

## Supplementary Data

# Physicochemical Properties and Antioxidant Activity of CRISPR/Cas9 Edited Tomato *SGR1* Knockout (KO) Line

Jin Young Kim <sup>1</sup>, Dong Hyun Kim <sup>1</sup>, Me-Sun Kim <sup>2</sup>, Yu Jin Jung <sup>1,3,\*</sup> and Kwon Kyoo Kang <sup>1,3,\*</sup>

## Contents

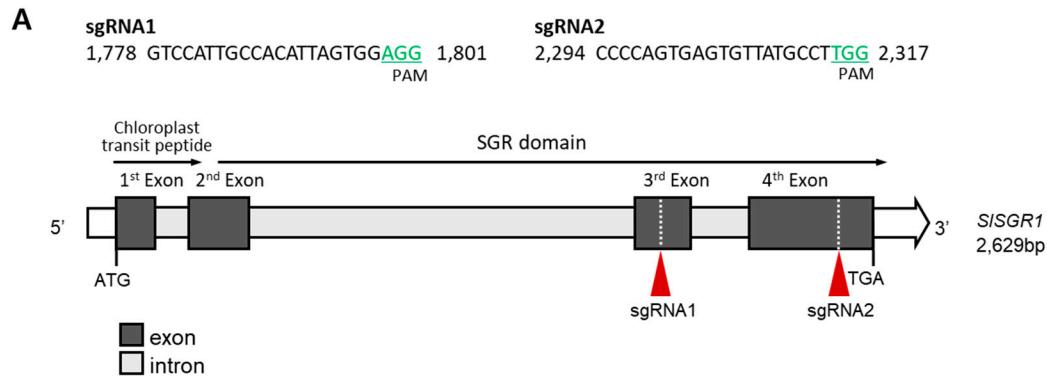

**Figure S1.** DNA sequence analysis of *sgr1* null lines. (A) Genetic map of *SISGR1*. Red triangle indicates the position of sgRNA. (B) Sanger sequencing analysis. Blue letters indicate sgRNA, underline indicates PAM region, Asterisks indicates deleted base. (C) A schematic diagram of genes and primers in the T-DNA region of the pKAtC vector. Red arrows indicate PCR amplified DNA region and size. Published in reference from [9], International Journal of Molecular Sciences.

**Figure S2.** Antioxidant contents of WT and *sgr1* null lines at the ripening development stage. (A) Lycopene and  $\beta$ -carotene contents, (B) Chlorophyll *a* and *b* contents. The bars show a significant difference (\* $0.01 < p < 0.05$ , \*\* $0.001 < p < 0.01$ , \*\*\* $p < 0.001$ ) between WT and *sgr1* null lines (Bonferroni's test). Vertical bars show the standard error of the mean for three replicates.

**Table S1.** The primers list used in this study.

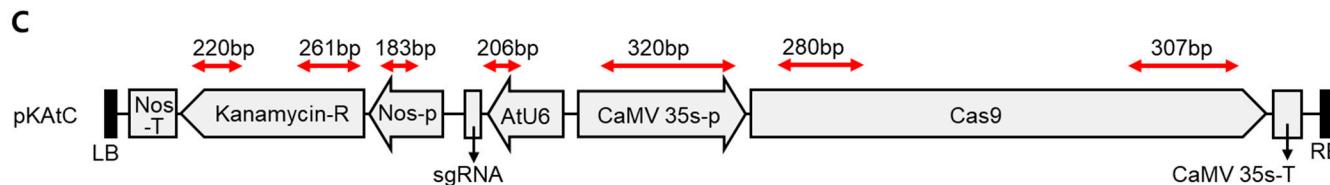

**Table S2.** Antioxidant content during fruit development stages (Br, Br+7, Br+10) of WT and *sgr1* null lines.

**Table S3.** Growth characteristics of WT and *sgr1* mutants.

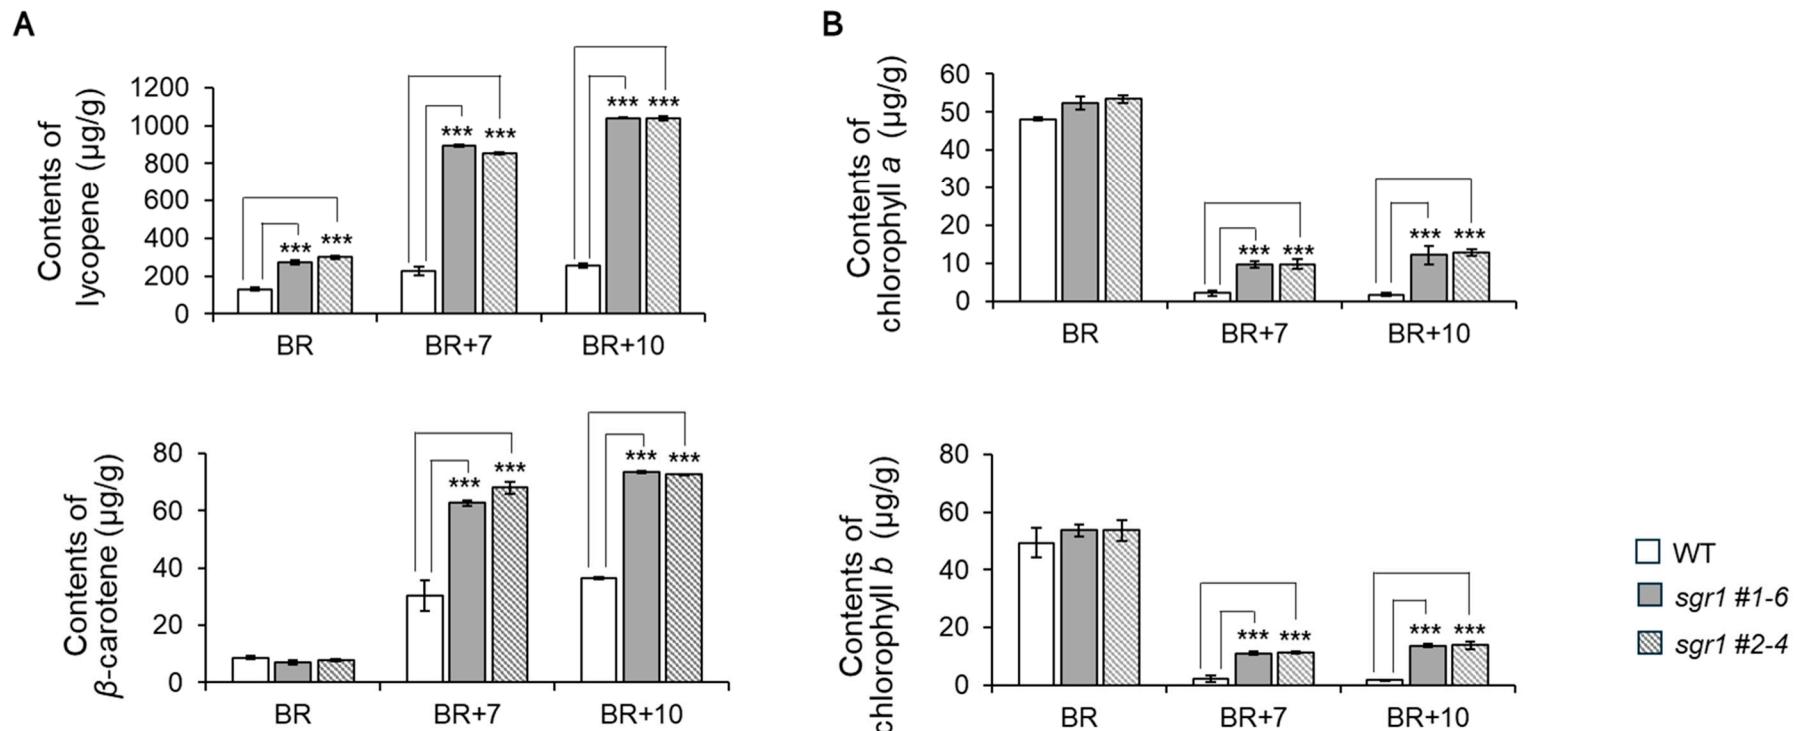

**B**
