

A**B**

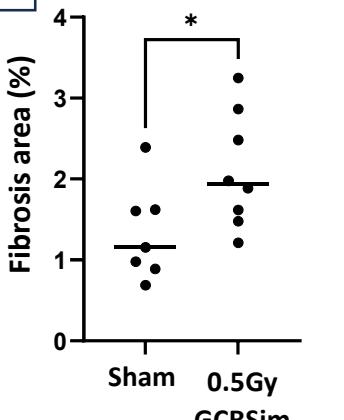

Supplemental Figure S1. **(A)**: Brain MRI image from a 0.75 Gy GCRsim irradiated M Tg mouse. Yellow segmentation outlines the cortex, blue segmentation outlines the lateral ventricles, and purple segmentation outlines the hippocampus. **(B)**: MRI images of the heart from the same mouse. The image on the left represents end diastole, whereas the image on the right shows end systole. Red segmentation outlines the volume of the ventricle at these two phases.

I Sham Animals (Heart)

J WT Animals (Kidney)

Supplemental Figure S2. (A-D) Images of heart sample from a 0.75 Gy gamma F WT mouse. Fibrosis = 3.433%. Masson's trichrome, (A); PSR (B – D). 2x (A, B); 10x (C – D). (E-H) Images of kidney sample from a 2 Gy gamma M WT mouse. Fibrosis = 3.133%. H&E, (E); PSR (F – H). 1.25x (E, F); 10x (G, H). (I) Comparison between WT vs APP/PS1 sham animals. (J) Comparison between WT animals, sham and irradiated (low-dose GCRSim).

Supplementary Table S1: Summary of statistically significant differentially expressed genes in mouse heart and kidney
