

Supplementary Materials

Table S1. Correlations between logistic regression predictor variables.

Figure S1. Plots of relationships of all covariates with occurrence of breathing difficulties. Lines are Lowess smooth curves.

Table S1. Matrix of correlations for variables entered in logistic regression analysis.

Variables	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
(1) bed co-sleep	1.000										
(2) Breast fed	0.051	1.000									
(3) Hosp. stay	-0.024	-0.017	1.000								
(4) Infant sex	-0.023	0.004	0.013	1.000							
(5) Birthweight	-0.023	0.028	0.145	-0.106	1.000						
(6) Income score	-0.104	0.249	-0.001	0.003	0.082	1.000					
(7) Mo. Birth yr.	-0.041	0.226	0.007	0.010	0.061	0.348	1.000				
(8) Inf. n. illness	0.009	0.015	-0.021	-0.053	-0.022	0.035	-0.031	1.000			
(9) Mother educ.	-0.013	-0.238	0.022	-0.010	-0.038	-0.343	-0.259	-0.015	1.000		
(10) Dad absent	-0.093	0.174	0.003	0.007	0.063	0.321	0.290	-0.001	-0.128	1.000	
(11) Singleton	-0.021	-0.020	-0.078	0.020	-0.193	-0.015	0.050	-0.012	-0.013	0.020	1.000

Y=1, breathing difficulty reported. Y=0, no breathing difficulty

Figure S1. Plots of covariates with occurrence of breathing difficulties.
