

Table S8: Demographic parameters obtained by DIYABC analysis¹ of *Dipterocarpus turbinatus*. N1, N2, N3 and NA is effective population sizes of the corresponding populations CET, HIL, SOE and the ancestral population; μ_{mic} , the mean mutation rate of SSR; p_{mic} , the mean distribution of the number of repeats of microsatellites; sn_{mic} , the mean rate of single nucleotide insertions/deletions; relative median absolute error values based on 500 pseudo-observed datasets.
