Supplementary Material

1. Supplementary Figures

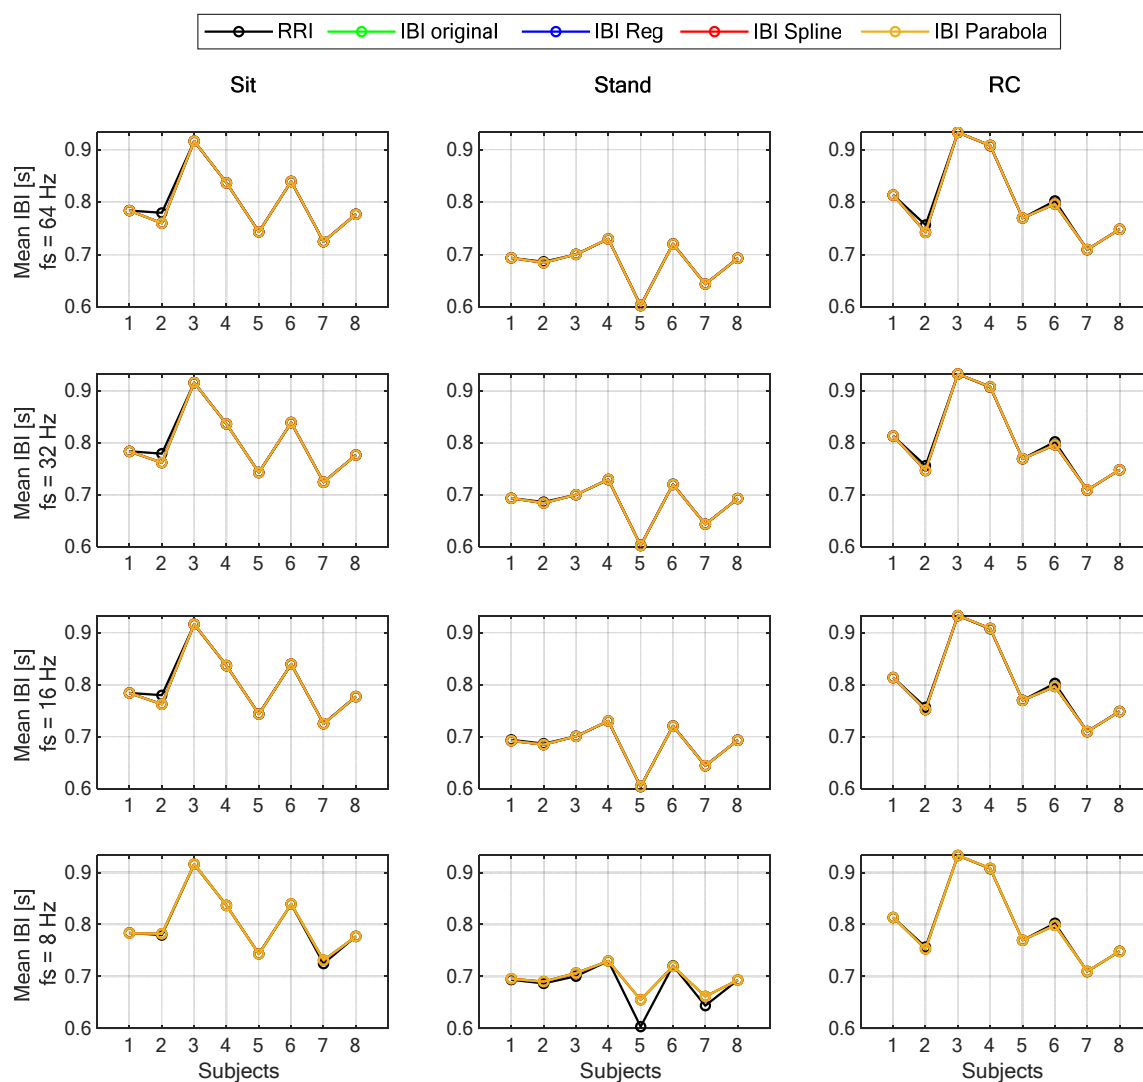

Figure S1. Line charts of the mean RRI and IBI estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

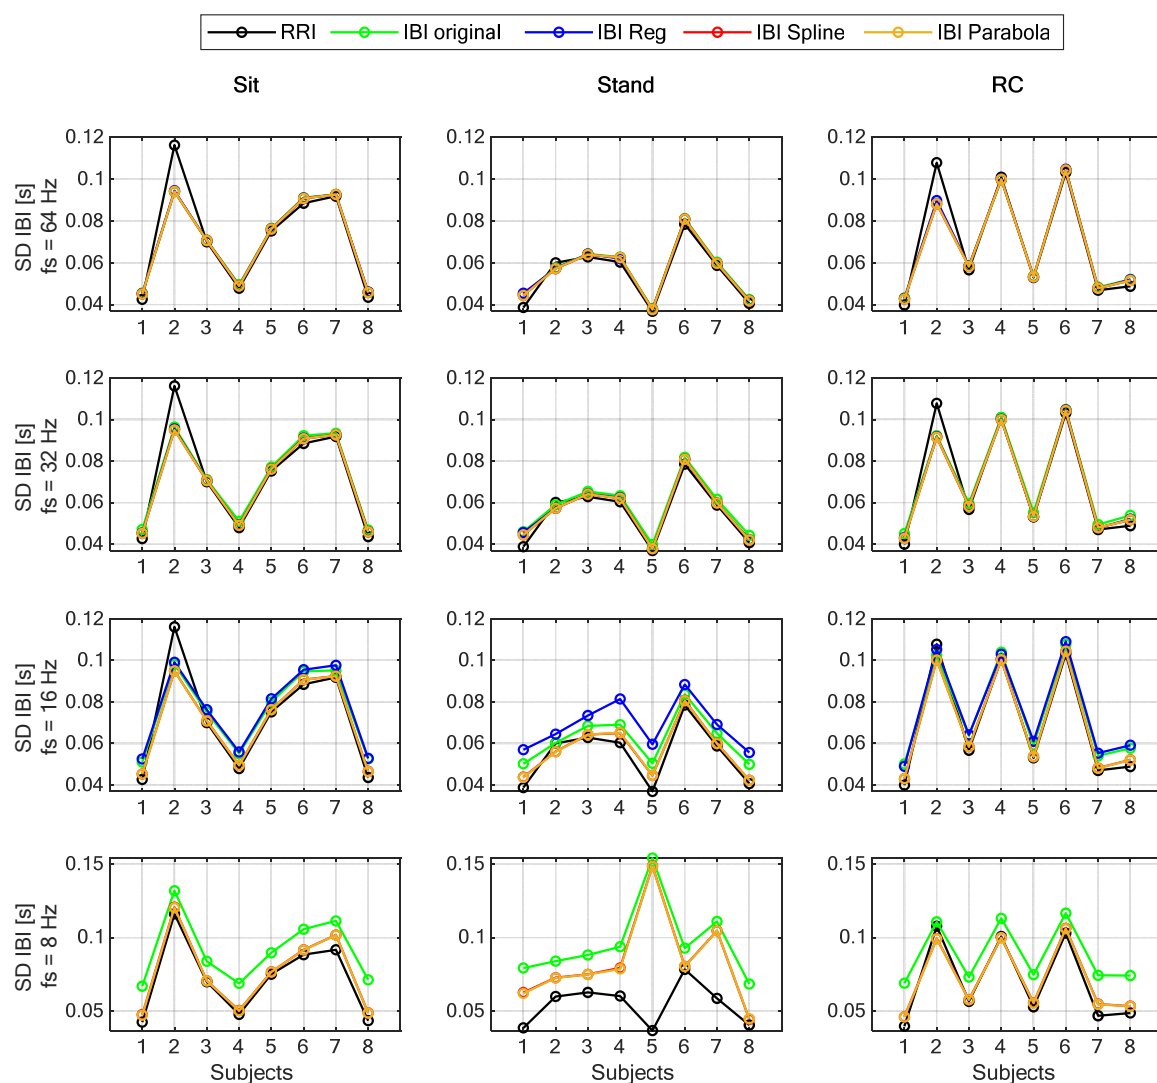

Figure S2. Line charts of the RRI and IBI standard deviation estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

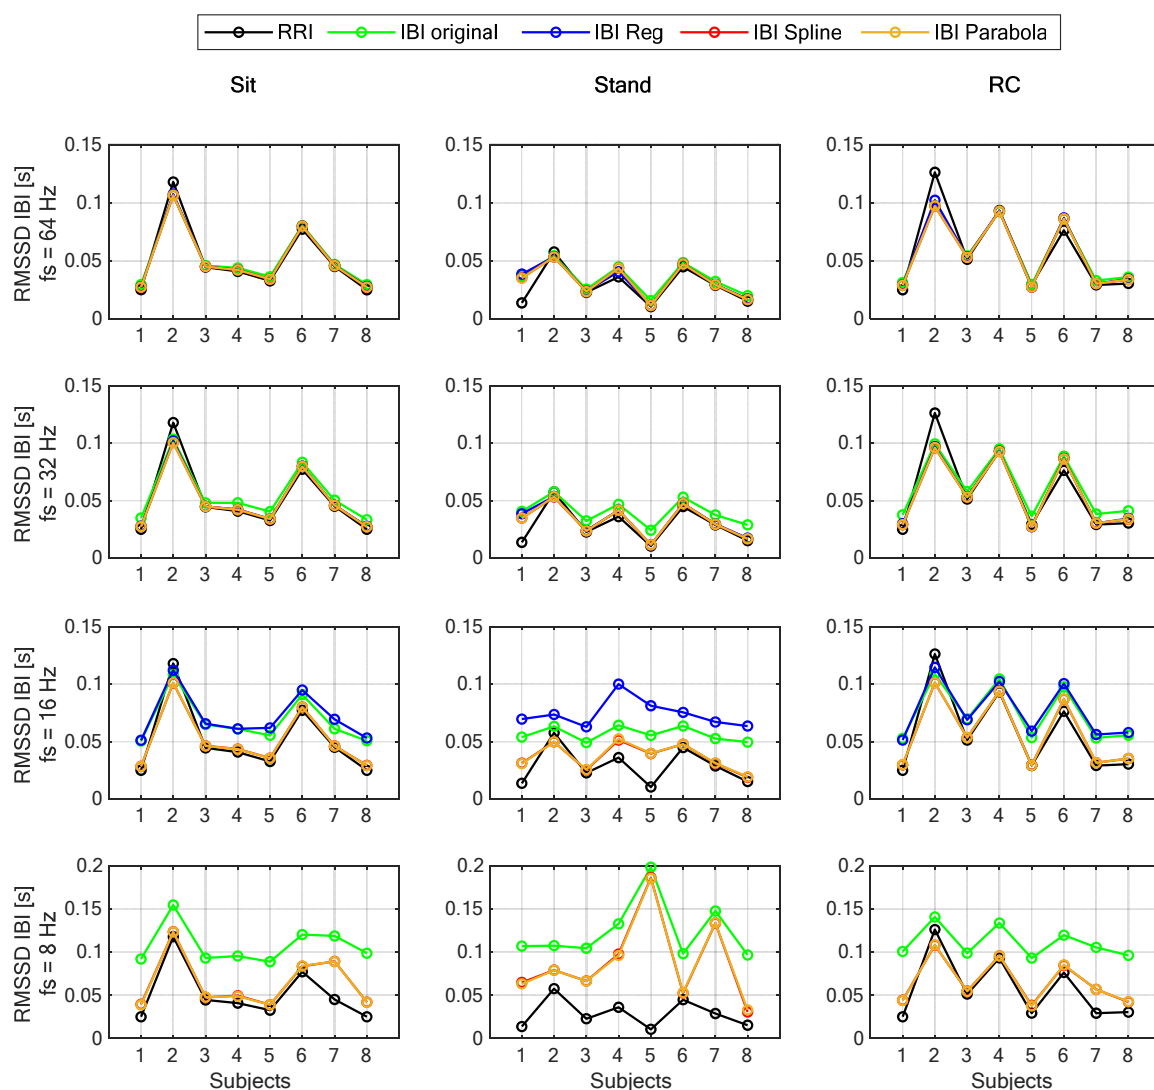

Figure S3. Line charts of the root mean square of successive differences (RMSSD) of the RRIs and IBIs estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

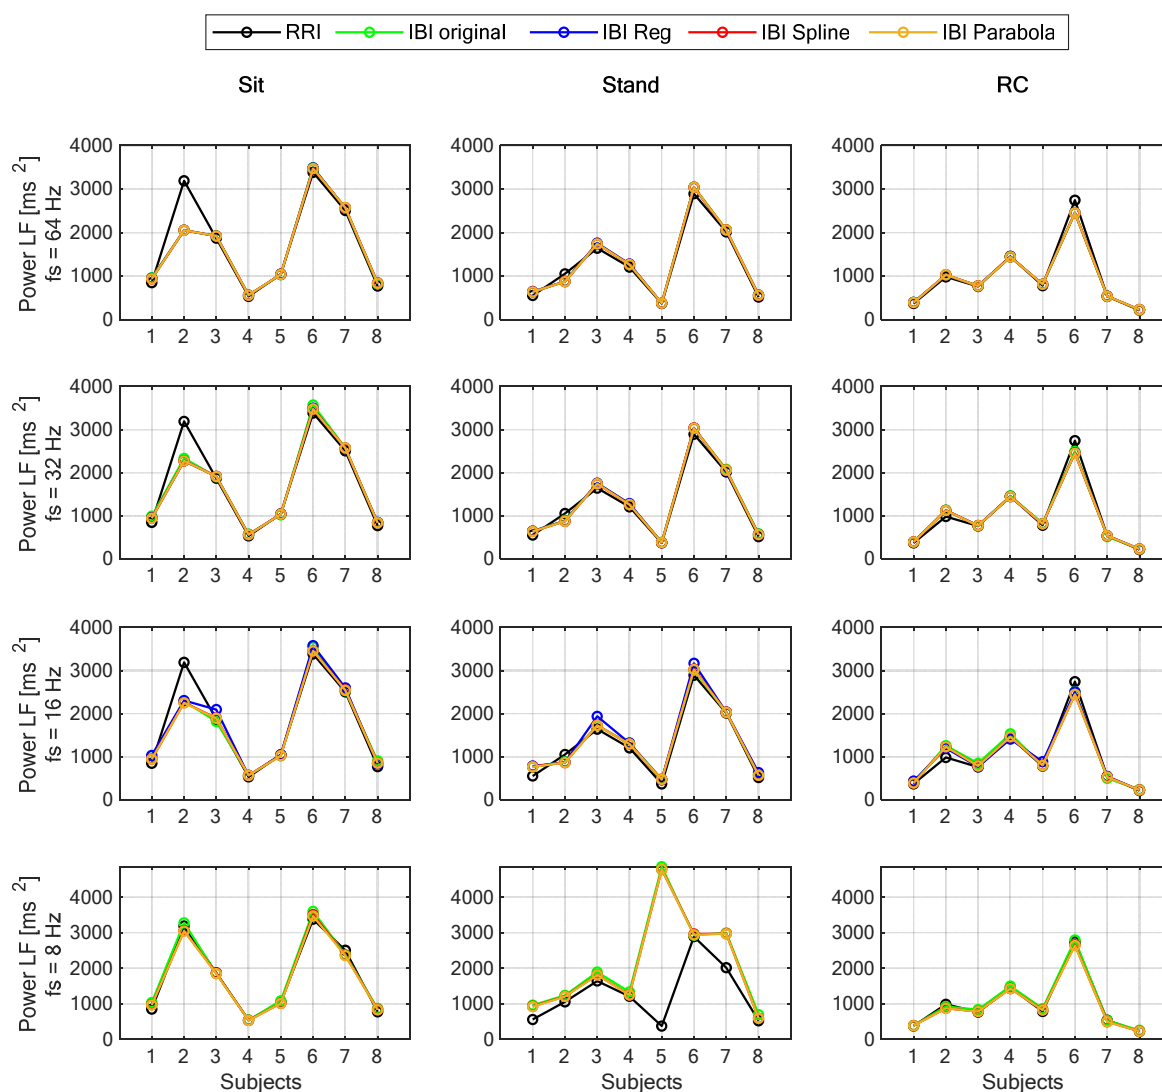

Figure S4. Line charts of the power in the LF band estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

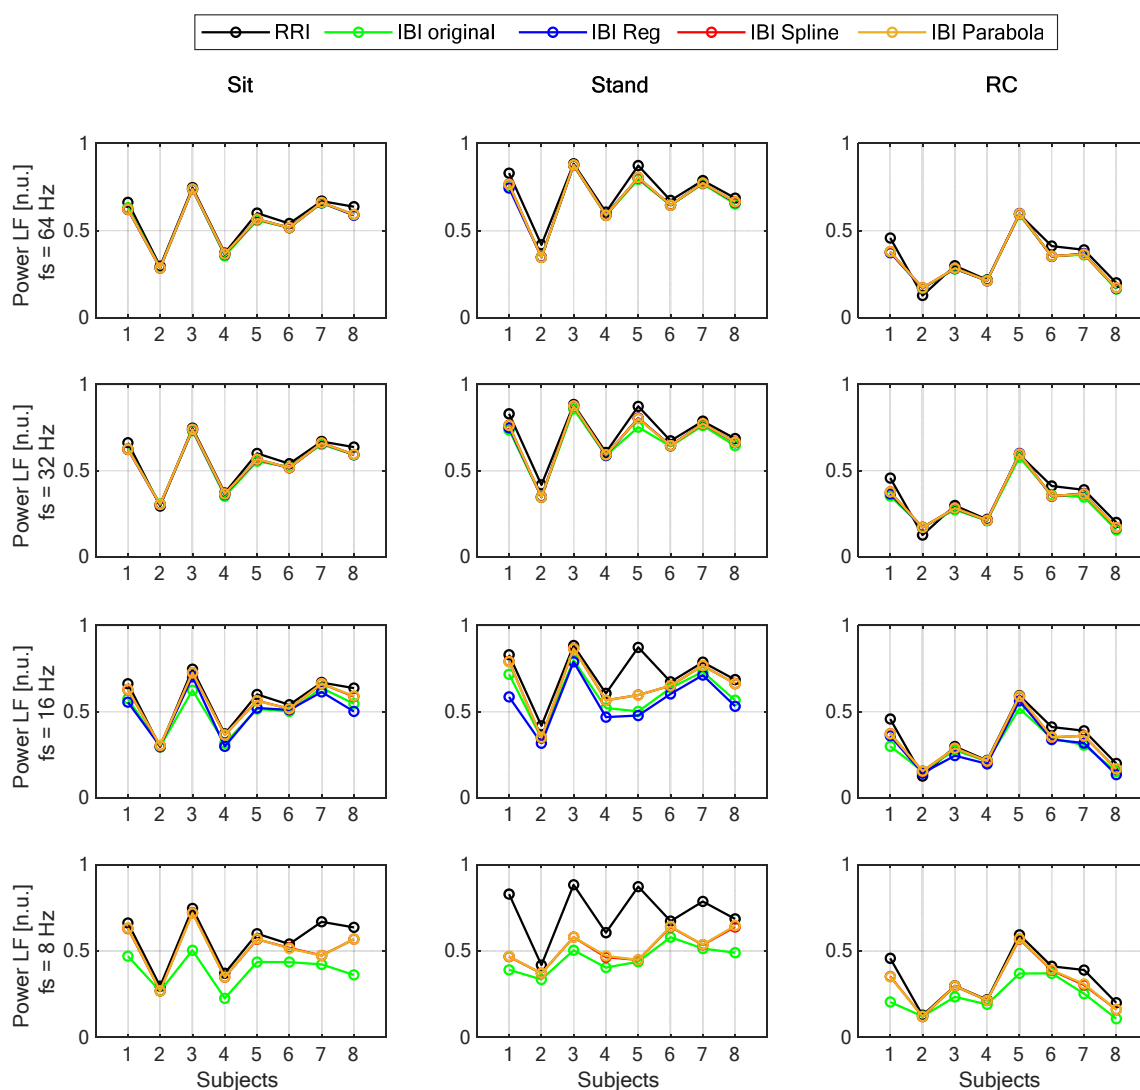

Figure S5. Line charts of the normalized power in the LF band estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

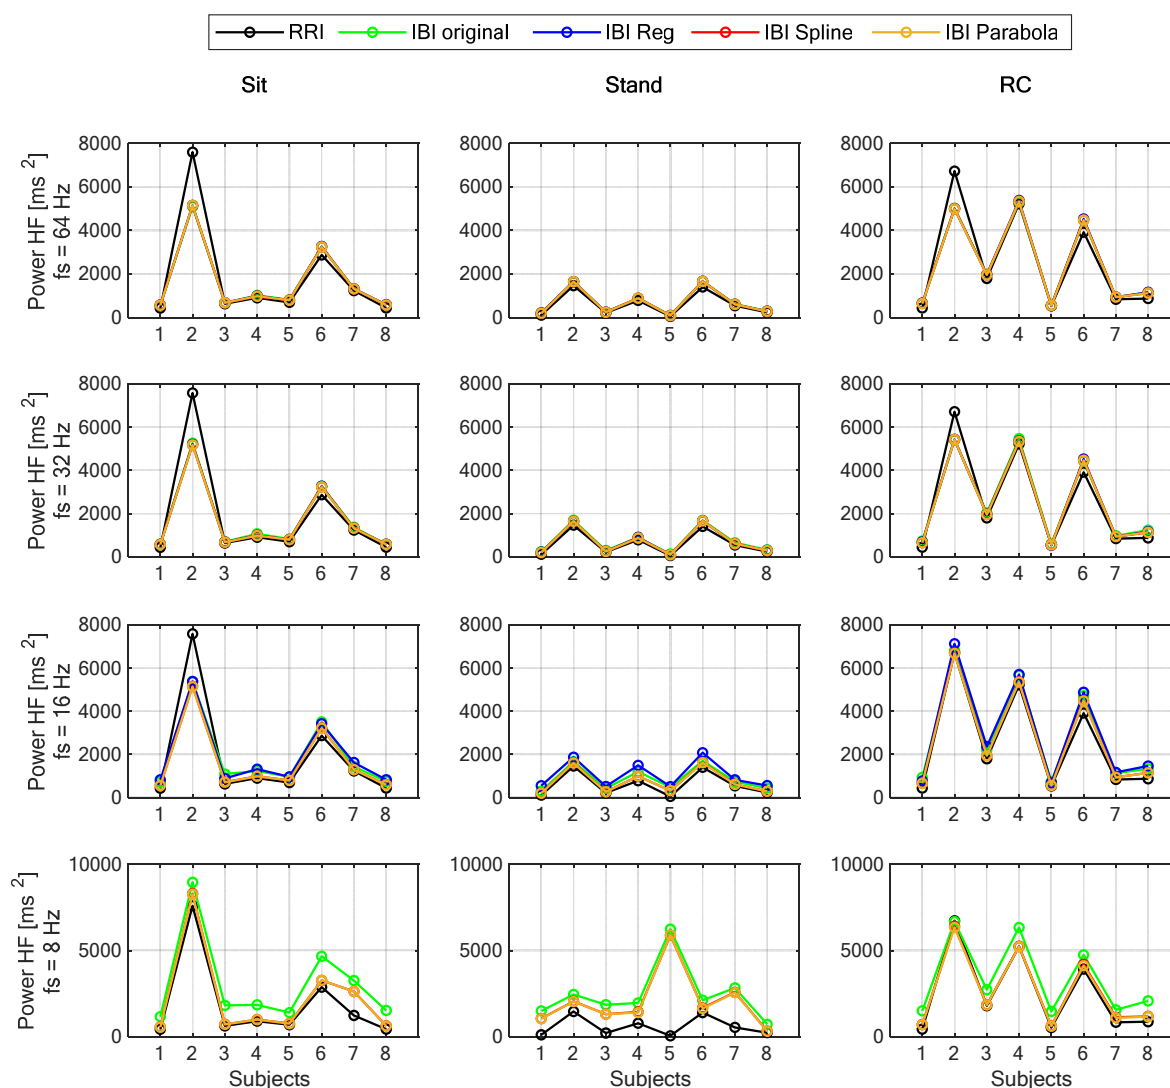

Figure S6. Line charts of the power in the HF band estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

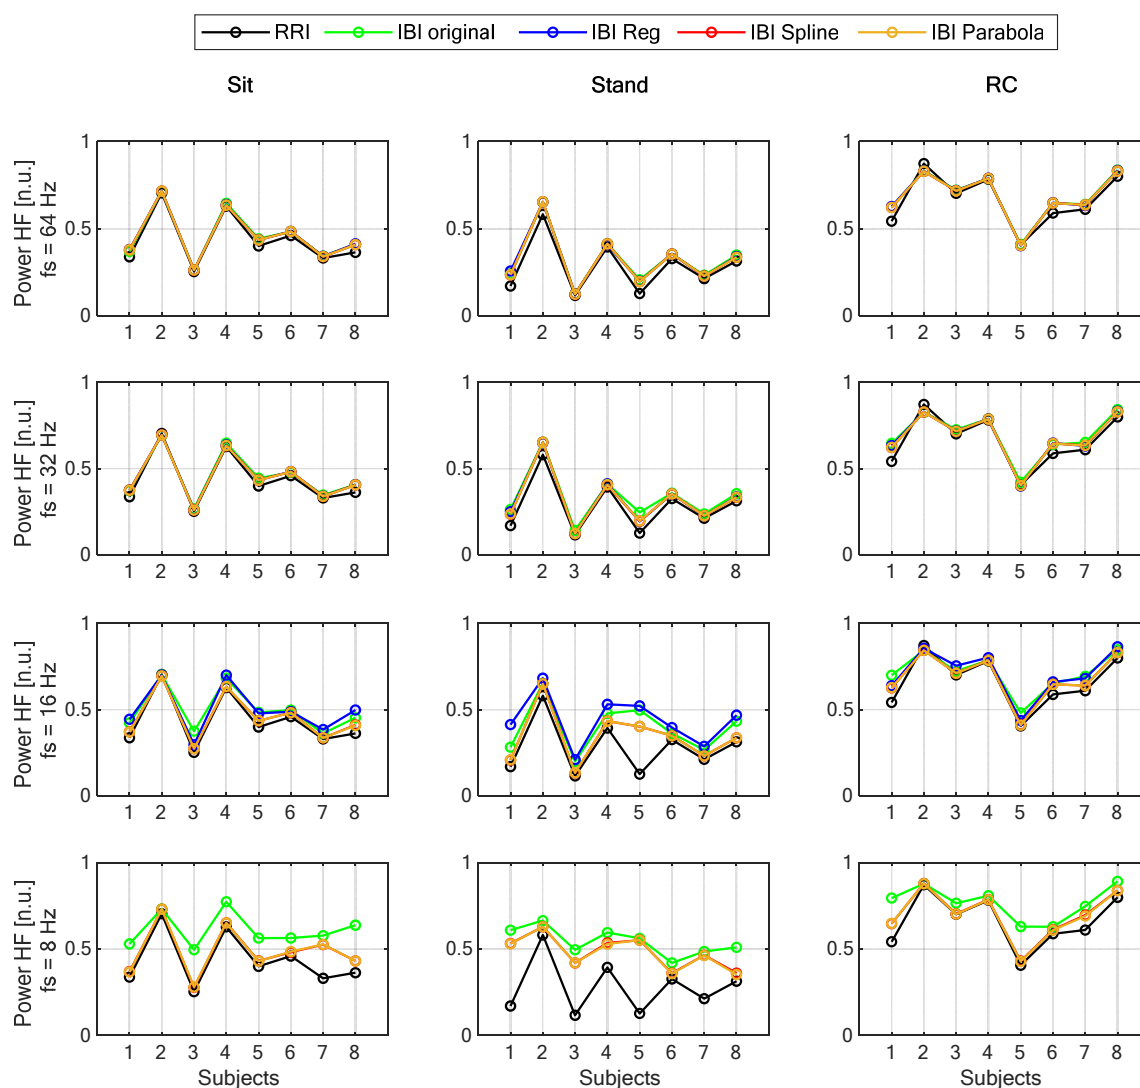

Figure S7. Line charts of the normalized power in the HF band estimated for each subject with the considered PPG interpolation methods, grouped by protocol phase and sampling frequency. As explained in the paper, the REG method could not be applied to PPG signals subsampled at 8 Hz; thus, none of the HRV indices was computed for the REG approach at this frequency.

2. Supplementary Tables

Table S1. FNR, FDR and accuracy observed with each method, grouped by protocol phases. Assessments performed with PPG signals sampled at 32, 16 and 8 Hz.

		FNR (%)		FDR (%)		ACCURACY (%)	
		SLOPE	ENVELOPE	SLOPE	ENVELOPE	SLOPE	ENVELOPE
32 Hz	Sit	0.21	0	0	0.29	99.79	99.71
	Stand	0.57	0	0.04	0.04	99.40	99.96
	CR	0.33	0	0.04	0.25	99.63	99.75
16 Hz	Sit	0.21	0	0	0.29	99.79	99.71
	Stand	0.89	0.04	0	0.07	99.11	99.89
	CR	0.37	0.04	0	0.21	99.63	99.75

	CR	0.83	0.08	0	0.17	99.17	99.75

Table S2. Median absolute error (MAE) and error interquartile range (IQR) of the time-domain HRV indices estimated for each PPG sampling frequency (FS), interpolation method (REG, SPLINE, PARABOLA), and protocol condition (Sit, Stand, CR). ORIGINAL rows refer to the indices estimated from non-interpolated PPG signals.

a. Significantly different from ORIGINAL (Bonferroni-corrected comparisons, $p < 0.05$), with effect size (r) > 0.5 .

Table S3. Median absolute error (MAE) and error interquartile range (IQR) of the frequency-domain HRV indices estimated for each PPG sampling frequency (FS), interpolation method (REG, SPLINE, PARABOLA), and protocol condition (Sit, Stand, CR). ORIGINAL rows refer to the indices estimated from non-interpolated PPG signals. Since absolute errors computed from the normalized LF and HF powers (i.e., *Power LF (n.u.)* and *Power HF (n.u.)*) are equal by definition, their MAE and IQR are shown in the same table column.

		Power LF (ms ²)	Power HF (ms ²)	Power LF or HF (n.u.)	Power LF (ms ²)	Power HF (ms ²)	Power LF or HF (n.u.)
		MAE ± IQR	MAE ± IQR	MAE ± IQR	MAE ± IQR	MAE ± IQR	MAE ± IQR
