Table S1 and S2. IC₅₀ values obtained in HCT116, HT29, MCF7, and MDA-MB231 cell lines following 24h treatment with **MB**, **lipoPDA** and **lipoPDA@MB**, 1h irradiation, 24h incubation in drug-free medium and MTT assay (mean ± S.D of 3-4 independent experiments; °p<0.05, °°p<0.01, °°°p<0.001 vs **MB** same condition; **p<0.01, ***p<0.001 vs MB same condition and MB or lipoPDA@MB dark)

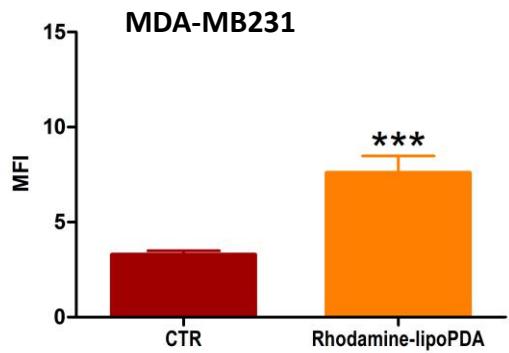

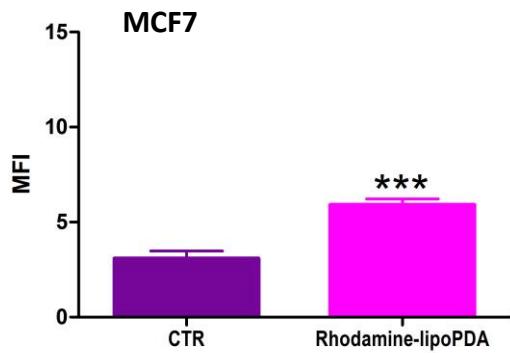

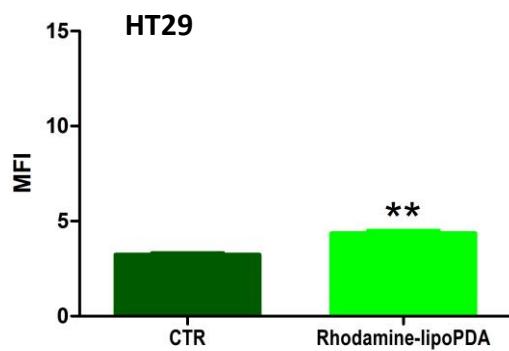

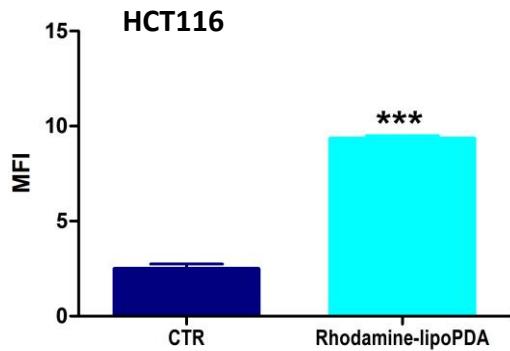

S2 – Survival fractions obtained in WH1 fibroblast cell line following 24h treatment with **MB** and **lipoPDA@MB**, 1 h irradiation, and 24h incubation in drug-free medium in the dark. (mean \pm S.D. of 3 independent experiments).

A**B**

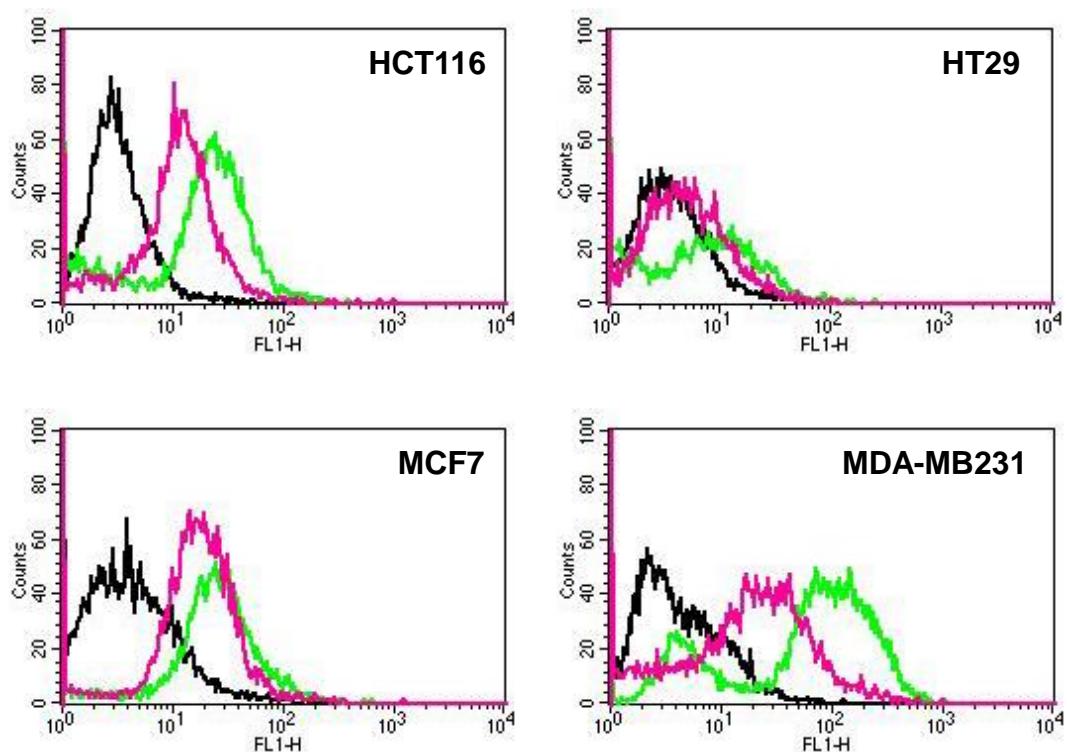

S3 – HCT116 (A) and MCF7 (B) spheroids following 24h treatment with **MB** and **lipoPDA@MB** at concentrations corresponding to the IC₅₀ values obtained in monolayer-cultured cells, 1 h irradiation, and incubation in drug-free medium in the dark. Pictures of spheroids were performed immediately after irradiation (time 0) and 72 h later.

Sample	Mean diameter (nm)	PDI	ζ -potential (mV)
Rhodamine-lipoPDA	52.3 ± 0.6	0.211 ± 0.010	- 13.8 ± 1.7

Table S3. Colloidal characterization of the Rhodamine-lipoPDA vesicles

S4. Intracellular accumulation of Rhodamine-lipoPDA. (mean \pm S.D. of 3 independent experiments; **p<0.01 and ***p<0.001 vs controls).

S5 – Representative images of ROS levels in HCT116, HT29, MCF7, and MDA-MB231 cells following 24h treatment with **MB** and **lipoPDA@MB** at concentrations corresponding to the respective IC₅₀ values, 45' incubation with H2DCF-DA (10 μ M), 2 min irradiation, and flow cytometry analysis (black line: CTR; pink line: **MB**; green light: **lipoPDA@MB**).
