Table S2. Demonstration of genetic differences between populations. **Hs:** Heterozygosity, **Ks:** Synonymous Substitution Rate, **Kxy:** Non-synonymous Substitution Rate, **Gst:** Genetic Differentiation, **DeltaSt:** Total Genetic Differentiation, **GammaSt:** Net Genetic Differentiation, **Nst:** Number of Subpopulations, **Fst:** Fixation Index, **Dxy:** Average Pairwise Nucleotide Difference, **Da:** Net Nucleotide Substitution Rate.

Population 1	Population 2	Hs	Ks	Kxy	Gst	Delta St	GammaSt	Nst	Fst	Dxy	Da
DLYDAL	EMED	0,42188	0,43688	0,48764	0,07921	0,00005	0,08343	0,1689	0,16889	0,00061	0,0001

Table S3. Presents Bayesian estimates of the contribution of stranded individuals from Western Türkiye, Dalyan-Dalaman, and the Eastern Mediterranean to Mediterranean stocks. The management units (MUs) referenced are TKW (Western Türkiye), DLYDAL (Dalyan-Dalaman), and EMED (Eastern Mediterranean, including Middle and Eastern Türkiye, Cyprus, Israel, and Lebanon), as defined by Shamblin et al. (2014). The "Stock" column indicates the locations where the stranded individuals were found. The acronyms used for these locations are as follows: CAL (Calabria), CRT (Crete), CYP (Cyprus), DLY (Dalyan), DAL (Dalaman), ISR (Israel), LEB (Lebanon), MIS (Misurata), SIR (Sirte), TKE (eastern Türkiye), TKM (middle Türkiye), TKW (western Türkiye), WGR (western Greece). The higher contributions were given as bold in the Table. The color of the stocks refers to the different units described by Shamblin et al. (2014).

TKW					DLYDAL					EMED				
Stock	Mean	SD	2.5%	97.5%	Stock	Mean	SD	2.5%	97.5%	Stock	Mean	SD	2.5%	97.5%
