Table S1. Detailed ceramides and sphingomyelin composition and quantification of liver extracts from vehicle ($n = 8$)- or TriMetChalc (65 mg/kg BW, $n = 8$)-treated *ob/ob* mice. Statistical differences were examined by Student's paired *t*-test. *p* values are reported in the last column. A *p* value < 0.05 denotes statistical significance between vehicle- and TriMetChalc-treated mice.
