

RefID: 1, There and Back Again: A Review of Residency and Return Migrations in Sharks, with Implications for Population Structure and Management. Chapman DD, Feldheim KA, Papastamatiou Y, Hueter RE

The overexploitation of sharks has become a global environmental issue in need of a comprehensive and multifaceted management response. Tracking studies are beginning to elucidate how shark movements shape the internal dynamics and structure of populations, which determine the most appropriate scale of these management efforts.

Tracked sharks frequently either remain in a restricted geographic area for an extended period of time (residency) or return to a previously resided-in area after making long-distance movements (site fidelity). Genetic studies have shown that some individuals of certain species preferentially return to their exact birthplaces (natal philopatry) or birth regions (regional philopatry) for either parturition or mating, even though they make long-distance movements that would allow them to breed elsewhere. More than 80 peer-reviewed articles, constituting the majority of published shark tracking and population genetic studies, provide evidence of at least one of these behaviors in a combined 31 shark species from six of the eight extant orders.

Residency, site fidelity, and philopatry can alone or in combination structure many coastal shark populations on finer geographic scales than expected based on their potential for dispersal. This information should therefore be used to scale and inform assessment, management, and conservation activities intended to restore depleted shark populations. Expected final online publication date for the Annual Review of Marine Science Volume 7 is January 03, 2015.

1. Was the target population explicitly stated or did you have to assume what it was?

Stated target population

had to assume target population

2. Which of the following is true regarding the sample of the study

- entire target population
- randomly selected sample
- convenience sample
- sample stated as representative of target population
- not reported

3. Which of the following applies with regards to responders and nonresponders

- reasons for non responders described
- described non responders
- compared responders and non responders
- compared sample and target population
- not reported

4. What was the response rate?

≥ 90%

70-90%

≤ 70%

not reported

5. Was data primary from a prevalence study or pulled from a survey designed for another purpose?

prevalence study

another design

not reported

6. Was the same mode of data collection used for all participants?

Yes

No

7. Were the data collected directly using a validated scale?

 Yes No validated scale was used data collected from proxies or retrospectively from medical records not reported

8. Was there a description of the study population and setting that the participants were sampled from?

 Yes No

9. Was there a description of the gender and age of participants?

 Yes No

10. Did they report the final sample size or the number of participants that were analyzed?

 Yes No

11. report number of participants classified as having depression as a number rather than a percentage of their sample.

 Yes No
