

Supplementary material S1

- In order to state that there were statistically significant differences in the increase of GTX2/3 and GTX5, and the decrease of GTX1/4.

Table S1. Changes in the content of GTX1/4, GTX2/3, and GTX5 with treatments at 0 h, 3 h, and 12 h. CK—control algae untreated; A—algae treated with 0.5% (v/v) *B. subtilis* S3 bacterial culture; B—algae treated with 0.5% (v/v) bacterial resuspension; C—algae treated with 0.5% (v/v) sterile supernatant; D—algae treated with 0.5% (v/v) LB liquid medium.

Note: Data represent the mean + SD of triplicate measurements (n = 3). One-way ANOVA is used to analyze the difference between the control group and treatment groups, “*” indicates a significant difference ($p < 0.05$), and “**” indicates an extremely significant difference ($p < 0.01$).
