

Antibacteric assay of the in-house library of Marine Natural Products on five strains on three Gram + (*Staphylococcus aureus*; *Enterococcus faecalis* and *Streptococcus agalactiae* group B) and two Gram – (*Escherichia coli* and *Pseudomonas aeruginosa*). The bacterial inocula were treated with 50 µg/mL of either extracts (X) or its related SPE fractions (B-E). Results were measured as OD at 600 nm after 24 h of incubation. When the OD average was under 0.05, a value comparable to those obtained in the negative controls (not inoculated), the sample was considered active (A); when the OD average was between 0.05 and under 0,09, the sample was considered weakly active (WA); over these values, was considered non active (-).

Identification code	Gram +			Gram -	
	<i>S. aureus</i>	<i>E. faecalis</i>	<i>S. agalactiae</i>	<i>E. coli</i>	<i>P. aeruginosa</i>
