Supplemental Table S2. Parameters for the assessment of these models (Type: the multivariate statistical analysis model was established, PRE: the number of principal components, ORT: the number of orthogonal components, N: the number of samples, R²X (cum): the square of the percentage of row data retained in the X-axis direction, Cum: the cumulative result of several principal components, R²Y: the square of the percentage of row data retained in the X-axis direction, Q² (cum): the cumulative prediction rate of the model, R² and Q²: the parameter of the response sequencing test used to measure whether the model was overfitted)

| group | type | PRE | ORT | N | R ² X (cum) | R ² Y (cum) | Q ² (cum) | R ² | Q ² |
|---------------|------|-----|-----|----|---------------------------|---------------------------|-------------------------|----------------|----------------|
