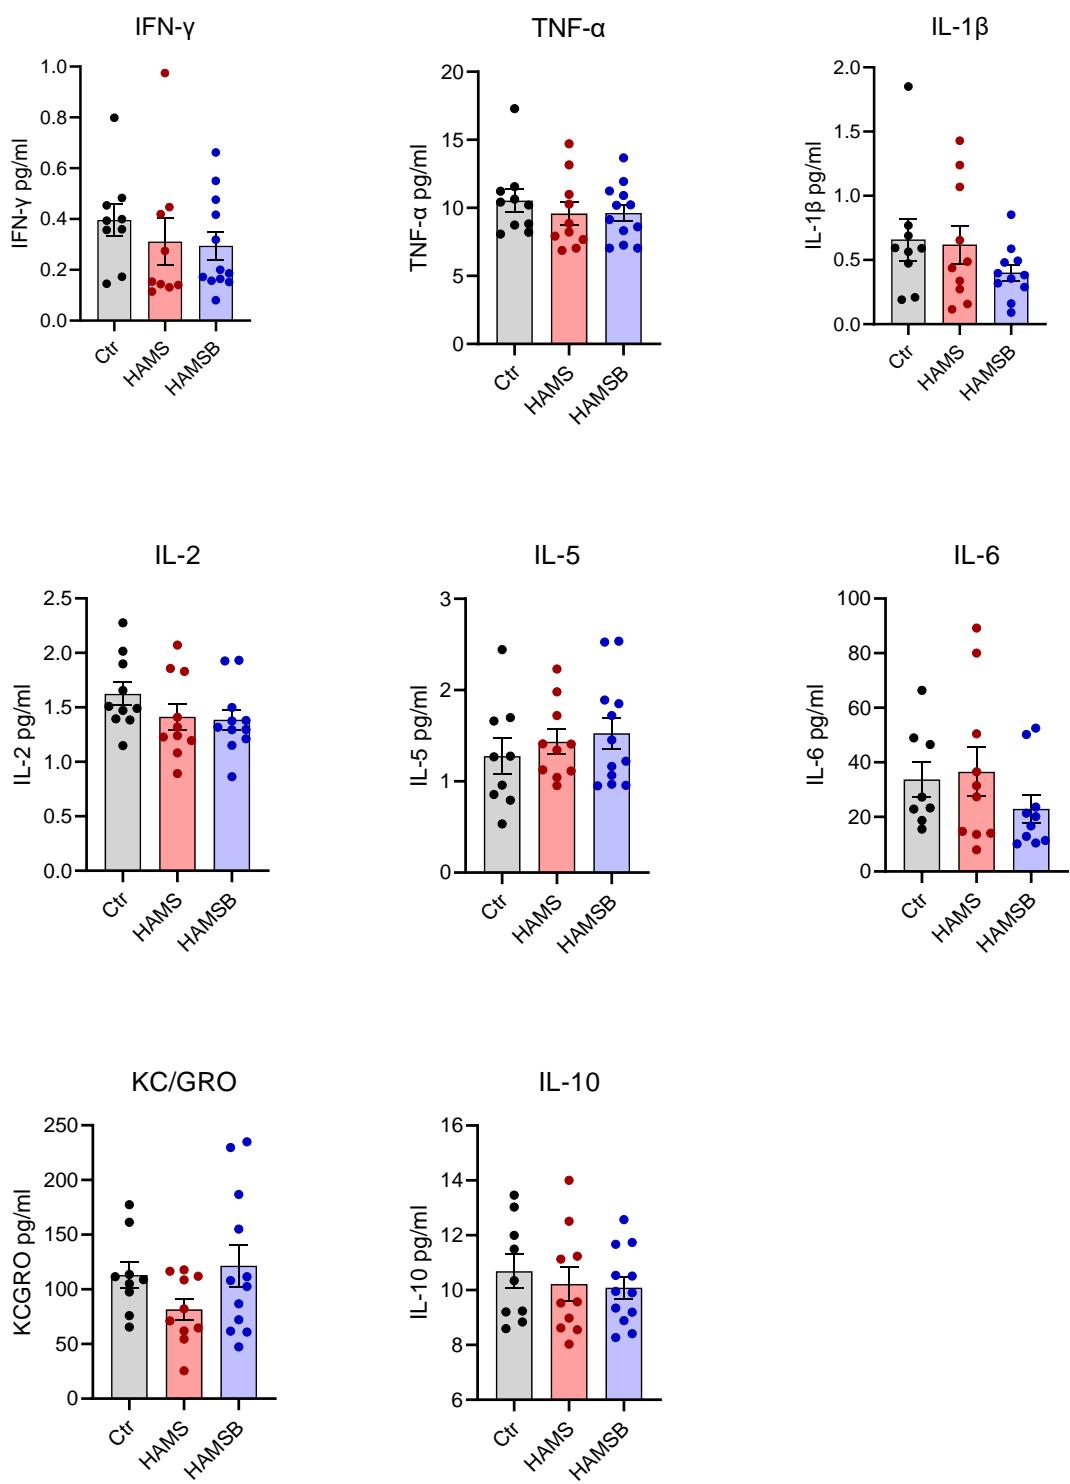

Figure S2. Cytokines in plasma. Db/db mice were fed three different diets: Ctr, HAMS or HAMSB. After 5 weeks on diet, plasma was collected for analysis of interferon gamma (IFN- γ), tumor necrosis factor alpha (TNF- α), interleukin-1 beta (IL-1 β), interleukin-2 (IL-2), interleukin-5 (IL-5), interleukin-6 (IL-6), keratinocyte chemoattractant/human growth-regulated oncogene (KC/GRO) and interleukin-10 (IL-10). Bars show mean \pm SEM.
