**Figure S1 A, B, C, D.** Daily body temperature before and after inoculation (0 dpi) in mock-inoculated controls (A) and goats inoculated with the LD (B), MD (C) and HD (D) of *M. bovis*. Individual animals of each group are color coded. Increased fluctuation and mild fever are seen in all goats inoculated with *M. bovis* between 20 dpi and 50 dpi and in the HD-group until 140 dpi. Fever peaks occur in all goats inoculated with *M. bovis* after the application of SICCT at 143 dpi.

**Table S1.** Number and volume of pulmonary lesions detected by CT-Scans as hyperdense lesions or caverns
