

Table S1. Selected *Cannabis sativa* L.-derived cannabinoids, their targets, mechanisms of action, and potential resultant pharmacological effects – Table adapted from (Christensen et al., 2023)

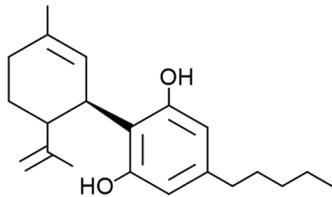

Structures	Targets	Mechanisms of Action	Potential Pharmacological effects
 <p>Δ9-Tetrahydrocannabinol (THC) (2)</p>	CB1	Partial agonist	Analgesic **, *** Anti-convulsant ** Anti-epileptic ** Sleep improvement **, *** Anti-anorectic **, *** appetite stimulating **, *** Anti-emetic **, *** Anxiolytic **
	CB2	Partial agonist	Analgesic **, ***
	GPR55	Agonist	Not reported
	GPR18	Agonist	Not reported
	5-HT-3A	Antagonist	Anti-nociception * Anti- emetic *
	DOR	Negative allosteric modulator	Not reported
	MOR	Negative allosteric modulator	Not reported
	PPAR-γ	Agonist	Anti-cancer, anti-proliferative *, **
	GlyR	Agonist	Analgesic *, **
	TRPV2	Agonist	Not reported
	TRPV3	Agonist	Not reported
	TRPV4	Agonist	Not reported
	TRPA1	Agonist	Not reported
TRPM8	Antagonist	Not reported	

<p style="text-align: center;">Cannabidiol (CBD) (3)</p>  <p style="text-align: center;">Cannabidiol (CBD) (3)</p>	CB1	Negative allosteric modulator Antagonist	THC-related adverse effects modulation **, *** Anxiolytic ** Antidepressant ** Vasorelaxant **
	CB2	Partial agonist Negative allosteric modulator Antagonist	Seizure reduction ** Anti-epileptic ** Anti-inflammatory ** Anti-cancer *, ** Body weight decrease ** Neuroprotection **
	GPR3	Inverse agonist	Alzheimer's disease improvement *
	GPR6	Inverse agonist	Parkinson's disease improvement *
	GPR12	Inverse agonist	Anti-cancer *
	GPR55	Antagonist	Anti-epileptic **, *** Seizure dampening ** Bone resorption inhibition ** Parkinson's motor skills improvement ** Cancer cell migration inhibition
	FAAH	Inhibitor	AEA increase and related effects * Sleep induction *, ** Stress reduction *** Anxiolytic *** Anti-depressant **
	5-HT-1A	Agonist Inverse agonist	Anti-emetic *, ** Analgesic **

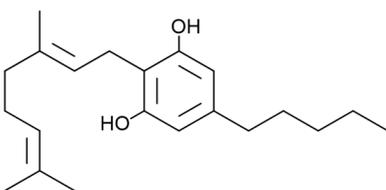

Cannabidiol (CBD) (3)

			Chemotherapy induced neuropathic pain reduction *, ** Anxiolytic ** Anti-depressant ** Cognitive performance improvement ** Anti-epileptic *, **, *** Seizure reduction ** Anti-stress ** Neuroprotection **
	5-HT-3A	Antagonist	Anti-emetic ** Cardiovascular effects **
	A1A	Agonist	Anti-arrhythmic ** Analgesic **
	A2A	Agonist	Anti-inflammatory *, ** Cognitive performance improvement **
	PPAR- γ	Agonist	β -amyloid-induced neuroinflammation reduction *, ** Hippocampal neurogenesis *, ** Alzheimer's disease improvement *, **
	Immune cell (not further specified)	Inhibitor Activator	Anti-inflammatory *, ** Immunosuppressive *, ** Cytokine release reduction/increase *, ** Anti-arthritis ** Multiple sclerosis amelioration **
	Gly- <i>al</i>	Positive allosteric modulator	Anti-inflammatory * Neuroprotective *

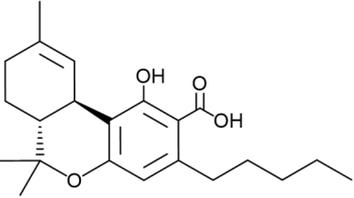

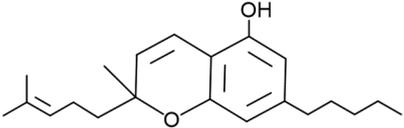

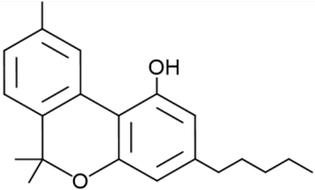

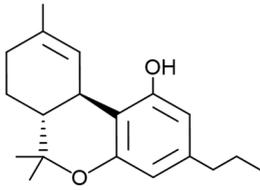

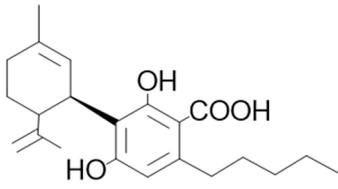

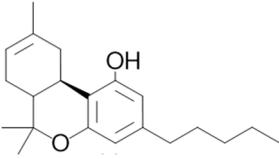

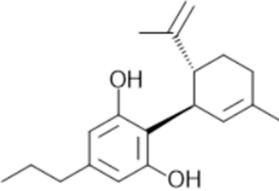

Cannabidiol (CBD) (3)

		Agonist	
	Gly- α 3	Positive allosteric modulator	Analgesic **
	GABA-A	Positive allosteric modulator	Anti-convulsant ** Anti-epileptic **
	TRPV1	Agonist	Neuron anti-hyperexcitability * Anxiolytic ** Anti-cancer, apoptosis * Microglial phagocytosis enhancement * Cardiovascular effects **
	TRPV2	Agonist	Microglial phagocytosis enhancement *
	TRPV3	Agonist	Not report
	TRPV4	Agonist	Not report
	TRPA1	Agonist	Analgesic **
	TRPM8	Antagonist	Not reported
	DOR	Negative allosteric modulator	Not reported
	MOR	Negative allosteric modulator	Not reported
	D2	Partial agonist	Anti-psychotic*
	CB2	Partial agonist	Anti-inflammatory *, ** Colitis attenuation *, **
	AEA uptake	Inhibitory	Various effects related to AEA *
	5-HT-1A	Antagonist	Reverse anti-emetic effect of, <i>e.g.</i> CBD **
	A2A	Agonist	Not reported
	TRPV1	Agonist	Not reported

Cannabigerol (CBG) (4)

	TRPA1	Agonist	Not reported
	TRPM8	Antagonist	Colon anti-cancer **
Δ9-Tetrahydrocannabinolic acid (THCA) (5)	CB1	Partial agonist	Anti-nociceptive ** Anti-inflammatory
	CB2	Agonist	Not reported
Δ9-Tetrahydrocannabinolic acid (THCA) (5)	PPAR- γ	Agonist	Adiposity reduction ** Metabolic syndrome prevention ** Anti-inflammatory ** Neuroprotective *, **
	CB2	Agonist	Anti-inflammatory *
	AEA uptake	Inhibitor	Various effects related to AEA *
Cannabichromene (CBC) (6)	TRPV3	Agonist	Not reported
	TRPV4	Agonist	Not reported
	TRPA1	Agonist	Anti-inflammatory ** Colitis reduction ** Analgesic **
	TRPM8	Antagonist	Not reported
	CB1	Agonist	Appetite increase **
Cannabinol (CBN) (7)	CB2	Inverse agonist	Not reported
	TRPA1	Agonist	Not reported
	TRPM8	Antagonist	Not reported
	CB1	Agonist Antagonist	Anti-psychoactive (e.g. reverse THC-induced psychoactive effects) ** Analgesic ** Anti-convulsant ** Anti-epileptic * Hypophagia and weight reduction ** Glycemic control improvement **, ***
Δ8-Tetrahydrocannabivarin (THCV) (8)			

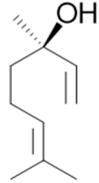

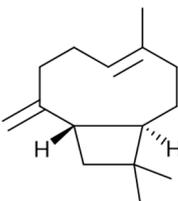

<p style="text-align: center;">Δ^8-Tetrahydrocannabivarin (THCV) (8)</p>	CB2	Partial agonist Antagonist	Anti-inflammatory ** Inflammatory pain reduction **
	5-HT-1A	Agonist	Antipsychotic *, **
	TRPV2	Agonist	Not reported
	TRPA1	Agonist	Not reported
	TRPM8	Antagonist	Not reported
 <p style="text-align: center;">Cannabidiolic acid (CBDA) (9)</p>	CB2	Partial agonist	Not reported
5-HT-1A	Agonist	Anti-emetic ** Anti-convulsant ** Anxiolytic **	
TRPV1	Agonist	Anti-heperalgesic **	
 <p style="text-align: center;">Δ^8-Tetrahydrocannabinol (THC) (11)</p>	CB1	Partial agonist	Appetite stimulant **
CB2	Agonist	Not reported	
 <p style="text-align: center;">Cannabivarin (CBDV) (24)</p>	GABA-A	Positive allosteric modulator	Anticonvulsive *, *** Anti-epileptic *, ***
TRPV1	Agonist	Neuronal anti-heperexcitability * Anti-convulsant **	
TRPV2	Agonist	Not reported	
TRPV3	Agonist	Not reported	
TRPA1	Agonist	Not reported	

*: Pre-clinical *in vitro* study; **: pre-clinical *in vivo* study; ***: clinical study; N.B.: This table is non-exhaustive, broadly elucidating selected compounds and some of their potential pharmacological effects currently present in the pre-clinical literature. Depending on study parameters, the compounds show differing, sometimes biphasic, affinities and effects at different targets, thus highlighting the contradictory and equivocal evidence state. **Abbreviations:** 5-hydroxytryptamine receptor 1A (5-HT-1A); 5-hydroxytryptamine receptor 3A (5-HT-3A); adrenergic receptor alpha-1 (A1A); adrenergic receptor alpha-2 (A2A); anandamide endocannabinoid (AEA); cannabinoid receptor 1 (CB1); cannabinoid receptor 2

(CB2); delta-opioid receptor (DOR); dopamine D2 receptor (D2); fatty acid amide hydrolase enzyme (FAAH); gamma-aminobutyric acid type A receptor (GABA-A); glycine receptor (GlyR); glycine receptor type $\alpha 1$ (GlyR- $\alpha 1$); glycine receptor type $\alpha 3$ (GlyR- $\alpha 3$); G-protein-coupled receptor 2 (GPR2); G-protein-coupled receptor 3 (GPR3); G-protein-coupled receptor 6 (GPR6); G-protein-coupled receptor 12 (GPR12); G-protein-coupled receptor 18 (GPR18); G-protein-coupled receptor 55 (GPR55); Mu-opioid receptor (MOR); peroxisome proliferator-activated receptor gamma (PPAR- γ); transient receptor potential cation channel type A1 (TRPA1); transient receptor potential cation channel 8 (TRPM8); transient receptor potential vanilloid type 1 (TRPV1); transient receptor potential vanilloid type 2 (TRPV2); transient receptor potential vanilloid type 3 (TRPV3); transient receptor potential vanilloid type 4 (TRPV4).

Table S2. Selected *Cannabis sativa* L.-derived terpenes, their targets, mechanisms of action, and potential resultant pharmacological effects. Table adapted from (Christensen et al., 2023)

Structures	Targets	Mechanisms of Action	Potential Pharmacological effects
 <p>Myrcene (14)</p>	TRPV1	Agonist	Analgesic *
	A2A	Agonist	Analgesic **
 <p>Limonene (17)</p>	5-HT-1A	Agonist	Anti-stress ** Anxiolytic ** Anti-depressant **
	TRPA1	Agonist	Analgesic **
	NF κ B	Inhibitor	Anti-inflammatory **, *** Analgesic ** Colitis reduction **
	A2A	Agonist	Not reported
	FTase	Inhibitor	Anti-cancer **
	MAPK NF κ B	Inhibitor	Anti-inflammatory **
	ERK/AKT	Agonist	Anti-cancer *, **
	Virus particle (not further specified)	Inhibitor	Anti-viral *
		A1A	Agonist
	A2A	Agonist	Analgesic **
	GABA-A	Agonist	Anxiolytic **

 <p>Linalool (20)</p>	Cancer cell (not further specified)	Inhibitor	Anti-cancer *, **
 <p>Caryophyllene (21)</p>	CB2	Agonist	Analgesic ** Chemotherapy-induced peripheral neuropathy attenuation ** Anti-inflammatory** Steatohepatitis protecting ** Metabolic dysregulation attenuation **
	PPAR- α	Agonist	Intracellular lipid modification* Steatohepatitis protecting*
	PPAR- γ	Agonist	Intracellular lipid modification* Steatohepatitis protecting*
	MAPK	Inhibitor Agonist	Chemotherapy-induced peripheral neuropathy attenuation ** Anti-cancer *
	TLR4	Inhibitor	Microglial activation inhibition ** Neuroprotective *, ** Anti-inflammatory *, **

* Pre-clinical *in vitro* study. ** Pre-clinical *in vivo* study. *** Clinical study. N.B.: This table is non-exhaustive, broadly elucidating selected compounds and some of their potential pharmacological effects currently present in the pre-clinical literature. Depending on study parameters, the compounds show differing, sometimes biphasic, affinities and effects at different targets, thus highlighting the contradictory and equivocal evidence state. **Abbreviations:** 5-hydroxytryptamine receptor 1A (5-HT-1A); adrenergic receptor alpha-1 (A1A); adrenergic receptor alpha- 2 (A2A); cannabinoid receptor 2 (CB2); Extracellular-regulated kinase/serine/threonine kinase (ERK/AKT); farnesyltransferase (FTase); gamma-aminobutyric acid type A receptor(GABA-A); mitogen-activated protein kinase (MAPK); Nuclear factor kappa B (NF κ B); peroxisome proliferator-activated receptor alpha/gamma (PPAR- α/γ); Toll-like receptor 4 (TLR4); transient receptor potential cation channel type A1 (TRPA1); transient receptor potential vanilloid type 1 (TRPV1).
