

## Supplementary Figure S1

**Supplementary Figure S1.** HUVECs were reverse transfected with siPDIA-4 or scrambled control and incubated in complete EGM-2 medium for 72hrs. Proteins were extracted and western blot was performed targeting eNOS, p-eNOS or GAPDH (A), AKT, p-AKT or GAPDH (B), and bands were quantified (B, C, E) (n=5-7). ns=non-significant.
