

**Figure S1.** SDS-polyacrylamide gel of purified IND-like MBL and MBL β-lactamases from *Chryseobacterium* sp. genomic libraries. (A) IND-17 MBL and (B) CHM β-lactamases purified using Ion exchange chromatography. M - PageRuler™ Unstained Broad Range Protein Ladder (Thermo Scientific™), 5 μg, 2.5 μg, 1 μg and 0.5 μg – purified proteins. IND-17 was purified to >95% purity, CHM was purified to >85% purity as judged from 5 μg protein in gel electrophoresis.
